This includes architects, consultants, and administrators who have a deep understanding of identity and access management concepts and technologies.

## Salesforce Certified Identity and Access Management Architect Sample Questions (Q16-Q21):

### NEW QUESTION # 16

A consumer products company uses Salesforce to maintain consumer information, including orders. The company implemented a portal solution using SalesforceExperience Cloud for its consumers where the consumers can log in using their credentials. The company is considering allowing users to login with their Facebook or LinkedIn credentials. Once enabled, what role will Salesforce play?

- A. Facebook and LinkedIn will be the SPs.
- B. Facebook and LinkedIn will act as the IdPs and SPs.
- **C. Salesforce will be the service provider (SP).**
- D. Salesforce will be the identity provider (IdP).

**Answer: C**

Explanation:

To allow users to login with their Facebook or LinkedIn credentials, Salesforce will play the role of a service provider (SP). A SP is an entity that relies on an identity provider (IdP) to authenticate and authorize users. In this scenario, Facebook and LinkedIn are the IdPs, and Salesforce is the SP. The SP receives a token from the IdP and uses it to access Salesforce resources. The other options are not correct for this scenario. References:

Service Provider, Social Sign-On with Authentication Providers

### NEW QUESTION # 17

A security architect is rolling out a new multi-factor authentication (MFA) mandate, where all employees must go through a secure authentication process before accessing Salesforce. There are multiple Identity Providers (IdP) in place and the architect is considering how the "Authentication Method Reference" field (AMR) in the Login History can help.

Which two considerations should the architect keep in mind?

Choose 2 answers

- **A. AMR field shows the authentication methods used at IdP.**
- **B. Both OIDC and Security Assertion Markup Language (SAML) are supported but AMR must be implemented at IdP.**
- C. High-assurance sessions must be configured under Session Security Level Policies.
- D. Dependency on what is supported by OpenID Connect (OIDC) implementation at IdP.

**Answer: A,B**

Explanation:

Explanation

The AMR field in the Login History shows the authentication methods used at the IdP level, such as password, MFA, or SSO. Both OIDC and SAML are supported protocols for SSO, but the IdP must implement the AMR attribute and pass it to Salesforce.

References: Secure Your Users' Identity, Salesforce Multi-Factor Authentication (MFA) and Single Sign-on (SSO)

### NEW QUESTION # 18

Universal Containers (UC) uses Salesforce as a CRM and identity provider (IdP) for their Sales Team to seamlessly login to internal portals. The IT team at UC is now evaluating Salesforce to act as an IdP for its remaining employees. Which Salesforce license is required to fulfill this requirement?

- **A. Identity Only**
- B. IdentityVerification
- C. Identity Connect
- D. External Identity

**Answer: A**

Explanation:

To use Salesforce as an IdP for its remaining employees, the IT team at UC should use the Identity Only license. The Identity Only license is a license type that enables users to access external applications that are integrated with Salesforce using single sign-on (SSO) or delegated authentication, but not access Salesforce objects or data. The other license types are not relevant for this scenario. References: Identity Only License, User Licenses

### NEW QUESTION # 19

Universal Containers (UC) has decided to replace the homegrown customer portal with Salesforce Experience Cloud. UC will continue to use its third-party single sign-on (SSO) solution that stores all of its customer and partner credentials. The first time a customer logs in to the Experience Cloud site through SSO, a user record needs to be created automatically. Which solution should an identity architect recommend in order to automatically provision users in Salesforce upon login?

- A. Custom middleware and web services
- B. Custom login flow and Apex handler
- **C. Just-in-Time (JIT) provisioning**
- D. Third-party AppExchange solution

**Answer: C**

Explanation:

Just-in-Time (JIT) provisioning is a feature that allows Salesforce to create or update user records on the fly when users log in through an external identity provider. This eliminates the need for manual or batch user provisioning in Salesforce. References: Just-in-Time Provisioning for SAML and OpenID Connect, Identity 101: Design Patterns for Access Management

### NEW QUESTION # 20

Universal Containers (UC) wants its closed Won opportunities to be synced to a Data warehouse in near real time. UC has implemented Outbound Message to enable near real-time data sync. UC wants to ensure that communication between Salesforce and Target System is secure. What certificate is sent along with the Outbound Message?

- A. The default client Certificate from the Develop--> API menu.
- B. The CA-signed Certificate from the Certificate and Key Management Menu.
- C. The Self-signed Certificates from the Certificate & Key Management menu.
- **D. The default client Certificate or the Certificate and Key Management menu.**

**Answer: D**

Explanation:

Explanation

The default client certificate or the certificate from the Certificate and Key Management menu is sent along with the outbound message. When sending outbound messages, Salesforce will present the CA-signed or self-signed certificate configured under Setup | Security Controls | Certificate and Key Management | API Client Certificate1. The default client certificate is a self-signed certificate that Salesforce generates for you when you enable outbound messages2. You can also create your own self-signed or CA-signed certificates and upload them to the Certificate and Key Management menu3. The certificate from the Develop | API menu is not used for outbound messages, but for SOAP API clients that need to authenticate with Salesforce4.
