

Acquia Drupal-Site-Builder Questions: Fosters Your Exam Passing Skills [2026]

For candidates who are preparing for the Drupal-Site-Builder exam, passing the Drupal-Site-Builder exam is a long-cherished wish. So if you want to pass the Drupal-Site-Builder exam, you should choose the product of our company. Since our company is a leading team of the business, we have lots of experienced experts to compile the practice materials of the Drupal-Site-Builder exam, and the practice materials also provide the detailed answers. And the pass rate of the Drupal-Site-Builder Exam is 98%. If you failure to pass the Drupal-Site-Builder exam after purchasing the product, money back is guaranteed. What's more, our product is quite cheaper compared with other product, you just need to spent some money to buy and practiceit, then a certificate of the Drupal-Site-Builder will be gotten, which can add your competitive ability in the job market.

The exam solutions has three formats and one of them is Acquia Drupal-Site-Builder practice exam software (desktop and web-based). These Acquia Drupal-Site-Builder practice exams are specially built for the students so that they can evaluate what they have studied. These Drupal-Site-Builder Practice Tests are customizable which means that users can adjust the time and questions according to their needs which will teach them how to overcome mistakes so they can pass Drupal-Site-Builder exam.

2026 Drupal-Site-Builder New Test Bootcamp | Excellent Acquia Certified Drupal Site Builder Exam for Drupal 10, 11 100% Free Reliable Exam Topics

Each format of the Acquia Certification Exams not only offers updated exam questions but also additional benefits. A free trial of the Acquia Certified Drupal Site Builder Exam for Drupal 10, 11 (Drupal-Site-Builder) exam dumps prep material before purchasing, up to 1 year of free updates, and a money-back guarantee according to terms and conditions are benefits of buying Acquia Certified Drupal Site Builder Exam for Drupal 10, 11 (Drupal-Site-Builder) real questions today. A support team is also available 24/7 to answer any queries related to the Acquia Drupal-Site-Builder exam dumps.

Acquia Certified Drupal Site Builder Exam for Drupal 10, 11 Sample Questions (Q16-Q21):

NEW QUESTION # 16

While building a new site, you are working with the default frontend theme. You have placed custom blocks in available regions. After some time, you decide to install a new contributed theme, and set it as the default for the site. After switching to the new theme, you notice that many of your blocks have disappeared! What is the likely reason for this?

- A. The new theme only allows system blocks, not custom blocks.
- **B. The new theme's regions have different names from the regions in the old theme. Those blocks have been disabled.**
- C. The blocks were built in such a way that they are not compatible with the new theme. They need to be re-created.
- D. The blocks have not yet been registered with the new theme.

Answer: B

Explanation:

In Drupal 10 and Drupal 11, block placement is defined per theme . The Block Layout documentation explains that when placing a block, you are assigning it to a region in a specific theme , not globally for all themes. So when you switch the site's default theme, the new theme may have a different set of regions or different region names, and block placements from the previous theme may no longer map correctly.

Drupal's theming documentation is even more explicit: if a theme does not define a region that blocks were assigned to, those blocks are treated as assigned to an invalid region and are disabled . The Block module documentation also states that disabled blocks (blocks not assigned to any region in your theme) are never shown . This is exactly why blocks can appear to "disappear" after changing themes.

The other options do not match Drupal's documented behavior. Blocks do not need to be "registered" with a theme in this sense, contributed themes are not limited to system blocks, and custom blocks generally do not need to be recreated just because the theme changed. The issue is the theme-specific region mapping , which makes D the correct answer.

NEW QUESTION # 17

You just installed Drupal 10 with a standard installation profile.

When you visit the User roles list, which three user roles are already available by default?

- **A. Content editor**
- B. Site builder
- **C. Authenticated user**
- **D. Administrator**
- E. Publisher

Answer: A,C,D

Explanation:

In Drupal 10 (Standard installation profile), several roles are created automatically to support common editorial workflows. These include Authenticated user , Content editor , and Administrator .

* Authenticated user is a core default role in all Drupal installations. It represents any logged-in user and is always present.

* Content editor is provided by the Standard installation profile as part of Drupal's out-of-the-box editorial workflow, allowing users to create and manage content.

* Administrator is also included and has full permissions to manage the entire site.

Options A (Site builder) and C (Publisher) are not default roles created by Drupal core or the Standard profile.

While such roles can be created manually or may appear in specific distributions, they are not included by default.

Drupal's documentation for installation profiles confirms that the Standard profile provides a pre-configured editorial setup, including roles like Content editor, in addition to the core Authenticated user and Administrator roles.

Therefore, the correct answers are B, D, and E .

NEW QUESTION # 18

Your website is showing a warning message that a contributed module "Password Policy" has a new security update.

What action will you take?

- A. Uninstall the currently installed module. Download the latest version of the module and configure it again.
- B. No action is needed as security updates are not important.
- **C. Download the latest version of the module. And visit the update.php page to complete the update.**
- D. Drupal will update and install security update automatically on the next cron run.

Answer: C

Explanation:

In Drupal 10 and Drupal 11, security updates for contributed modules must be applied promptly to protect the site from known vulnerabilities. Drupal core provides a built-in Update Manager module that notifies administrators when updates, especially security releases, are available. However, Drupal does not automatically install updates , including during cron runs, so option C is incorrect. The correct process, as documented in Drupal's official update procedures, involves downloading the latest recommended release of the module (typically via Composer or manual replacement), and then running database updates using the /update.php script or drush updb . This ensures that any schema changes required by the new version are properly applied.

Option B is incorrect because uninstalling a module is unnecessary and can lead to data loss or configuration issues. Option A is

clearly wrong, as ignoring security updates exposes the site to risks.

Therefore, the proper and documented approach is to update the module codebase and run `update.php` to finalize the update process, making option D the correct answer.

NEW QUESTION # 19

You have created a new View on the development environment.

How will you export the View to the production environment?

- A. Make the required changes to the development site. Partial export using single export option and import on the live site
- B. This requires development effort and cannot be done by Drupal admin interface
- C. Use backup and migrate module to export the view
- D. Select synchronize configurations option on production environment

Answer: A

Explanation:

In Drupal 10 and Drupal 11, a View is stored as configuration, and Drupal provides a built-in Configuration Management system to move configuration between environments. According to the official Drupal User Guide, when you want to move a single configuration item (such as a View), the recommended approach is to use the Single Export and Single Import functionality available in the admin interface.

On the development site, you navigate to Configuration # Development # Configuration synchronization # Export # Single item, select View, and copy the YAML configuration. Then, on the production site, you go to Import # Single item and paste the configuration to import it.

Option A refers to full configuration synchronization, which is typically used for complete site configuration deployment, not for a single View. Option B is incorrect because Backup and Migrate is meant for database backups, not configuration transfer. Option C is incorrect because Drupal provides a UI-based method for this task.

Thus, the correct and documented approach is partial export/import using the single configuration option, making D the correct answer.

NEW QUESTION # 20

You have created a custom block "Festival Offer" and placed this block in the header section of your site.

Your site has a "Premium customer" user role. You need to show this block only on the front page and only to users who have a "Premium customer" user role.

Which two visibility settings you need to make to the "Festival Offer" block to achieve these requirements?

- A. Remove `< front >` path in the Pages tab & select "Hide for the listed pages".
- B. Add `< front >` path in the Pages tab and select "Show for the listed pages".
- C. Select the user role "Authenticated user" from the Roles tab.
- D. Select the user role "Premium customer" from the Roles tab.

Answer: B,D

Explanation:

Drupal 10 and Drupal 11 let you control block display through visibility conditions on the block configuration form. Drupal's block management documentation explains that a block's visibility can depend on page-specific visibility settings and also on user role conditions. For page visibility, Drupal specifically notes that the front page is an exception and must be entered as `< front >`. To show a block only on the homepage, you add `< front >` in the Pages visibility settings and choose "Show for the listed pages." To limit the block to a specific audience, you use the Roles visibility condition and select the exact role that should see the block. In this case, that is Premium customer, not the broader Authenticated user role, because selecting Authenticated user would show the block to all logged-in users who have that role, not just premium customers. Drupal core's block form API also confirms that block visibility is built through configurable visibility conditions in the block UI.

So the correct combination is:

A for the role restriction, and B for the front-page-only restriction.
