## SCA-C01 Study Demo, SCA-C01 Latest Test Preparation

If you are lack of skills in the preparation of getting the certification, our SCA-C01 study materials are the best choice for you. Many people have successfully realized economic freedom after getting the SCA-C01 certificate and changing a high salary job. So you need to act from now, come to join us and struggle together. Our SCA-C01 Study Materials will help you change into social elite and you will never feel dispointed.

Tableau SCA-C01 exam measures an individual's knowledge of Tableau Server, including installation and configuration, managing users and groups, deploying and publishing data sources and workbooks, and monitoring and maintaining the server. Tableau Server Certified Associate Exam certification exam is a comprehensive assessment of an individual's ability to manage and maintain Tableau Server, and passing the exam is a testament to their expertise in the field.

Tableau SCA-C01 Exam measures the candidate's ability to install, configure, and manage Tableau Server. It also evaluates the candidate's skills in data analysis, visualization, and dashboard creation. SCA-C01 exam covers various topics, including Tableau Server architecture, user management, data sources, security, backup, and restore, among others.

## Tableau Server Certified Associate Exam Sample Questions (Q168-Q173):

**NEW QUESTION # 168**
What is the minimum required free hard disk space recommended for a Tableau Server installation in production?

- A. 50 GB
- B. 64 GB
- C. 15 GB
- D. 32 GB

**Answer: A**

Explanation:
Tableau Server has specific hardware requirements for production environments to ensure stability and performance. The minimum recommended free disk space for a production installation is 50 GB. This accounts for:
* The installation itself (approximately 1-2 GB).
* Space for log files, temporary files, and extracts managed by the File Store and Data Engine.
* Room for backups and operational overhead.
The full minimum hardware recommendations for a single-node production deployment are:
* 8 CPU cores (2.0 GHz or faster).
* 32 GB RAM.
* 50 GB free disk space (on the system drive, typically C: on Windows).
* Option A (32 GB): Incorrect. While 32 GB is the minimum RAM requirement, it's insufficient for disk space in production.
* Option B (50 GB): Correct. This matches Tableau's official recommendation for production environments.
* Option C (15 GB): Incorrect. 15 GB is the minimum for a non-production or trial installation, not production.
* Option D (64 GB): Incorrect. While 64 GB exceeds the minimum, it's not the specified requirement-
50 GB is sufficient.

NEW QUESTION # 169
Which Tableau Server process is being described?
* Responsible for monitoring various components, detecting failures
* Running failover when needed
* Must be installed on each node

- A. Application Server
- B. Cluster Controller
- C. Ask Data
- D. Backgrounder
- E. Cache Server

**Answer: B**

Explanation:
Explanation

https://help.tableau.com/current/server/en-us/processes.htm

NEW QUESTION # 170
A new engineer reports that he is unable to log on to Tableau Services Manager (TSM) from the initial node of a Windows test cluster. Which account credentials should you instruct the engineer to use?

- A. An account with administrative rights to the computer
- B. An account for the Tableau Server administrator
- C. An account with a Site Administrator role
- D. An account with a Creator site role

**Answer: A**

Explanation:
Tableau Services Manager (TSM) is the administrative tool for managing Tableau Server's configuration, processes, and topology. To log in to TSM (via the web UI at https://<server>:8850 or CLI), you need:
* TSM administrator credentials: These are distinct from site roles and are set during installation or reset via tsm reset.
* Local administrative rights: On Windows, the account used to access TSM must be in the local Administrators group on the initial node, as TSM interacts with system-level services.
In a test cluster, the engineer's inability to log in suggests they lack either the correct TSM credentials or sufficient OS-level permissions. Since the question focuses on a Windows environment and "initial node," the most immediate requirement is local administrative rights to run TSM commands or access the UI.
* Option C (An account with administrative rights to the computer): Correct. The engineer must use an account in the local Administrators group on the initial node to authenticate to TSM. After that, they'll need the TSM admin username/password set during installation.
* Option A (An account with a Creator site role): Incorrect. Site roles (e.g., Creator) apply to content access within Tableau Server,

not TSM administration.
* Option B (An account with a Site Administrator role): Incorrect. Site Administrators manage site content, not server-level TSM functions.
* Option D (An account for the Tableau Server administrator): Partially correct but incomplete. This likely refers to the TSM admin account, but without local admin rights on the machine, login will fail.
Option C is more precise.

## NEW QUESTION # 171

A Tableau Server Creator developed a workbook using Tableau Desktop 2019.2, and published the workbook to Tableau Server 2020.3. The next day, the user cannot find the workbook file on his local machine, and so he downloads the workbook again from Tableau Server 2020.3 to perform some updates. Will he be able to open the workbook using Tableau Desktop 2019.2? (Assume that no one else edited the workbook on Tableau Server, or republished the workbook again)

- A. No
- B. Yes

**Answer: B**

Explanation:
Explanation
