## Pass Guaranteed Quiz 2026 HPE7-A01: Aruba Certified Campus Access Professional Exam High Hit-Rate Valid Test Answers

You may be also one of them, you may still struggling to find a high quality and high pass rate HPE7-A01 study question to prepare for your exam. Our product is elaborately composed with major questions and answers. Our study materials are choosing the key from past materials to finish our HPE7-A01 Torrent prep. It only takes you 20 hours to 30 hours to do the practice. After your effective practice, you can master the examination point from the HPE7-A01 exam torrent. Then, you will have enough confidence to pass it. So start with our HPE7-A01 torrent prep from now on.

HP HPE7-A01 (Aruba Certified Campus Access Professional) certification exam is an essential certification for IT professionals looking to validate their skills and knowledge in the field of wireless networking. Aruba Certified Campus Access Professional Exam certification exam is designed to test an individual's ability to design, deploy, and manage Aruba wireless solutions in a campus environment.

### HP Aruba Certified Campus Access Professional Exam Sample Questions (Q72-Q77):

#### NEW QUESTION # 72

Drag and Drop Question

List the firewall role derivation flow in the correct order.

The screenshot shows a drag-and-drop interface with a table of roles and an 'Order' column. The roles are: Authentication default role, Initial role assigned, Server derived role, and User derived role. The 'Order' column is currently empty. Navigation arrows are visible on the right side of the interface.

Firewall Role	Order
Authentication default role	
Initial role assigned	
Server derived role	
User derived role	

**Answer:**

Explanation:  
Firewall Role

The screenshot shows the correct order of roles in the 'Order' column: Server derived role, User derived role, Authentication default role, and Initial role assigned. Navigation arrows are visible on the right side of the interface.

Order
Server derived role
User derived role
Authentication default role
Initial role assigned

#### NEW QUESTION # 73

What is the best practice for handling voice traffic with dynamic segmentation on AOS-CX switches?

- A. Switch authentication and local forwarding of the voice traffic
- B. Controller authentication and port-based tunneling of all traffic
- C. Switch authentication and user-based tunneling of the voice traffic.
- D. Central authentication and port-based tunneling of the voice traffic.

**Answer: A**

Explanation:

This is the best practice for handling voice traffic with dynamic segmentation on AOS-CX switches. Dynamic segmentation is a feature that allows AOS-CX switches to tunnel user traffic to a controller or another switch based on user roles and policies. For voice traffic, it is recommended to use switch authentication and local forwarding, which means the voice devices are authenticated by the switch and their traffic is forwarded locally without tunneling. This reduces latency and jitter for voice traffic and improves voice quality. The other options are incorrect because they either use central authentication or tunneling, which are not optimal for voice traffic.

#### NEW QUESTION # 74

Which method is used to onboard a new UXI in an existing environment with 802.1X authentication? (The sensor has no cellular connection)

- A. Connect the new UXI from an already installed one and adjust the initial configuration.
- B. Use the Aruba installer app on your smartphone to scan the barcode
- C. Use the CLI via the serial cable and adjust the initial configuration.
- D. Use the UXI app on your smartphone and connect the UXI via Bluetooth

**Answer: D**

Explanation:

To onboard a new UXI in an existing environment with 802.1X authentication, you need to use the UXI app on your smartphone and connect the UXI via Bluetooth. The UXI app allows you to scan the QR code on the UXI sensor and configure its network settings, such as SSID, password, IP address, etc. The Bluetooth connection allows you to communicate with the UXI sensor without requiring any network access or cellular connection. The other options are incorrect because they either do not use the UXI app or do not use Bluetooth.

#### NEW QUESTION # 75

You need to create a keepalive network between two Aruba CX 8325 switches for VSX configuration. How should you establish the keepalive connection?

- A. SVI, VLAN trunk allowed all on ISL in default VRF
- B. SVI, VLAN trunk allowed all on ISL in custom VRF
- C. loopback 0 and OSPF area 0 in default VRF
- D. routed port in custom VRF

**Answer: D**

Explanation:

Explanation

To establish a keepalive connection between two Aruba CX 8325 switches for VSX configuration, you need to use a routed port in custom VRF. A routed port is a physical port that acts as a layer 3 interface and does not belong to any VLAN. A custom VRF is a virtual routing and forwarding instance that provides logical separation of routing tables. By using a routed port in custom VRF, you can isolate the keepalive traffic from other traffic and prevent routing loops or conflicts. The other options are incorrect because they either do not use a routed port or do not use a custom VRF. References:

#### NEW QUESTION # 76

Refer to the output from a CX 6100 switch:

```

show interface 1/1/51 transceiver detail
Transceiver in 1/1/51
Interface Name : 1/1/51
Type : 10G-SR / 10G SFP+ SR
Connector Type : LC
Transceiver Status : An HPE pluggable module that is supported in this interface
Wavelength : 850nm
Transfer Distance : 0.00km (SMF), 30m (OM1), 80m (OM2), 300m (OM3)
Diagnostic Support : DOM
Product Number : J9150D
Serial Number : CNXXYYNNN
Part Number : 1990-4635

Status
Temperature : 20.2188C
Voltage : 3.3133V

Lane Tx Bias      Rx Power      Tx Power
(mA)              (mW/dBm)     (mW/dBm)
-----
1 6.3640         0.0001 / -40.00  0.5052 / -2.97

Recent Alarms:
Channel 1:
Rx Power low alarm
Rx Power low warning
Rx loss of signal

```

What is the correct detail that can be observed from the output above?

- A. The dBm values for Tx are too high and affect Rx signals.
- **B. The dBm values for Rx are too low, indicating that the link is down.**
- C. The dbm values for T are too far away from 0, and the link is down.
- D. The dBm values for Rx are within acceptable values, and the link is up.

**Answer: B**

#### NEW QUESTION # 77

.....

ActualTestsQuiz provides 24/7 customer support to answer any of your queries or concerns regarding the Aruba Certified Campus Access Professional Exam (HPE7-A01) certification exam. They have a team of highly skilled and experienced professionals who have a thorough knowledge of the Aruba Certified Campus Access Professional Exam (HPE7-A01) exam questions and format. With the aim of helping aspirants to achieve the Aruba Certified Campus Access Professional Exam (HPE7-A01) certification, ActualTestsQuiz is committed to providing the best quality and updated HP HPE7-A01 exam dumps.
