High-quality Free XK0-006 Braindumps & Leader in Certification Exams Materials & Free PDF XK0-006 Test Dumps Free

IT certification candidates are mostly working people. Therefore, most of the candidates did not have so much time to prepare for the exam. But they need a lot of time to participate in the certification exam training courses. This will not only lead to a waste of training costs, more importantly, the candidates wasted valuable time. Here, I recommend a good learning materials website. Some of the test data on the site is free, but more importantly is that it provides a realistic simulation exercises that can help you to pass the CompTIA XK0-006 Exam. VCETorrent CompTIA XK0-006 exammaterials can not only help you save a lot of time, but also allows you to pass the exam successfully. So you have no reason not to choose it.

CompTIA Linux+ Certification Exam Sample Questions (Q105-Q110):

NEW QUESTION # 105

An administrator has generated an RSA SSH key pair to log in to a remote server. After copying the public key and attempting to log in, the administrator sees the following message:

```
admin@192.168.10.50: Permission denied (publickey,password)
```

After seeing the message, the administrator attempts to connect using `ssh -v admin@192.168.10.50` and notices the following debug output:

```
debug1: send_pubkey_test: no mutual signature algorithm
```

Which of the following actions should the administrator take first to remediate this issue?

- A. Update permissions on the `/home/admin/.ssh` directory to 700 on the remote server.
- B. Create a new key pair by running `ssh-keygen -t ecdsa`.

- C. Issue `systemctl restart sshd` on the local server.
- D. Set `PermitRootLogin yes` in the `/etc/ssh/sshd_config` file.

Answer: B

Explanation:

The "no mutual signature algorithm" error means the RSA/SHA-1 key type (`ssh-rsa`) isn't supported by both client and server. Generating a new key with a modern algorithm (e.g., `ssh-keygen -t ecdsa`) ensures a mutually supported signature method.

NEW QUESTION # 106

Which of the following is the best use of AI within a Linux environment?

- A. Outsourcing proprietary source code development to the LLM
- B. Giving full control of the Linux server to the AI engine
- C. Generating an `nginx` configuration file that can be used for testing
- D. Uploading company internal messaging for user validation

Answer: C

Explanation:

As AI and Large Language Models (LLMs) become integrated into IT workflows, CompTIA Linux+ V8 emphasizes the responsible and secure use of these tools. AI can significantly improve administrative efficiency when used as an assistant for repetitive or boilerplate tasks, but it introduces significant security and ethical risks if not governed properly.

The best and most appropriate use of AI among the options provided is generating configuration files for testing (Option D). AI is highly effective at creating standard templates, such as NGINX server blocks, `systemd` unit files, or basic shell scripts. This allows an administrator to quickly prototype a configuration.

However, the Linux+ curriculum stresses that any AI-generated output must be reviewed, linted, and tested by a human administrator before being moved to production.

The other options represent major security or professional risks:

* Option A: Giving full control to an AI engine is a violation of the principle of accountability and poses a significant risk to system stability and security.

* Option B: Uploading internal messaging or sensitive data to a public LLM can lead to intellectual property leaks and violations of privacy regulations.

* Option C: Outsourcing proprietary source code to a public AI model exposes the company's code base to external parties and may create licensing issues.

Using AI for generating non-sensitive configuration templates for development and testing environments is the verified best practice for leveraging these technologies securely in a Linux environment.

NEW QUESTION # 107

A systems administrator is creating a backup copy of the `/home/` directory. Which of the following commands allows the administrator to archive and compress the directory at the same time?

- A. `cpio -o /backups/home.tar.xz /home/`
- B. `rsync -z /backups/home.tar.xz /home/`
- C. `dd of=/backups/home.tar.xz if=/home/`
- D. `tar -cJf /backups/home.tar.xz /home/`

Answer: D

Explanation:

The `tar -cJf` command creates (-c) an archive, compresses it with XZ (-J), and writes it to a file (-f). This allows archiving and compression of the `/home/` directory in one step.

NEW QUESTION # 108

A Linux administrator needs to add an instruction into a Dockerfile so that the process `/sbin/app-01` is executed when a new container starts. Which of the following accomplishes this task?

- A. `ONBUILD`

- B. EXPOSE
- **C. ENTRYPOINT**
- D. FROM

Answer: C

Explanation:

This instruction defines the executable that is run when a container starts, ensuring the specified process is launched automatically each time a new container is created from the image.

NEW QUESTION # 109

Which of the following is a protocol for accessing distributed directory services containing a hierarchy of users, groups, machines, and organization units?

- A. KRB-5
- B. SMB
- C. TLS
- **D. LDAP**

Answer: D

Explanation:

LDAP (Lightweight Directory Access Protocol) is specifically designed for accessing and maintaining distributed directory services that organize users, groups, computers, and organizational units in a hierarchical structure.

NEW QUESTION # 110

.....

As what have been demonstrated in the records concerning the pass rate of our XK0-006 free demo, our pass rate has kept the historical record of 98% to 99% from the very beginning of their foundation. During these years, our PDF version of our XK0-006 study engine stays true to its original purpose to pursue a higher pass rate that has never been attained in the past. And you will be content about our considerate service on our XK0-006 training guide. If you have any question, you can just contact us!
