## MuleSoft Certified Developer - Level 1 (Mule 4) Sample Questions (Q144-Q149):

### NEW QUESTION # 144

Refer to the exhibit. The main flow contains an HTTP Request in the middle of the flow. The HTTP Listeners and HTTP request use default configurations.

What values are accessible to the Logger at the end of the flow after a web client submit request to `http://local:801/order?color=red`?

- A. payload color query param
- B. payload quantity var color query param
- C. payload quantity var
- D. payload

**Answer: C**

Explanation:

Correct answer is as below. Query parameters are replaced when external HTTP call is invoked.

payload

producer var

### NEW QUESTION # 145

From which application, Organization Administrators can approve/revoke/delete SLA tier access requests

- A. API Exchange
- B. API Portal
- C. API Manager
- D. API Gateway

**Answer: C**

Explanation:

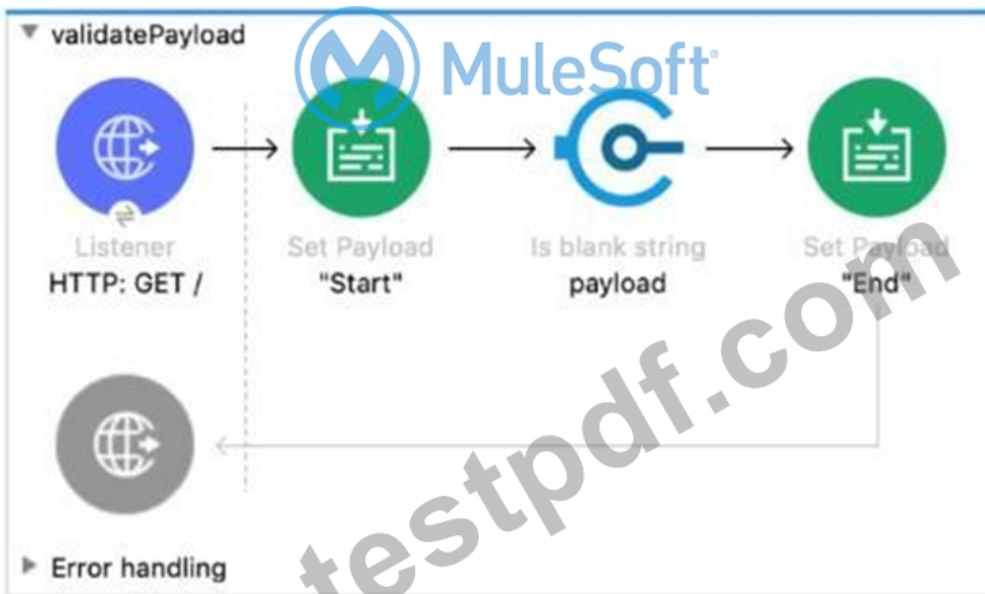

Organization Administrators can approve/revoke/delete SLA tier access requests via API Manager only

### NEW QUESTION # 146

Refer to the exhibits.

A web client sends a GET request to the HTTP Listener.

What response message is returned to the web client?

```
<flow name="validatePayload" >
  <http:listener doc:name="HTTP: GET /" config-ref="HTTP_Listener_config" path="/" />
  <set-payload value="Start" doc:name="'Start'" />
  <validation:is-blank-string doc:name="payload" value="#[payload]" />
  <set-payload value="End" doc:name="'End'" />
</flow>
```

- A. "Start"
- B. ""
- C. "String is not blank"
- D. "End"

Answer: C

NEW QUESTION # 147

Refer to the exhibits.

The top part of the image shows a MuleSoft flow diagram for 'getFlights'. It starts with a 'Listener' (HTTP: GET /flights), followed by a 'Set Payload' component 'Set to XML', and then a 'Transform Message' component 'typeOf(payload)'. Below the flow is an 'Error handling' section. The bottom part of the image shows the configuration panel for the 'Set to XML' component. It includes a 'Display Name' field set to 'Set to XML' and a 'Settings' section with an XML payload: <ns2:listAllFlightsResponse xmlns:ns2="http://soap.training.mulesoft.com"><return></return></ns2:listAllFlightsResponse>. There are also dropdown menus for 'Encoding' and 'MIME Type'.

```

<flow name="getFlights" >
  <http:listener doc:name="HTTP: GET /Flights" config-ref="HTTP_listener_config" path="/flights"/>
  <set-payload value="<ns2:listAllFlightsResponse xmlns:ns2="http://soa01.training.mulesoft.com/">
    <return>
      <airlineName>Delta</airlineName>
      <code>A182C381</code>
      <departureDate>2015/03/20</departureDate>
    </return>
  </ns2:listAllFlightsResponse>" doc:name="Set to XML" />
  <ee:transform doc:name="typeOf(payload)" doc:id="4189508-15e2-4cb7-8d0b-bd9c2929209e" >
    <ee:message><ee:set-payload ><[[CDATA[<pre>
output application/json
---
typeOf(payload)]]></ee:set-payload
</ee:message>
</ee:transform>
</flow>

```

A web client submits a request to `http://localhost:8081 /flights`. What is the result at the end of the flow?

- A. "object"
- B. "XML"
- C. "string"
- D. "Java"

**Answer: C**

### NEW QUESTION # 148

A mule project contains MySQL database dependency . The project is exported from Anypoint Studio so that it can be deployed to Cloudhub. What export options needs to be selected to create the smallest deployable archive that will successfully deploy to Cloudhub?

- A. Select both the options 1) Attach project sources 2) Include project module and dependencies
- B. No need to select any of the below options 1) Attach project sources 2) Include project module and dependencies
- C. Select only below option 2) Include project module and dependencies
- D. Select only below option 1) Attach project sources

**Answer: C**

Explanation:

You can choose Attach Project Sources to include metadata that Studio requires to reimport the deployable file as an open Mule project into your workspace. You must keep the Attach Project Sources option selected to be able to import the packaged JAR file back into a Studio workspace. But requirement here is to create smallest deployable archive that will successfully deploy to Cloudhub. Hence we can ignore this option.

We need to select Include project module and dependencies

As actual modules and external dependencies required to run the Mule application in a Mule runtime engine Hence correct answer is Select only below option 2) Include project module and dependencies MuleSoft Doc Ref:

<https://docs.mulesoft.com/studio/7.5/import-export-packages#exporting-a-studio-project-to-a-deployable-mule-application>
