

HPE6-A78 Latest Exam Materials, Valid Exam HPE6-A78 Registration

P.S. Free & New HPE6-A78 dumps are available on Google Drive shared by ExamCost: https://drive.google.com/open?id=1Q8HMhNgDIDmA3u_RaSKkwICXkKMms624

HP HPE6-A78 Exam Dumps are one of the best ways to prepare for your HP HPE6-A78 certification exams. They offer an excellent range of study materials and practice tests that can help you become certified in no time. These HP HPE6-A78 Exam Dumps are also updated regularly to ensure that you are always up to date with the latest information.

HP HPE6-A78 exam covers a wide range of topics, including basic security concepts, network security technologies, wireless security, and firewall technologies. HPE6-A78 exam also focuses on Aruba products and technologies, such as the Aruba Mobility Controller, ClearPass Policy Manager, and ArubaOS. Candidates who pass HPE6-A78 exam will have a solid understanding of network security concepts and will be able to implement and manage Aruba-based network security solutions.

HP HPE6-A78 Exam is designed to test the knowledge and skills of individuals who are interested in becoming Aruba Certified Network Security Associates. Aruba Certified Network Security Associate Exam certification is ideal for those who want to demonstrate their proficiency in implementing security solutions for wired and wireless networks. HPE6-A78 exam covers a broad range of topics, including network security fundamentals, Aruba security technologies, and security best practices.

TOP HPE6-A78 Latest Exam Materials 100% Pass | The Best HP Valid Exam Aruba Certified Network Security Associate Exam Registration Pass for sure

Now the electronic devices are all around in our life and you can practice the HPE6-A78 exam questions with our APP version. The APP online version of our HPE6-A78 study guide is used and designed based on the web browser. Any equipment can be used if only they boost the browser. It boosts the functions to stimulate the HPE6-A78 Exam, provide the time-limited exam and correct the mistakes online. There is also a function for you to learn our HPE6-A78 exam materials offline after you practice online once. You can decide which version to choose according to your practical situation.

HP Aruba Certified Network Security Associate Exam Sample Questions (Q149-Q154):

NEW QUESTION # 149

How should admins deal with vulnerabilities that they find in their systems?

- A. They should notify the security team as soon as possible that the network has already been breached.
- B. They should classify the vulnerability as malware, a DoS attack or a phishing attack.
- C. They should add the vulnerability to their Common Vulnerabilities and Exposures (CVE).
- D. They should apply fixes, such as patches, to close the vulnerability before a hacker exploits it.

Answer: D

Explanation:

When vulnerabilities are identified in systems, it is crucial for administrators to act immediately to mitigate the risk of exploitation by attackers. The appropriate response involves applying fixes, such as software patches or configuration changes, to close the vulnerability. This proactive approach is necessary to protect the integrity, confidentiality, and availability of the system resources and data. It's important to prioritize these actions based on the severity and exploitability of the vulnerability to ensure that the most critical issues are addressed first. References:

Best practices in system security management.

NEW QUESTION # 150

You have an Aruba solution with multiple Mobility Controllers (MCs) and campus APs. You want to deploy a WPA3-Enterprise WLAN and authenticate users to Aruba ClearPass Policy Manager (CPPM) with EAP-TLS.

What is a guideline for ensuring a successful deployment?

- A. Avoid enabling CNSA mode on the WLAN, which requires the internal MC RADIUS server.
- B. Educate users in selecting strong passwords with at least 8 characters.
- **C. Deploy certificates to clients, signed by a CA that CPPM trusts.**
- D. Ensure that clients trust the root CA for the MCs' Server Certificates.

Answer: C

Explanation:

For WPA3-Enterprise with EAP-TLS, it's crucial that clients have a trusted certificate installed for the authentication process. EAP-TLS relies on a mutual exchange of certificates for authentication. Deploying client certificates signed by a CA that CPPM trusts ensures that the ClearPass Policy Manager can verify the authenticity of the client certificates during the TLS handshake process. Trust in the root CA is typically required for the server side of the authentication process, not the client side, which is covered by the client's own certificate.

NEW QUESTION # 151

You are deploying an Aruba Mobility Controller (MC). What is a best practice for setting up secure management access to the ArubaOS Web UI

- **A. Install a CA-signed certificate to use for the Web UI server certificate.**
- B. Change the default 4343 port for the web UI to TCP 443.
- C. Avoid using external manager authentication for the Web UI.
- D. Make sure to enable HTTPS for the Web UI and select the self-signed certificate installed in the factory.

Answer: A

Explanation:

For securing management access to the ArubaOS Web UI of an Aruba Mobility Controller (MC), it is a best practice to install a certificate signed by a Certificate Authority (CA). This ensures that communications between administrators and the MC are secured with trusted encryption, which greatly reduces the risk of man-in-the-middle attacks. Using a CA-signed certificate enhances the trustworthiness of the connection over self-signed certificates, which do not offer the same level of assurance.

:

ArubaOS documentation on management access security.

NEW QUESTION # 152

You have been instructed to look in the ArubaOS Security Dashboard's client list. Your goal is to find clients that belong to the company and have connected to devices that might belong to hackers. Which client fits this description?

- A. MAC address d8:50:e6:f3:6d;a4; Client Classification Authorized; AP Classification, interfering
- B. MAC address d8:50:e6:f3:6e;60; Client Classification Interfering. AP Classification Interfering
- **C. MAC address d8:50:e6:f3;TO;ab; Client Classification Interfering. AP Classification Rogue**
- D. MAC address d8:50:e6 f3:6e;c5; Client Classification Interfering. AP Classification Neighbor

Answer: C

Explanation:

In the context of the ArubaOS Security Dashboard, if the goal is to find company clients that have connected to devices potentially operated by hackers, you would look for a client that is classified as 'Interfering' (indicating a security threat) while being connected to an 'AP Classification: Rogue'. A rogue AP is one that is not under the control of network administrators and is considered malicious or a security threat. Therefore, the client fitting this description is:

MAC address: d8:50:e6:f3:70:ab; Client Classification: Interfering; AP Classification: Rogue

NEW QUESTION # 153

You have been asked to send RADIUS debug messages from an ArubaOS-CX switch to a central SIEM server at 10.5.15.6. The server is already defined on the switch with this command: logging 10.5.6.12 You enter this command: debug radius all What is the correct debug destination?

- A. syslog
- B. file
- C. buffer
- D. console

Answer: A

Explanation:

When configuring an ArubaOS-CX switch to send RADIUS debug messages to a central SIEM server, it is important to correctly direct these debug outputs. The command debug radius all activates debugging for all RADIUS processes, capturing detailed logs about RADIUS operations. If the SIEM server is already defined on the switch for logging purposes (as indicated by the command logging 10.5.6.12), the correct destination for these debug messages to be sent to the SIEM server would be through the syslog. This ensures that all generated logs are forwarded to the centralized server specified for logging, enabling consistent log management and analysis. Using syslog as the destination leverages the existing logging setup and integrates seamlessly with the network's centralized monitoring systems.

NEW QUESTION # 154

.....

It is browser-based; therefore no need to install it, and you can start practicing for the Aruba Certified Network Security Associate Exam (HPE6-A78) exam by creating the HP HPE6-A78 practice test. You don't need to install any separate software or plugin to use it on your system to practice for your actual Aruba Certified Network Security Associate Exam (HPE6-A78) exam. ExamCost Aruba Certified Network Security Associate Exam (HPE6-A78) web-based practice software is supported by all well-known browsers like Chrome, Firefox, Opera, Internet Explorer, etc.
