Free C_CPI_2506 Practice & Exam C_CPI_2506 Course

We are aimed to develop a long-lasting and reliable relationship with our customers who are willing to purchase our C_CPI_2506 study materials. To enhance the cooperation built on mutual-trust, we will renovate and update our system for free so that our customers can keep on practicing our C_CPI_2506 Study Materials without any extra fee. Meanwhile, to ensure that our customers have greater chance to pass the C_CPI_2506 exam, we will make our C_CPI_2506 test training keeps pace with the digitized world that change with each passing day.

SAP C_CPI_2506 Exam Syllabus Topics:

Topic	Details

Topic 1	<ul style="list-style-type: none"> • SAP Integration Suite Overview: This section of the exam measures the skills of Integration Consultants and covers the foundational concepts of the SAP Integration Suite. It provides an understanding of the suite's capabilities, its role in connecting applications, and its relevance in modern cloud-based integration scenarios.
Topic 2	<ul style="list-style-type: none"> • Managing APIs: This section of the exam measures the skills of Solution Architects and focuses on managing APIs within the SAP ecosystem. It covers topics such as API provisioning, lifecycle management, security policies, and monitoring, ensuring candidates can handle APIs effectively for enterprise integration needs.
Topic 3	<ul style="list-style-type: none"> • Implementing Cloud Integration: This section of the exam measures the skills of Integration Consultants and examines how cloud integration flows are designed and deployed. It emphasizes creating integration scenarios, handling connectivity, and applying best practices to build efficient, secure, and reliable integration processes in SAP's cloud environment.
Topic 4	<ul style="list-style-type: none"> • SAP Event Mesh: This section of the exam measures the skills of Solution Architects and centers on using SAP Event Mesh to support event-driven integration. It highlights the importance of asynchronous communication, event publishing, and subscription models, allowing organizations to build scalable and decoupled systems.

SAP Certified Associate - Integration Developer Sample Questions (Q47-Q52):

NEW QUESTION # 47

Which architectural pattern in an event-driven architecture allows direct communication between two parties without an intermediary?

- A. Message Queue
- B. Publish-Subscribe
- **C. Point-to-Point**
- D. Event Sourcing

Answer: C

Explanation:

References

In an event-driven architecture (EDA), several messaging patterns exist:

Point-to-Point # Enables direct communication between exactly two parties (sender and receiver) without intermediaries.

Publish-Subscribe # Multiple consumers subscribe to events; requires a broker/intermediary (like Event Mesh).

Message Queue # Relies on a queue as an intermediary between producer and consumer.

Event Sourcing # Refers to storing state changes as events, not a communication pattern.

Therefore, the only pattern allowing direct communication without an intermediary is Point-to-Point.

NEW QUESTION # 48

What are the key capabilities of the SAP BTP Integration Suite? Note: There are 2 correct answers to this question.

- **A. Connectivity Service**
- **B. API Management**
- C. Open Connectors
- D. SAP Business Application Studio

Answer: A,B

Explanation:

The key capabilities of the SAP BTP Integration Suite include API Management and Connectivity Service. API Management allows you to create, publish, monitor, and secure APIs across different environments and platforms. Connectivity Service enables you to establish secure and reliable connections between cloud applications and on-premise systems using various protocols and adapters.

NEW QUESTION # 49

To activate the Event Mesh (EMIS) capability in the SAP Integration Suite, which role collections must be assigned to the user performing the activation?

- A. Integration_Administrator and Security_Auditor
- B. API_Manager and Monitoring-Viewer
- C. Process_orchestrator and Subaccount_Viewer
- D. Integration_Provisioner and Subaccount Administrator

Answer: D

Explanation:

To activate Event Mesh (EMIS) capability in SAP Integration Suite, the required role collections are:

Integration_Provisioner # Allows provisioning of new capabilities (including Event Mesh) in Integration Suite.

Subaccount Administrator # Grants permission to manage and configure subaccount-level entitlements and service activations.

Other options:

Integration_Administrator, API_Manager, Monitoring_Viewer # Used for operational tasks, not provisioning.

Process_orchestrator # Refers to on-premise PI/PO, not BTP roles.

Security_Auditor # Auditing role, not activation.

Thus, the correct roles are Integration_Provisioner and Subaccount Administrator.

NEW QUESTION # 50

When does the "Trace" log level expire and when will the log files be re-moved?

- A. Expiration: 15 minutes Removal: After 24 hours
- B. Expiration: 15 minutes Removal: After 10 hours
- C. Expiration: 10 minutes Removal: After 1 hour
- D. Expiration. 10 minutes Removal. After 24 hours

Answer: C

Explanation:

The "Trace" log level expires after 10 minutes and the log files are removed after 1 hour. The "Trace" log level is the most detailed log level that can be set for an integration flow. It records all the information about the message processing, such as headers, properties, payloads, attachments, and exceptions. However, it also consumes more resources and storage space than other log levels. Therefore, it is recommended to use it only for troubleshooting purposes and for a short duration. The "Trace" log level can be activated from the Monitor Message Processing view or from the integration flow editor. Reference: Log Levels | SAP Help Portal, Activating Trace Log Level | SAP Help Portal

NEW QUESTION # 51

Which combination of SAP BTP role collections allows a user to manage queues and topic subscriptions in SAP Event Mesh, and monitor its usage and resources?

- A. ApplicationAdmin and ApplicationDevelop
- B. EventMeshAdmin and EventMeshDevelop
- C. IntegrationAdmin and IntegrationDevelop
- D. SecurityAdmin and SecurityDevelop

Answer: B

Explanation:

In SAP BTP, SAP Event Mesh provides messaging capabilities (queues, topics, and subscriptions) that require specific role collections to enable developers and administrators to perform tasks. SAP delivers two dedicated role collections for Event Mesh: EventMeshDeveloper:

Manages queues and topic subscriptions

Monitors Event Mesh and its queues

EventMeshAdmin:

Provides additional administration rights for lifecycle management of Event Mesh instances and configurations. When a user is assigned these role collections, they gain the ability to:

Monitor usage and resources such as queue depth, consumers, connections, and spool size within Event Mesh.

ApplicationAdmin/ApplicationDevelop # These are not SAP Event Mesh role collections, they do not provide queue or topic subscription access.

IntegrationAdmin/IntegrationDevelop # These roles belong to SAP Integration Suite (Cloud Integration) capability, not Event Mesh.

B). EventMeshAdmin and EventMeshDevelop
