ISQI ISTQB Certified Tester-Foundation Level - Usability Testing Sample Questions (Q30-Q35):

NEW QUESTION # 30

Which of the following is a principal task of the usability test moderator role?

- **A. Define testing tasks**
- B. Create a survey plan
- C. Log usability problems
- D. Write a usability test plan

Answer: A

Explanation:

The usability test moderator plays a crucial role during the execution phase of a usability test. Their principal task is to facilitate the test sessions by guiding participants through predefined testing tasks, observing behaviors, and ensuring that the test environment is neutral and free from bias. Defining testing tasks, however, is primarily done during the test design phase by the usability test designer or analyst, but the moderator ensures these tasks are clearly communicated and administered to participants during the session. Logging usability problems (option B) is often done by observers or analysts reviewing session recordings or notes, not directly by the moderator during live testing. Creating a survey plan (option C) and writing the usability test plan (option D) are preparatory activities generally done before the test sessions and are not the moderator's main focus. Therefore, the principal role of the moderator centers on conducting the sessions and managing task delivery effectively to obtain authentic user interaction with the system under test.

NEW QUESTION # 31

Which of the following is a principal task of the usability tester role?

- A. Perform pre-session briefing of participants
- B. Discuss findings from usability test
- C. Define testing tasks
- **D. Communicate with test participant**

Answer: D

Explanation:

The usability tester, often synonymous with the usability test moderator in practice, is primarily responsible for interacting directly with the test participants during the usability testing sessions. This role includes communicating with participants to guide them through test tasks, answering questions without leading responses, and ensuring the session runs smoothly. Effective communication is essential to facilitate participant comfort, elicit genuine user behaviors, and capture accurate usability data.

Performing the pre-session briefing (Option A) may be done by the usability tester but is often a shared responsibility or part of test facilitation protocols. Discussing findings (Option C) typically falls to analysts or usability experts after testing sessions are completed and data analyzed. Defining testing tasks (Option D) is usually done by test designers or analysts during test planning, not during the test execution.

Therefore, communicating with test participants during testing is a core, principal task of the usability tester role.

NEW QUESTION # 32

A "usability requirement" is:

- A. A requirement how to conduct a usability test
- B. A requirement needed to define the size of a mobile phone used in a usability test
- C. A requirement needed for a usability tester
- **D. A requirement on the usability of a component or system**

Answer: D

Explanation:

A usability requirement specifies how usable a product or component must be, often in terms of effectiveness, efficiency, and user satisfaction, as defined in ISO 9241-11. These requirements ensure that the product meets specific human-centered design goals, such as allowing users to complete tasks accurately and quickly.

Options A and C describe procedural or test setup elements, not actual usability requirements. Option B refers to personnel qualifications, which are not the same as usability requirements related to system behavior or performance.

NEW QUESTION # 33

You are asked to evaluate the usability of a software application for a law firm. Due to time and budget constraints, it is not possible to include users in the evaluation process.

Which of the following is a valid approach for evaluating the usability in this case?

- A. User surveys
- **B. Usability Review**
- C. Accessibility Evaluation
- D. Usability testing

Answer: B

Explanation:

When actual users cannot be included, a usability review (often an expert or heuristic evaluation) is the most practical method.

Trained evaluators examine the interface against usability principles and standards to identify potential issues. Surveys require user input, and usability testing cannot proceed without users.

Accessibility evaluation targets inclusivity for users with impairments, which is related but not a substitute for overall usability evaluation. Therefore, option A is the only valid method under these constraints.

NEW QUESTION # 34

Which of the following statements about usability testing is true?

- A. The preparation of a usability test is optional
- B. The conditions under which a usability test is done are irrelevant
- **C. Before the usability test sessions, a pilot usability test session can be conducted**
- D. A usability test consists of one usability test session

Answer: C

Explanation:

A pilot usability test session is a critical step prior to conducting the actual usability test. Its purpose is to ensure that the test setup, task design, and moderator instructions are clear and function as expected.

According to ISO 9241-210 and the Nielsen Norman Group's best practices, pilot testing helps detect unforeseen issues and fine-tune the process. Options A and B are incorrect because testing conditions must reflect realistic scenarios, and thorough preparation

is essential to gather meaningful usability data. Option D is also incorrect; a usability test typically consists of multiple sessions with different users to gather sufficient data for analysis. The pilot session ensures everything works smoothly before involving real participants.
