ASIS-PSP certification exam is a comprehensive assessment that covers a broad range of topics related to physical security. These topics include threat assessment, risk management, security technology, physical security design and implementation, emergency management, and business continuity planning. ASIS-PSP Exam is designed to ensure that individuals who hold the certification have a deep understanding of these topics and are able to apply their knowledge effectively in real-world situations.

ASIS Physical Security Professional Exam Sample Questions (Q24-Q29):

NEW QUESTION # 24

What are wide-beam units, primarily used to extend the illumination in long, horizontal strips to protect the approaches to the perimeter barrier?

- A. Perimeter lighting
- B. Floodlights
- C. Search lights
- D. Fresnel Lenses

Answer: B

Explanation:

Floodlights are wide-beam lighting devices used to extend horizontal illumination across large areas, particularly along perimeter barriers. Their design makes them effective in lighting long stretches of fencing or property lines to deter and detect intruders. Unlike spotlights or search lights, floodlights disperse light broadly and evenly, reducing shadows and blind spots.

"Search lights" produce narrow beams for focused scanning.

"Perimeter lighting" is a general concept, not a specific lighting unit.

"Fresnel lenses" are components used in optics and are not lighting units.

NEW QUESTION # 25

The number of security personnel required is generally inversely proportional to the size of the facility, expressed both in terms of square footage or acreage and the number of employees involved.

- A. False
- B. True

Answer: A

NEW QUESTION # 26

Which of the following types of alarm transmission systems is designed to reduce leased telephone line charges while providing a higher degree of security?

- A. Cellular
- B. Multiplex
- C. Dial-up
- D. Circuit loop

Answer: B

Explanation:

Multiplex systems allow multiple alarm signals to be transmitted over a single communication line. This significantly reduces the cost of leasing multiple phone lines while enhancing efficiency and providing a high level of security by encoding and validating data streams.

A (Circuit loop) is an older method using dedicated circuits.

C (Cellular) is wireless but may not always offer secure or low-cost options.

D (Dial-up) is cost-effective but offers limited security and speed.

NEW QUESTION # 27

Reserves are the people standing by in the event that assistance is needed by security personnel on fixed posts or patrol; duty.

- A. True
- B. False

Answer: A

Explanation:

Reserves are security personnel who are not assigned to fixed posts or patrol routes but are instead held in readiness to respond when assistance is needed. They may be used during emergencies, staffing shortages, or heightened security alerts. Their role is crucial in maintaining flexibility in a security force structure.
