Prep in an Amazing Way with Valid Nutanix NCP-US Dumps

We have chosen a large number of professionals to make NCP-US learning question more professional, while allowing our study materials to keep up with the times. Of course, we do it all for you to get the information you want, and you can make faster progress. You can also get help from NCP-US Exam Training professionals at any time. We can be sure that with the professional help of our NCP-US test guide you will surely get a very good experience. Good materials and methods can help you to do more with less. Choose NCP-US test guide to get you closer to success!

The NCP-US certification exam is highly recognized in the industry and is a valuable asset for IT professionals seeking to advance their career in the field of storage administration. Nutanix Certified Professional - Unified Storage v6.5 certification exam is designed to assess the candidate's ability to manage Nutanix storage solutions in real-world scenarios, including data protection, performance tuning, and troubleshooting. NCP-US Exam is also designed to validate the candidate's knowledge of Nutanix storage architecture, features, and functionality.

Nutanix Certified Professional - Unified Storage v6.5 Sample Questions (Q69-Q74):

NEW QUESTION # 69
Which confirmation is required for an Objects deployment?

- A. Configure Domain Controllers on both Prism Element and Prism Central.
- B. Configure VPC on both Prism Element and Prism Central.
- C. Configure a dedicated storage container on Prism Element or Prism Cent
- D. Configure NTP servers on both Prism Element and Prism Central.

Answer: D

NEW QUESTION # 70
An administrator has been experiencing performance issues with a SQL VM. To address these issues, the administrator migrated the database to a Volume Group. Following the migration, the performance issues have continued.
What should the administrator do to resolve these performance issues?

- A. Disable CHAP,
- B. Use multiple subnets for iSCSI traffic.
- C. use multiple vDisks in the Volume Group.
- D. Enable Jumbo Frames.

Answer: C

Explanation:
According to Nutanix Volumes - Recommendations And Best Practices1, "Multiple disks per Nutanix node may also improve an application's performance. For performance-intensive environments, we recommend using between four and eight disks per CVM for a given workload." Therefore, the administrator should use multiple vDisks in the Volume Group to distribute the SQL workload across more disks and nodes.

NEW QUESTION # 71
An administrator notices that a database VM is experiencing poor disk performance. Which storage technology should the administrator consider using?

- A. Volume Groups
- B. Nutanix Files SMB share
- C. Nutanix Objects
- D. Nutanix Files NFS export

Answer: A

NEW QUESTION # 72
An administrator is scheduling to upgrade Files from version 3.8.1.3 to 4.1.0.2 for all the dark sites.
After transferring the dark site bundle to the internal web server, the administrator performs an LCM inventory but cannot check off the Files upgrade to be performed.
Which component needs to be upgraded along side of the core Files components?

- A. Files Manager
- B. File Server Module
- C. File Analytics
- D. Files Sender

Answer: B

Explanation:

When upgrading Files from version 3.8.1.3 to 4.1.0.2 for all dark sites, the File Server Module component needs to be upgraded alongside the core Files components. This is because the File Server Module is a core component of Files and is responsible for file-level data services, including access control, auditing, and file sharing.

If the File Server Module is not upgraded alongside the core Files components, it can result in compatibility issues and potentially cause the upgrade to fail.

Therefore, it is recommended to upgrade the File Server Module together with the core Files components when upgrading Files.

NEW QUESTION # 73

An administrator needs to create a volume group (VG) that will host highly sensitive dat a. These two requirements must be met:

* The VG must be accessible only by the OS where the data is going to be used by the application
* The access needs to be secured with an additional security login

Which three features or settings will help the administrator meet those requirements? (Choose two.)

- A. CHAP authentication needs to be setup for that Volume Group.
- B. On-the-wire encryption must be enabled for all iSCSI traffic.
- C. The VG configuration must contain only the IQN of the client OS where the application runs.
- D. All CVMs must have RDMA-capable NICs to facilitate direct peer-to-peer communication.

Answer: A,C

NEW QUESTION # 74
