We are so proud to tell you that according to the statistics from the feedback of all of our customers, the pass rate among our customers who prepared for the exam under the guidance of our Nutanix Certified Professional - End User Computing (NCP-EUC) 6.10 Exam test torrent has reached as high as 98% to 100%, which definitely marks the highest pass rate in the field. Therefore, the NCP-EUC guide torrent compiled by our company is definitely will be the most sensible choice for you. We can assure you that you can pass the exam as well as getting the related certification in a breeze with the guidance of our Nutanix Certified Professional - End User Computing (NCP-EUC) 6.10 Exam test torrent, now I would like to introduce some details about our NCP-EUC Guide Torrent for you.

Nutanix NCP-EUC Exam is an important certification exam for IT professionals who work with Nutanix VDI solutions. NCP-EUC exam evaluates the knowledge and skills of IT professionals in deploying and managing Nutanix VDI solutions, and provides them with a valuable certification that demonstrates their expertise in the field. NCP-EUC Exam is challenging and comprehensive, and passing it requires a deep understanding of Nutanix VDI architecture, deployment, configuration, and management.

## NCP-EUC Valid Exam Registration - NCP-EUC Certification Test Answers

Up to now, we have more than tens of thousands of customers around the world supporting our NCP-EUC training prep. So our NCP-EUC study materials are elemental materials you cannot miss. In your review duration, you can contact with our after-sales section if there are any problems with our NCP-EUC Practice Braindumps. They will help you 24/7 all the time. These services assure you avoid any loss.

## Nutanix Certified Professional - End User Computing (NCP-EUC) 6.10 Exam Sample Questions (Q24-Q29):

### NEW QUESTION # 24

An administrator is tasked with providing dedicated VDIs to developers.

Which deployment method type requires the least amount of effort to achieve this task?

- A. Dedicated VDI provisioned from MCS
- B. Non-persistent pool
- C. Dedicated VDI provisioned from PVS

- D. Static-built Remote PC pool

**Answer: A**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract of Nutanix End User Computing documents:

According to Citrix on Nutanix Reference Architectures:

- \* Simplicity of MCS: Machine Creation Services (MCS) is integrated directly into the Citrix Studio console and communicates natively with the Nutanix AHV APIs. It creates clones (Linked or Full) effortlessly without requiring extra infrastructure.
- \* Comparison with PVS: PVS (Provisioning Services) (Option D) requires a separate PVS infrastructure (Provisioning Servers, SQL database, TFTP/DHCP configuration, Network Streaming Setup).
- \* Conclusion: For a "Dedicated VDI" requirement, using MCS to provision full or fast clones requires significantly less administrative effort and infrastructure setup than implementing a PVS environment.

#### NEW QUESTION # 25

An administrator is required to keep past custom reports. The report runs once daily. Last Friday, when the administrator checked, there were 22 copies saved. On Friday this week, an administrator expects to see 29 saved report copies, but some reports are missing.

What is a probable cause?

- A. The system reached the default retention policy limit.
- B. Time-based retention reached the maximum of 2 months.
- C. PC has migrated to another system and all reports are not visible.
- D. The system currently has retained the maximum of 25 copies.

**Answer: D**

Explanation:

In Nutanix Prism Central, the reporting feature allows administrators to schedule and generate custom reports.

To manage storage and database capacity, Prism Central enforces a retention limit on these generated report instances.

According to the Prism Central Guide, "By default, Prism Central retains 25 instances of each report." In the scenario described:

- \* The administrator had 22 reports.
- \* Over the next week (7 days), 7 new reports were generated ( $22 + 7 = 29$  total potential instances).
- \* Because the total (29) exceeds the hard default limit of 25, the system automatically rotated out (deleted) the 4 oldest copies to maintain the count at 25. This explains why reports are missing despite the expectation of seeing 29.

#### NEW QUESTION # 26

An administrator wants to utilize bidirectional replication to ensure that the user profile is present in both sites. This will allow the user to move between physical sites and access data locally.

What feature should the administrator configure to provide this functionality?

- A. Smart DR
- B. VDI Sync
- C. Files DR
- D. Data Consolidation

**Answer: B**

Explanation:

To achieve the requirement of bidirectional replication where a user can access their profile data locally at either site (Active-Active profile availability), the administrator should configure VDI Sync.

VDI Sync is a specialized configuration within the Nutanix Files ecosystem designed to synchronize User Profile directories across distributed file server instances. Unlike standard one-way Disaster Recovery (Smart DR) which is designed for failover, VDI Sync ensures that changes made to a profile at Site A are replicated to Site B, and vice-versa, allowing users to roam between physical locations while maintaining a consistent, local copy of their profile data.

#### NEW QUESTION # 27

An administrator has been evaluating a performance issue with the current Citrix VDI solution on Nutanix.

During the evaluation, the administrator finds out there is a feature that is enabled called Shadow Clones. What would happen if an administrator disabled Shadow Clones within a company's VDI environment?

- **A. Deployment times would increase as the number deployed desktops increase,**
- B. Boot storms would be eliminated due to desktop resource contention.
- C. Boot storms would be eliminated because the number of desktops would be throttled.
- D. Deployment times would decrease when deploying additional desktops.

**Answer: A**

Explanation:

Nutanix's Shadow Clones feature is used to create linked clones or snapshots of base VMs, which can improve VM provisioning time and storage efficiency by reducing the amount of duplicated data.

If an administrator disables Shadow Clones within a company's VDI environment, it is likely that deployment times would increase as the number of deployed desktops increases. This is because linked clones or snapshots would no longer be used, so each new desktop deployment would require creating a full copy of the base VM.

Nutanix Shadow Clones allow for distributed caching of a particular disk or VM data, which are in a 'multi-reader' scenario. This can help in scenarios such as VDI or private clone boot storms, where VMs on multiple nodes read from the same set of base disks<sup>12</sup>

#### NEW QUESTION # 28

An administrator would like to apply a group of base settings to Citrix-based VDI users at each logon. which user profile type would best fit the scenario?

- **A. Mandatory Profiles**
- B. Virtual disk-based Profiles
- C. Roaming Profiles
- D. Local Profiles

**Answer: A**

Explanation:

A mandatory profile is a type of roaming profile that is read-only and does not save any changes made by users during their sessions. A mandatory profile can be applied to a group of users who share a common desktop environment and do not need to customize their settings or preferences.

A mandatory profile can ensure that a group of base settings are applied to Citrix-based VDI users at each logon, regardless of any changes they make during their sessions. A mandatory profile can also improve performance, security, and consistency of the VDI environment.

To use a mandatory profile with Citrix Virtual Apps and Desktops, you need to create a template profile on a reference machine, rename its NTUSER.DAT file to NTUSER.MAN, and copy it to a network share. Then you need to configure Profile Management policies or Active Directory settings to point to the network share location for your users<sup>2</sup>.

#### NEW QUESTION # 29
