試験の準備方法-100%合格率のC_BCBAI_2502日本語版サンプル試験-有 難いC_BCBAI_2502日本語対策問題集

MogiExamのITの専門研究者はSAP C_BCBAI_2502認証試験の問題と解答を研究して、彼らはあなたにとっても有効な訓練試験オンラインサービスツールを提供します。もしあなたはMogiExamの製品を購入したければ弊社が詳しい問題集を提供して、君にとって完全に準備します。弊社のMogiExam商品を安心して選択してMogiExam試験に100%合格しましょう。

SAP Certified Associate - Positioning SAP Business AI Solutions as part of SAP Business Suite 認定 C_BCBAI_2502 試験問題 (Q24-Q29):

質問 # 24

Which AI-driven capabilities are available in SAP Business AI? Note: There are 2 correct answers to this question.

- A. AI-powered fraud detection in finance
- B. Manual reconciliation of financial transactions
- C. Data input automation without AI involvement
- D. Machine Learning (ML) for automated data processing

正解: A、D

解説:

SAP Business AI provides a range of AI-driven capabilities to automate processes and enhance business outcomes. The correct answers are Machine Learning (ML) for automated data processing and AI-powered fraud detection in finance, as these are core capabilities documented in SAP's AI portfolio.

SAP documentation explains: "SAP Business AI offers capabilities such as machine learning, natural language processing, and predictive analytics to enhance decision-making, automate tasks, and improve business processes." Machine Learning (ML) for automated data processing is used in solutions like SAP Cash Application, which "intelligently extracts key payment details from unstructured documents" to automate financial data processing. AI-powered fraud detection in finance, supported by SAP AI Business Services, enables "real-time monitoring of financial transactions to identify anomalies and potential fraud," as seen in SAP S/4HANA's anomaly detection features.

The incorrect options-manual reconciliation of financial transactions and data input automation without AI involvement-are not AI-driven. Manual reconciliation contradicts SAP's automation focus, and data input automation without AI is not part of SAP Business AI's capabilities, which emphasize intelligent automation.

SAP's financial and operational AI solutions, as evidenced by case studies like SAP Cash Application, confirm the selected capabilities.

質問 # 25

Which AI-driven features in SAP S/4HANA Finance help organizations optimize financial processes? Note: There are 2 correct answers to this question.

- A. Manual financial workflow management
- B. Intelligent invoice processing automation
- C. AI-driven anomaly detection for financial fraud
- D. Predictive customer support

正解: B、C

解説:

SAP S/4HANA Finance integrates AI-driven features to streamline and secure financial processes, with AI-driven anomaly detection for financial fraud and intelligent invoice processing automation being key capabilities. These are explicitly documented as core functionalities within SAP S/4HANA Finance.

SAP documentation states: "SAP S/4HANA Finance leverages AI to optimize financial processes through capabilities like anomaly detection and intelligent automation. For example, SAP Cash Application revolutionizes payment advice processing by intelligently extracting key payment details from unstructured PDF documents." This describes intelligent invoice processing automation, which reduces manual effort and improves accuracy in financial reconciliation. Additionally, SAP S/4HANA Finance uses "AI-assisted anomaly detection" to identify potential fraud in financial transactions, enabling organizations to "proactively address risks and mitigate financial losses." This is supported by solutions like SAP Collections Management, which uses AI to prioritize high-risk accounts.

The incorrect options-manual financial workflow management and predictive customer support-are not AI-driven. Manual financial workflow management contradicts SAP's automation focus, and predictive customer support is a customer experience function, not a financial process. SAP's emphasis on AI in finance, as seen in case studies like SAP Cash Application, confirms the relevance of the selected features.

質問 # 26

What are the key Business AI patterns?

There are 3 correct answers to this question.

Response:

- A. Insight Apps, Data for AI
- B. AI Lifecycle Management
- C. Custom Generative AI Extensions
- D. Enterprise Automation
- E. Digital Assistants with SAP

正解: A、D、E

質問 # 27

(What does business AI mean? Note: There are 3 correct answers to this question.)

- A. Customer centricity
- B. Agility
- C. Enterprise data
- D. Technology foundation
- E. Processes

正解: C、D、E

解説:

Comprehensive and Detailed Explanation From Exact Extract: Business AI in SAP is defined as the combination of technology foundation (the underlying AI technology), enterprise data (the business data it leverages), and processes (the business processes it enhances and automates). This holistic approach ensures AI is embedded in business contexts for relevant, reliable, and responsible outcomes, with customer centricity and agility as resulting benefits rather than core components.

Exact extracts supporting this:

"What does SAP Business AI mean? Essentially three things: The technology it is based on. The enterprise data it is trained on. The processes it runs through."learning.sap.com Enterprise data: "Grounded in customers' business data."learning.sap.com Processes: "Embed AI features across all business processes, delivering immediate value to businesses."events.sap.com "Automating processes, and enabling predictive analytics."community.sap.com Technology foundation: "The technology it is based on."learning.sap.com "These AI functionalities are designed to help businesses automate processes, gain insights from data, improve decision-making."community.sap.com Other options are incorrect because:

Option B: Customer centricity is a benefit or principle in SAP solutions (e.g., in supply chain), but not a core definitional component of business AI.

Option D: Agility is an outcome enabled by business AI, such as increasing business agility, but not part of its fundamental definition. Reference from Positioning SAP Business AI Solutions as part of SAP Business Suite documents or Study Guide: From the SAP Learning course "Discovering SAP Business AI," specifically the unit "Explaining the role of SAP Business AI," which defines business AI as the intersection of technology, data, and processes. Supported by SAP community blogs and product overviews, aligning with C_BCBAI_2502 certification for positioning AI in the SAP Business Suite.

質問 # 28

Which SAP AI solutions enhance real-time decision-making for businesses?

There are 3 correct answers to this question.

Response:

- A. SAP Predictive Analytics
- B. SAP Extended Warehouse Management
- C. SAP Business Warehouse
- D. SAP Conversational AI
- E. SAP AI Core

正解: A、D、E
