NEW QUESTION # 45

Which command reduces the amount of time it takes to complete the ISSU on a Cisco Nexus 7000 series switch that has dual supervisor modules and two I/O modules?

- A. install all kickstart<image>system<image>
- B. install all epld bootflash:<image>
- C. install all kickstart <image>system<image>parallel
- D. install all epld bootflash:<image>

Answer: C

Explanation:

Parallel Upgrade

Parallel Upgrade with I/O Modules

Starting with Cisco NX-OS Release 5.2(1), multiple linecards can be simultaneously upgraded, and the infrastructure support is available. This decreases the ISSU time when compared with an ISSU upgrade that is done serially (one card at a time).

To start a parallel upgrade, use the following command: `install all kickstart image system image parallel`

Up to three linecards can be upgraded in parallel with this command. During the upgrade process, the upgrade of the linecards is displayed in the output as follows:

```
Non-disruptive upgrading.
[#          ] 0%
Module 5 upgrade completed successfully.
```

```
Module 3 upgrade completed successfully.

NEW QUESTION # 46

A network engineer must determine the cooling requirements for a Cisco UCS C-Series Rack Server. The server with PCIe cards is configured with a fan configuration policy. Which configuration should be used for the fan policy of the server?

- A. Option D
- **B. Option A**
- C. Option B
- D. Option C

Answer: B

NEW QUESTION # 47

An engineer is implementing an import operation in Cisco UCS Manager. What is the impact of performing this operation?

- A. An import operation can be scheduled.
- B. Only a configuration file that was exported from the same Cisco UCS Manager can be imported.
- **C. Information can be modified on the management plane only.**
- D. A configuration can be imported from a higher release to a lower release.

Answer: C

Explanation:

The import function is available for all configuration, system configuration, and logical configuration files.

You can perform an import while the system is up and running. An import operation modifies information on the management plane only. Some modifications caused by an import operation, such as a change to a vNIC assigned to a server, can cause a server reboot or other operations that disrupt traffic.
