If you fail in the exam with our Professional-Cloud-Architect quiz prep we will refund you in full at one time immediately. If only you provide the proof which include the exam proof and the scanning copy or the screenshot of the failure marks we will refund you immediately. If any problems or doubts about our Professional-Cloud-Architect exam torrent exist, please contact our customer service personnel online or contact us by mails and we will reply you and solve your doubts immediately. Before you buy our product, you can download and try out it freely so you can have a good understanding of our Professional-Cloud-Architect Quiz prep. Please feel safe to purchase our Professional-Cloud-Architect exam torrent any time as you like. We provide the best service to the client and hope the client can be satisfied.

The Google Professional-Cloud-Architect Exam consists of multiple-choice and multiple-select questions that cover a wide range of topics, including cloud computing architecture, infrastructure design, data storage and management, security, compliance, and pricing. To pass the exam, candidates must demonstrate a deep understanding of these topics and be able to apply their knowledge to real-world scenarios. Successful completion of the exam not only demonstrates the candidate's proficiency in designing and implementing cloud solutions on Google Cloud, but also enhances their credibility as a cloud architect and opens up new career opportunities.

Questions Google Certified Professional - Cloud Architect (GCP) Pdf

DumpsQuestion Google Professional-Cloud-Architect test answers are the most effective and we guarantee your success in the first attempt. If you do not pass Google Professional-Cloud-Architect exam, we will give you a FULL REFUND of your purchasing fee. Failure in exam will not affect your finance. On request we can provide you with another exam of your choice absolutely free of cost. Think you! What do you have to lose? Google Professional-Cloud-Architect Test Answers are the latest and 100% guarantee to pass your Professional-Cloud-Architect exam.

Google Certified Professional - Cloud Architect (GCP) Sample Questions (Q358-Q363):

NEW QUESTION # 358

For this question, refer to the TerramEarth case study. You need to implement a reliable, scalable GCP solution for the data warehouse for your company, TerramEarth. Considering the TerramEarth business and technical requirements, what should you do?

- A. Replace the existing data warehouse with a Compute Engine instance with 96 CPUs. Add an additional Compute Engine pre-emptible instance with 32 CPUs.
- **B. Replace the existing data warehouse with BigQuery. Use table partitioning.**
- C. Replace the existing data warehouse with a Compute Engine instance with 96 CPUs.
- D. Replace the existing data warehouse with BigQuery. Use federated data sources.

Answer: B

Explanation:

Topic 7, Mountkirk Games Case 2

Company Overview

Mountkirk Games makes online, session-based, multiplayer games for mobile platforms. They build all of their games using some server-side integration. Historically, they have used cloud providers to lease physical servers.

Due to the unexpected popularity of some of their games, they have had problems scaling their global audience, application servers, MySQL databases, and analytics tools.

Their current model is to write game statistics to files and send them through an ETL tool that loads them into a centralized MySQL database for reporting.

Solution Concept

Mountkirk Games is building a new game, which they expect to be very popular. They plan to deploy the game's backend on Google Compute Engine so they can capture streaming metrics, run intensive analytics, and take advantage of its autoscaling server environment and integrate with a managed NoSQL database.

Business Requirements

- * Increase to a global footprint.
- * Improve uptime - downtime is loss of players.
- * Increase efficiency of the cloud resources we use.
- * Reduce latency to all customers.

Technical Requirements

Requirements for Game Backend Platform

- * Dynamically scale up or down based on game activity.
- * Connect to a transactional database service to manage user profiles and game state.
- * Store game activity in a timeseries database service for future analysis.
- * As the system scales, ensure that data is not lost due to processing backlogs.
- * Run hardened Linux distro.

Requirements for Game Analytics Platform

- * Dynamically scale up or down based on game activity
- * Process incoming data on the fly directly from the game servers
- * Process data that arrives late because of slow mobile networks
- * Allow queries to access at least 10 TB of historical data
- * Process files that are regularly uploaded by users' mobile devices

Executive Statement

Our last successful game did not scale well with our previous cloud provider, resulting in lower user adoption and affecting the game's reputation. Our investors want more key performance indicators (KPIs) to evaluate the speed and stability of the game, as well as other metrics that provide deeper insight into usage patterns so we can adapt the game to target users. Additionally, our current technology stack cannot provide the scale we need, so we want to replace MySQL and move to an environment that provides autoscaling, low latency load balancing, and frees us up from managing physical servers.

NEW QUESTION # 359

Your company pushes batches of sensitive transaction data from its application server VMs to Cloud Pub/ Sub for processing and storage. What is the Google-recommended way for your application to authenticate to the required Google Cloud services?

- A. Ensure that VM service accounts do not have access to Cloud Pub/Sub, and use VM access scopes to grant the appropriate Cloud Pub/Sub IAM roles.
- B. Create a gateway to Cloud Pub/Sub using a Cloud Function, and grant the Cloud Function service account the appropriate Cloud Pub/Sub IAM roles.
- C. Generate an OAuth2 access token for accessing Cloud Pub/Sub, encrypt it, and store it in Cloud Storage for access from each VM.
- **D. Ensure that VM service accounts are granted the appropriate Cloud Pub/Sub IAM roles.**

Answer: D

Explanation:

<https://cloud.google.com/compute/docs/access/create-enable-service-accounts-for-instances> The service account can only execute API methods that are allowed by both the access scope and the service account's specific IAM roles.

NEW QUESTION # 360

For this question, refer to the Mountkirk Games case study.

Mountkirk Games' gaming servers are not automatically scaling properly. Last month, they rolled out a new feature, which suddenly became very popular. A record number of users are trying to use the service, but many of them are getting 503 errors and very slow response times. What should they investigate first?

- **A. Verify that the project quota hasn't been exceeded.**
- B. Verify that the new feature code did not introduce any performance bugs.
- C. Verify that the load-testing team is not running their tool against production.
- D. Verify that the database is online.

Answer: A

Explanation:

Explanation

503 is service unavailable error. If the database was online everyone would get the 503 error.

NEW QUESTION # 361

An application development team believes their current logging tool will not meet their needs for their new cloud-based product.

They want a better tool to capture errors and help them analyze their historical log data. You want to help them find a solution that meets their needs.

What should you do?

- A. Help them define their requirements and assess viable logging tools
- **B. Direct them to download and install the Google StackDriver logging agent**
- C. Send them a list of online resources about logging best practices
- D. Help them upgrade their current tool to take advantage of any new features

Answer: B

Explanation:

Explanation/Reference:

Explanation:

The Stackdriver Logging agent streams logs from your VM instances and from selected third party software packages to Stackdriver Logging. Using the agent is optional but we recommend it. The agent runs under both Linux and Microsoft Windows.

Note: Stackdriver Logging allows you to store, search, analyze, monitor, and alert on log data and events from Google Cloud Platform and Amazon Web Services (AWS). Our API also allows ingestion of any custom log data from any source. Stackdriver Logging is a fully managed service that performs at scale and can ingest application and system log data from thousands of VMs.

Even better, you can analyze all that log data in real time.

References: <https://cloud.google.com/logging/docs/agent/installation>

NEW QUESTION # 362

Your customer is receiving reports that their recently updated Google App Engine application is taking approximately 30 seconds to load for some of their users. This behavior was not reported before the update.

What strategy should you take?

- A. Open a support ticket to ask for network capture and flow data to diagnose the problem, then roll back your application
- B. Work with your ISP to diagnose the problem
- C. Roll back to an earlier known good release, then push the release again at a quieter period to investigate. Then use Stackdriver Trace and Logging to diagnose the problem
- **D. Roll back to an earlier known good release initially, then use Stackdriver Trace and Logging to diagnose the problem in a development/test/staging environment**

Answer: D

Explanation:

Stackdriver Logging allows you to store, search, analyze, monitor, and alert on log data and events from Google Cloud Platform and Amazon Web Services (AWS). Our API also allows ingestion of any custom log data from any source. Stackdriver Logging is a fully managed service that performs at scale and can ingest application and system log data from thousands of VMs. Even better, you can analyze all that log data in real time.
