Certificate of Cloud Security Knowledge (CCSK) v4 Preparation Guide

A self study guide for preparing for the CCSK v4 Exam.

Welcome to the Certificate of Cloud Security Knowledge (CCSK), the industry's first user certification for secure cloud computing. The CCSK is designed to ensure that a broad range of professionals with a responsibility related to cloud computing have a demonstrated awareness of the security threats and best practices for securing the cloud.

Basic Facts about the CCSK Examination

The CCSK examination is a timed, multiple choice examination located at <https://ccsk.cloudsecurityalliance.org/>. The examination consists of 60 multiple choice questions, and must be completed within 90 minutes. A participant must correctly answer 80% of the questions to receive a passing score.

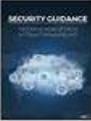

It is not possible to pause or stop the examination and finish it at a later date. Therefore, the participant should be properly prepared to take the test before starting, and while you can choose to take the test any time of the day or night, one should budget for 90 minutes of uninterrupted time once you make the commitment to start the test.

If you have any problems with the test itself, or other extenuating circumstances such as network outages that inhibit your ability to complete the test, please contact CCSK Test Support at ccsk.admin@cloudsecurityalliance.org.

Studying for the CCSK Examination

The body of knowledge for the CCSK examination is the CSA Security Guidance for Critical Areas of Focus in Cloud Computing v4, the Cloud Controls Matrix (CCM), and the ENISA report "Cloud Computing: Benefits, Risks and Recommendations for Information Security".

Pass4training Certificate of Cloud Security Knowledge v5 (CCSKv5.0) Certification Exam come in three different formats so that the users can choose their desired design and prepare Certificate of Cloud Security Knowledge v5 (CCSKv5.0) (CCSK) exam according to their needs. The first we will discuss here is the PDF file of real Certificate of Cloud Security Knowledge v5 (CCSKv5.0) (CCSK) exam questions. It can be taken to any place via laptops, tablets, and smartphones. In addition, you can print these Certificate of Cloud Security Knowledge v5 (CCSKv5.0) (CCSK) PDF questions for paper study in this format of Pass4training product frees you from restrictions of time and place as you can study CCSK exam questions from your comfort zone in your spare time.

Cloud Security Alliance CCSK Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> • Infrastructure & Networking: This section measures the skills of Cloud Architects and covers infrastructure and network security, including cloud service provider responsibilities.
Topic 2	<ul style="list-style-type: none"> • Cloud Computing Concepts & Architectures: This section measures the skills of Cloud Architects and covers foundational knowledge of cloud computing, including architectural models, deployment options, and essential controls. It provides a comprehensive understanding of cloud computing principles and the CSA Enterprise Architecture Model.

Topic 3	<ul style="list-style-type: none"> • Organization Management: This section measures the skills of Cloud Architects and addresses organizational structure and security management in cloud environments. It includes securing and validating service provider deployments.
Topic 4	<ul style="list-style-type: none"> • Related Technologies & Strategies: This section assesses the skills of Cloud Architects and introduces advanced technologies like Zero Trust and AI for strategic cybersecurity.
Topic 5	<ul style="list-style-type: none"> • Application Security: This section measures the skills of Cloud Security Engineers in cloud application security, from design to maintenance.
Topic 6	<ul style="list-style-type: none"> • Cloud Governance: This section assesses the skills of Cloud Security Engineers in managing cloud governance, focusing on aligning IT with business objectives and ensuring security within cloud environments. It emphasizes the role of governance in cloud security.
Topic 7	<ul style="list-style-type: none"> • Cloud Workload Security: This section measures the skills of Cloud Security Engineers in securing deployable software and data units on various cloud platforms.
Topic 8	<ul style="list-style-type: none"> • Data Security: This section assesses the skills of Cloud Architects and covers cloud data security strategies, tools, and practices.
Topic 9	<ul style="list-style-type: none"> • Identity & Access Management: This section measures the skills of Cloud Security Engineers and focuses on Identity and Access Management (IAM) principles and practices in cloud environments, emphasizing secure access between organizations and cloud providers.
Topic 10	<ul style="list-style-type: none"> • Risk, Audit, & Compliance: This section measures the skills of Cloud Security Engineers and covers risk management, auditing processes, and compliance requirements in cloud environments. It provides a comprehensive understanding of cloud security, risk assessment, and compliance management.
Topic 11	<ul style="list-style-type: none"> • Security Monitoring: This section assesses the skills of Cloud Security Engineers in security monitoring, addressing challenges in cloud environments and emphasizing telemetry and log analysis.

Cloud Security Alliance Certificate of Cloud Security Knowledge v5 (CCSKv5.0) Sample Questions (Q237-Q242):

NEW QUESTION # 237

Which of the following is a primary purpose of establishing cloud risk registries?

- A. To manage and update cloud account credentials
- **B. Identify and manage risks associated with cloud services**
- C. In order to establish cloud service level agreements
- D. To monitor real-time cloud performance

Answer: B

Explanation:

A cloud risk registry is primarily used to identify and manage risks associated with cloud services. It serves as a tool for documenting, tracking, and assessing potential risks to the organization that arise from using cloud services. This includes risks related to security, compliance, availability, and performance. The risk registry helps organizations prioritize and mitigate these risks effectively to ensure the security and resilience of their cloud infrastructure.

Establishing SLAs is related to cloud contract management but not the primary purpose of a risk registry.

Monitoring real-time cloud performance is a performance monitoring task, not the focus of a risk registry.

Managing cloud account credentials is an aspect of identity and access management, not related to risk registries.

NEW QUESTION # 238

Due to multi-tenancy nature of cloud, there is the possibility that data belonging to one customer will be read or received by another. This is known as:

- A. Data dispersion
- B. Data disclosure
- **C. Information Bleed**
- D. Wilful data disclosure

Answer: C

Explanation:

Information Bleed With multiple customers processing and storing data over the same infrastructure, there is the possibility that data belonging to one customer will be read or received by another.

Moreover, even if this does not happen with raw data, it might be possible for one customer to detect telltale information about another customer's activity, such as when the customer is processing data, how long the procedure takes, and so on.

NEW QUESTION # 239

In which deployment model should the governance strategy consider the minimum common set of controls comprised of the Cloud Service Provider contract and the organization's internal governance agreements?

- A. Private
- B. Public
- C. PaaS
- D. IaaS
- **E. Hybrid**

Answer: E

NEW QUESTION # 240

Term which defined acquired IT Technologies without the knowledge of IT Department is:

- A. Shadow application
- **B. Shadow IT**
- C. Shadow servers
- D. Shadow devices

Answer: B

Explanation:

Shadow IT is a term often used to describe information-technology systems and solutions built and used inside organizations without explicit organizational approval.

NEW QUESTION # 241

Which of the following adds abstraction layer on top of networking hardware and decouples network control plane from the data plane?

- A. VLANs
- B. Converged Networks
- C. Software Defined Networks
- D. Virtual Private Networks

Answer: C

Explanation:

Software Defined Networking(SDN):A more complete abstraction layer on top of networking hardware, SDNs decouple the network control plane from the data. This allows us to abstract networking from the traditional limitations of a LAN.
