NEW QUESTION # 194

An administrator made changes in Cisco ISE and needs to apply new permissions for endpoints that have already been authenticated by sending a CoA packet to the network devices. Which IOS command must be configured on the devices to accomplish this goal?

- A. **aaa server radius dynamic-author**
- B. authentication command disable-port
- C. aaa nas port extended
- D. authentication command bounce-port

Answer: A

NEW QUESTION # 195

The security team identified a rogue endpoint with MAC address 00:46:91:02:28:4A attached to the network. Which action must security engineer take within Cisco ISE to effectively restrict network access for this endpoint?

- A. Create authentication policy to force reauthentication.
- B. **Add MAC address to the endpoint quarantine list.**
- C. Implement authentication policy to deny access.
- D. Configure access control list on network switches to block traffic.

Answer: B

Explanation:

Cisco ISE provides a feature called Adaptive Network Control (ANC) that allows administrators to apply policies to endpoints based on their behavior or status¹. One of the ANC policies is Quarantine, which restricts network access for an endpoint by assigning it to a limited-access VLAN or applying an access control list (ACL) on the switch port². To use the Quarantine policy, the administrator must add the MAC address of the rogue endpoint to the endpoint quarantine list in ISE². This will trigger a change of authorization (CoA) for the endpoint and apply the Quarantine policy. The other options are not effective for restricting network access for a rogue endpoint, as they do not use the ANC feature of ISE.
