Our company has authoritative experts and experienced team in related industry. To give the customer the best service, all of our Integration-Architect exam torrent materials is designed by experienced experts from various field, so our Integration-Architect Learning materials will help to better absorb the test sites. One of the great advantages of buying our product is that can help you master the core knowledge in the shortest time. At the same time, our Integration-Architect Valid Study Guide materials discard the most traditional rote memorization methods and impart the key points of the qualifying exam closely.

Salesforce Integration-Architect Certification Exam focuses on testing the candidate's knowledge and skills in designing and implementing complex integrations using various Salesforce technologies such as Apex, Visualforce, Salesforce APIs, and middleware solutions. Candidates are expected to demonstrate their ability to design scalable, secure, and maintainable integration solutions that meet complex business requirements.

Salesforce Integration-Architect (Salesforce Certified Integration Architect) Exam is an important certification that attests to one's expertise in Salesforce integration architecture. It is a challenging exam that requires candidates to display their ability to design and implement solutions that integrate Salesforce with other enterprise systems. Candidates who complete this certification become experts in the field of data and application integration.

2026 Integration-Architect Exam Experience Pass Certify | High-quality Integration-Architect Dumps Guide: Salesforce Certified Integration Architect

The Integration-Architect exam prepare of our website is completed by experts who has a good understanding of real exams and have many years of experience writing Integration-Architect study materials. They know very well what candidates really need most when they prepare for the exam. They also understand the real exam situation very well. So they compiled Integration-Architect Exam prepare that they hope to do their utmost to help candidates pass the exam and get what job they want. They apply to exam candidates of different level of computer industry. So whichever degree you are at, you can utilize our Integration-Architect study materials tool with following traits.

Salesforce Certified Integration Architect Sample Questions (Q23-Q28):

NEW QUESTION # 23

Northern Trail Outfitters uses a custom Java application to display code coverage and test results for all of their enterprise applications and is planning to include Salesforce as well.

Which Salesforce API should an Integration Architect use to meet the requirement?

- A. SOAP API
- B. Analytics REST API

- C. Tooling API
- D. Metadata API

Answer: C

Explanation:

Explanation

Option D is correct because Tooling API is the Salesforce API that can be used to retrieve code coverage and test results for Apex classes and triggers. Tooling API provides REST and SOAP interfaces to access metadata about code, execute tests, and get test results¹² Option A is incorrect because SOAP API is a Salesforce API that can be used to create, retrieve, update, or delete records, but not to get code coverage and test results. SOAP API uses a WSDL file to define the parameters for accessing data through the API¹³ Option B is incorrect because Analytics REST API is a Salesforce API that can be used to access data from reports and dashboards, but not from code coverage and test results. Analytics REST API provides a programmatic way to interact with analytics features such as lenses, datasets, and dashboards⁴ Option C is incorrect because Metadata API is a Salesforce API that can be used to retrieve, deploy, create, update, or delete customization information, such as custom object definitions and page layouts, but not code coverage and test results. Metadata API is mainly used for development tools or backup tools⁵ References: 1: Introducing Tooling API 2: Tooling API Examples 3: SOAP API Developer Guide 4: Analytics REST API Developer Guide 5: Metadata API Developer Guide

NEW QUESTION # 24

Northern Trail Outfitters leverages Sales Cloud. When an opportunity has changed its status to "Closed/Won" and there are products attached, the details should be passed to the OMS for fulfillment operations. The callout from Salesforce to the OMS should be synchronous. What should an integration architect do to satisfy these requirements?

- A. Develop a batch Apex job that aggregates closed opportunities and makes a REST callout to the OMS hourly.
- B. Build a Lightning component that makes a synchronous Apex REST callout to the OMS when a button is clicked.
- C. Write a trigger that invokes an Apex proxy class to make a REST callout to the OMS.

Answer: B

Explanation:

A synchronous requirement in Salesforce implies a Request-Reply pattern where the user waits for a response. To implement this correctly while adhering to platform constraints, the architect must initiate the callout from the User Interface (UI) layer.³ Option C is the correct architectural choice. By using a Lightning component and a button (or a Quick Action), the callout is initiated directly from the user's session. The component calls an Apex controller, which performs the synchronous REST callout to the OMS. This allows the user to receive immediate feedback-such as a "Success" message or an "Error" notification from the OMS-directly on the Opportunity page.

Option A is incorrect because Apex Triggers are prohibited from making synchronous callouts. If a trigger initiates a callout, it must be asynchronous (using `@future` or `Queueable Apex`), which violates the business requirement for synchronicity. Making a synchronous call from a trigger would block the database transaction and could lead to "Uncommitted Work Pending" errors or system timeouts. Option B (Batch Apex) is inherently asynchronous and delayed; an hourly job would not provide the real-time, synchronous feedback required during the "Closed/Won" transition. Therefore, moving the integration logic to a UI-driven button is the only way to satisfy the synchronous requirement while staying within Salesforce's execution and transaction limits.

NEW QUESTION # 25

An Architect has received a request to prevent employees that leave the company from accessing data in Salesforce after they are deactivated in the company's HR system.

What should an Architect determine before recommending a solution?

- A. Determine data access prevention requirements, then identify system constraints.
- B. Determine data volume requirements, then identify the loading schedule.
- C. Determine data access prevention requirements, then identify frequency.
- D. Determine inbound integration requirements, then identify frequency.

Answer: D

NEW QUESTION # 26

Universal Containers (UC) is a leading provider of management training globally, UC requested students course registration data generated from the Salesforce student community to be synced with the learning management system (LMS). Any update to the course registration data needs to be reflected in the LMS.

Which integration mechanism should be used to meet the requirement?

- A. Platform Event
- **B. Change Data Capture (CDC)**
- C. Streaming API
- D. Outbound Message

Answer: B

Explanation:

Explanation

Change Data Capture (CDC) is the best option to meet the requirement. CDC is a type of streaming event that notifies subscribers of changes to Salesforce records, such as creation, update, delete, and undelete operations.

By subscribing to CDC events for the course registration data, the LMS can receive real-time updates and sync with Salesforce. Streaming API is another type of streaming event that notifies subscribers of changes to Salesforce records that match a SOQL query. However, Streaming API has some limitations, such as not supporting all SOQL features and not capturing delete and undelete operations. Platform Event is a type of streaming event that delivers custom notifications within the Salesforce platform or from external sources.

Platform Event is not suitable for this requirement because it is not tied to Salesforce records and requires custom logic to publish and subscribe. Outbound Message is a workflow action that sends SOAP messages with field values to designated endpoints. Outbound Message is not suitable for this requirement because it does not support complex data types, such as sObjects or collections.

NEW QUESTION # 27

An Architect has received a request to prevent employees that leave the company from accessing data in Salesforce after they are deactivated in the company's HR system.

What should an Architect determine before recommending a solution?

- **A. Determine data access prevention requirements, then identify frequency.**
- B. Determine inbound integration requirements, then identify frequency.
- C. Determine data access prevention requirements, then identify system constraints.
- D. Determine data volume requirements, then identify the loading schedule.

Answer: A

Explanation:

Explanation

The Architect should determine the data access prevention requirements and then identify the system constraints before recommending a solution. The data access prevention requirements are the business rules and policies that define how to prevent deactivated employees from accessing Salesforce data. For example, the Architect should determine whether the HR system can send a notification to Salesforce when an employee is deactivated, or whether Salesforce needs to query the HR system periodically to check the employee status.

The system constraints are the technical limitations and challenges that may affect the integration solution. For example, the Architect should determine whether the HR system supports outbound or inbound integration, what are the security and authentication protocols, what are the data formats and protocols, and what are the performance and scalability requirements. The frequency of the integration is not as important as the requirements and constraints, as it can be adjusted based on the business needs and technical feasibility. The data volume requirements and loading schedule are not relevant for this scenario, as they are more applicable for data migration or replication scenarios.

NEW QUESTION # 28

.....

We provide our customers with the most reliable learning materials about Integration-Architect certification exam and the guarantee of pass. We assist you to prepare the key knowledge points of Integration-Architect actual test and obtain the up-to-dated exam answers. All Integration-Architect Test Questions offered by us are tested and selected by our senior experts in IT field, which only need little time to focus on the practice and the preparation.
