## Sharing-and-Visibility-Architect Exam Demo & Sharing-and-Visibility-Architect Passing Score

If you really intend to pass the Sharing-and-Visibility-Architect exam, our software will provide you the fast and convenient learning and you will get the best study materials and get a very good preparation for the exam. The content of the Sharing-and-Visibility-Architect guide torrent is easy to be mastered and has simplified the important information. What's more, our Sharing-and-Visibility-Architect prep torrent conveys more important information with less questions and answers. The learning is relaxed and highly efficiently with our Sharing-and-Visibility-Architect exam questions.

Salesforce Sharing-and-Visibility-Architect Exam is a certification exam offered by Salesforce to assess an individual's knowledge and expertise in designing and implementing sharing and visibility solutions using the Salesforce platform. Sharing-and-Visibility-Architect Exam is intended for individuals who have extensive experience in Salesforce and have a deep understanding of the platform's sharing and visibility features.

## Salesforce Certified Sharing and Visibility Architect Sample Questions (Q24-Q29):

### NEW QUESTION # 24

Universal Containers (UC) would like to store an encryption key within Salesforce for use in Apex code, but it does not want users to be able to see this confidential key. Users require the view setup permission.

How can UC securely store the confidential key?

- A. Create a protected custom metadata type that stores the encryption key. Package the protected custom metadata type with its associated records in a managed package. Install the package in the production org.
- B. Create a protected custom metadata type that stores the encryption key. Package the protected custom metadata type with its associated records in an unlocked package. Install the package in the production org.
- C. Create a custom metadata type that stores the encryption key. Make sure that only the admin profile has access to the custom metadata type so that end users cannot access the encryption key.

**Answer: A**

Explanation:

Protected custom metadata types in managed packages provide a secure way to store sensitive information like encryption keys. When packaged as part of a managed package, the metadata records are shielded from access by users, even those with View Setup and Configuration permissions.

\* Option A: Custom metadata types without protection do not secure the key from users with View Setup permission.

\* Option B: Unlocked packages do not provide the same level of protection as managed packages.

\* Option C (Correct): A protected custom metadata type in a managed package ensures the encryption key is securely stored and cannot be accessed by users.

:

Custom Metadata Types

#### NEW QUESTION # 25

Which two reasons should the Architect consider regarding the use of Apex Sharing Reasons?

Choose 2 answers

- A. Ensuring the Share record is deleted upon ownership change.
- B. Ensuring there is additional criteria available for Criteria-Based Sharing.
- C. Ensuring the developer can more easily troubleshoot programmatic sharing.
- D. Ensuring the Share record is not deleted upon ownership change.

**Answer: C,D**

Explanation:

Explanation

The two reasons that the architect should consider regarding the use of Apex sharing reasons are A and B.

Option A allows the developer to more easily troubleshoot programmatic sharing, as they can identify which sharing records are created by which Apex code. Option B prevents the share record from being deleted upon ownership change, as Apex sharing reasons are not subject to recalculation by Salesforce. The other options are either incorrect or irrelevant.

#### NEW QUESTION # 26

Universal Containers (UC) delivers training and courses to students and companies. UC is implementing a Salesforce Customer Community for its students granting them a Customer Community license. As part of the community requirements, UC asked to give students access to cases that are related to their account in the UC community.

What is the optimum sharing technique to achieve these requirements?

- A. Use Apex sharing to share cases with the students.
- B. Create a sharing set to share cases with the students.
- C. Create a sharing rule to share cases with the students.

**Answer: B**

Explanation:

For Customer Community licenses, the most optimal and Salesforce-recommended method to share cases with users is through a Sharing Set. Sharing Sets allow administrators to grant access to records associated with the user's account or contact, based on their profile and account relationship.

\* Option A: Apex sharing could accomplish this, but it is unnecessary overhead and more complex compared to Sharing Sets, especially for straightforward account-related sharing.

\* Option B: Sharing rules do not apply to community licenses such as Customer Community and are not an effective solution in this

context.

\* Option C (Correct): Sharing Sets provide a declarative solution to meet the requirement. By configuring a Sharing Set, UC can grant students access to cases linked to their account without needing custom code or complex configurations.

:

Sharing Sets for Communities

### NEW QUESTION # 27

Which two settings are available in profiles, but not permission sets?

Choose 2 answers.

- A. Page Layout Assignments
- B. Record Types
- C. Tab Settings
- D. Login Hours

**Answer: A,D**

Explanation:

Explanation

The two settings that are available in profiles, but not permission sets are C and D. Page layout assignments and login hours are profile-specific settings that control the user interface and the time range that users can log in to Salesforce. The other options are either available in both profiles and permission sets, or not related to either.

### NEW QUESTION # 28

A developer at Universal Container is building an integration within a managed package for their internal org that requires login to an external system. The end point requires basic authentication. The Architect would like to ensure that the username and password are managed securely. Which three options should the Architect recommend to secure the credentials?

- A. Store the credentials in named credentials that are used in the apex callout
- B. Store the credentials in protected custom settings that are used in the apex callout
- C. Store the credentials in protected custom metadata that are used in the apex callout
- D. Store the credentials in the apex code, which will not be available to non-admins
- E. Store the credentials in a custom object using encrypted fields

**Answer: A,B,C**

Explanation:

Explanation

Named Credentials, Protected Custom Metadata, and Protected Custom Settings are three options to secure the credentials for the external system. They allow the developer to store the credentials in a secure way that is not exposed to other users or packages. Storing the credentials in a custom object using encrypted fields or in the apex code are not secure options

### NEW QUESTION # 29

.....

The company is preparing for the test candidates to prepare the Sharing-and-Visibility-Architect exam guide professional brand, designed to be the most effective and easiest way to help users through their want to get the test Sharing-and-Visibility-Architect certification and obtain the relevant certification.
