

# Test Fortinet FCSS\_EFW\_AD-7.6 Book | Test FCSS\_EFW\_AD-7.6 Prep

P.S. Free & New FCSS\_EFW\_AD-7.6 dumps are available on Google Drive shared by Dumpcollection:  
<https://drive.google.com/open?id=1zQeCrKc7ivAvs0WPjCMrE-Fj3bJIGLvm>

There are many merits of our product on many aspects and we can guarantee the quality of our FCSS\_EFW\_AD-7.6 practice engine. Firstly, our experienced expert team compile them elaborately based on the real exam and our FCSS\_EFW\_AD-7.6 study materials can reflect the popular trend in the industry and the latest change in the theory and the practice. Secondly, both the language and the content of our FCSS\_EFW\_AD-7.6 Study Materials are simple,easy to be understood and suitable for any learners.

## Fortinet FCSS\_EFW\_AD-7.6 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>• Central Management: This section of the exam measures the skills of a Security Operations Manager and covers the implementation of centralized management systems for coordinated control and oversight of distributed Fortinet security infrastructures across enterprise environments.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>• Routing: This section of the exam measures the skills of a Network Infrastructure Engineer and covers the implementation of dynamic routing protocols for enterprise network traffic management. It includes configuring both OSPF and BGP routing protocols to ensure efficient and reliable data transmission across complex organizational networks.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>• System Configuration: This section of the exam measures the skills of a Network Security Architect and covers the implementation and integration of core Fortinet infrastructure components. It includes deploying the Security Fabric, enabling hardware acceleration, configuring high availability operational modes, and designing enterprise networks utilizing VLANs and VDOM technologies to meet specific organizational requirements.</li></ul>

Topic 4	<ul style="list-style-type: none"> <li>• Security Profiles: This section of the exam measures the skills of a Threat Prevention Specialist and covers the configuration and management of comprehensive security profiling systems. It includes implementing SSL</li> <li>• SSH inspection, combining web filtering and application control mechanisms, integrating intrusion prevention systems, and utilizing the Internet Service Database to create layered security protections for organizational networks.</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>• VPN: This section of the exam measures the skills of a VPN Solutions Engineer and covers the implementation of various virtual private network technologies. It includes configuring IPsec VPN using IKE version 2 protocols and implementing Automatic Discovery VPN solutions to establish on-demand secure tunnels between multiple sites within an enterprise network infrastructure.</li> </ul>

## Test FCSS\_EFW\_AD-7.6 Prep | Training FCSS\_EFW\_AD-7.6 Pdf

Are you an aspiring Fortinet professional looking to pass the FCSS - Enterprise Firewall 7.6 Administrator (FCSS\_EFW\_AD-7.6) exam? Look no further than our platform for real FCSS\_EFW\_AD-7.6 exam dumps. Many candidates struggle to find reliable study materials, leading them to prepare with outdated material and ultimately waste their resources. But with our platform, you can access updated Fortinet FCSS\_EFW\_AD-7.6 Practice Questions and pass the certification test on your first try. Don't let a lack of credible study materials hold you back - trust our platform to help you achieve your career goals.

## Fortinet FCSS - Enterprise Firewall 7.6 Administrator Sample Questions (Q56-Q61):

### NEW QUESTION # 56

To secure your enterprise network traffic, which step does FortiGate perform first, when handling the first packets of a session? (Choose one answer)

- A. A reverse path forwarding (RPF) check
- B. IP integrity header checking
- C. Decryption
- D. Installation of the session key in the network processor (NP)

**Answer: B**

Explanation:

Comprehensive and Detailed 150 to 200 words of Explanation From Exact Extract of Enterprise Firewall 7.6 Administrator documents:

Based on the FortiOS 7.6 Administration Guide and the Life of a Packet documentation (Parallel Path Processing), the FortiGate follows a specific, hardcoded sequence when processing the first packet of a new session. This process is divided into several stages: Ingress, Kernel, and Egress.

The very first stage is Ingress, where all packets accepted by a network interface are processed by the TCP/IP stack. Immediately following this, the packet must pass through IP integrity header checking. This step involves reading the packet headers to verify that the packet is a valid protocol (TCP, UDP, ICMP, etc.) and that the header length is correct. This sanity check is performed before any other security functions, such as decryption (which occurs later in the Ingress stage) or the Reverse Path Forwarding (RPF) check (which occurs even later during the Routing step in the Kernel stage).

Installation of the session key (Option A) only occurs after the packet has matched a firewall policy and the session has been fully established and offloaded to the NPU. Therefore, IP integrity header checking is the absolute first security-related validation performed on an incoming packet.

### NEW QUESTION # 57

What does npu\_flag=20 indicate for IPsec tunnels?

- A. Outbound only

- B. Inbound only
- C. Both SAs
- D. No offload

Answer: C

### NEW QUESTION # 58

Refer to the exhibit, which shows a network diagram.

An administrator would like to modify the MED value advertised from FortiGate\_1 to a BGP neighbor in the autonomous system 30.

What must the administrator configure on FortiGate\_1 to implement this?

- A. route-map-out
- B. prefix-list-out
- C. distribute-list-out
- D. network-import-check

Answer: A

Explanation:

The Multi-Exit Discriminator (MED) is a BGP attribute used to influence the preferred path for incoming traffic from an external autonomous system (AS). The diagram shows that FortiGate\_1 advertises MED 200, while FortiGate\_2 advertises MED 300, meaning the ISP will prefer the route through FortiGate\_1 because a lower MED is preferred in BGP.

To modify the MED value on FortiGate\_1 for routes advertised to AS 30, the administrator must configure a route-map-out. A route map can match specific routes and set the MED value before sending them to the BGP neighbor.

### NEW QUESTION # 59

Refer to the exhibit.

```
FortiGate # get router info ospf status
Routing Process "ospf 0" with ID 0.0.0.5
Process uptime is 0 minute
Process bound to VRF default
Conforms to RFC2328, and RFC1583Compatibility flag is enabled
Supports only single TOS(TOS0) routes
Supports opaque LSA
Do not support Restarting
This router is an ASBR
```

The partial output of an OSPF command is shown. You are checking the OSPF status of a FortiGate device when you receive the output shown in the exhibit. Based on the output, which two statements about FortiGate are correct? (Choose two answers)

- A. FortiGate is a backup designated router.
- B. FortiGate can inject external routing information.
- C. FortiGate supports OSPF ECMP.
- D. FortiGate is in the area 0.0.0.5.

Answer: B,C

Explanation:

Comprehensive and Detailed 150 to 200 words of Explanation From Exact Extract of Enterprise Firewall 7.6 Administrator documents:

Based on the FortiOS 7.6 Infrastructure study guide and official documentation regarding OSPF monitoring, the command output get router info ospf status provides critical details about the OSPF process.

Injecting External Information (Option D): The last line of the exhibit explicitly states, "This router is an ASBR" (Autonomous System Boundary Router). By definition in the OSPF protocol, an ASBR is a router that connects the OSPF network to another routing domain (such as BGP, Static, or Connected routes) and is responsible for injecting external routing information into the OSPF domain.

OSPF ECMP Support (Option B): The output indicates that the OSPF process "Conforms to RFC2328". RFC 2328 is the standard for OSPFv2, which includes the capability for Equal-Cost Multi-Path (ECMP). In FortiOS, the OSPF engine supports multi-path routing by default, allowing the device to utilize multiple paths to the same destination if they share the same cost.

Option A is incorrect because the output does not indicate the router's DR/BDR election status on a specific segment. Option C is incorrect because "ID 0.0.0.5" refers to the Router ID, not the OSPF Area ID.

### NEW QUESTION # 60

How does configuring tcp-mss-sender and tcp-mss-receiver affect TCP packets?

- A. Allow
- B. Header
- C. Payload
- D. Fragment

Answer: C

### NEW QUESTION # 61

.....

Up to now, there are three versions of FCSS\_EFW\_AD-7.6 exam materials for your choice. So high-quality contents and flexible choices of FCSS\_EFW\_AD-7.6 learning mode will bring about the excellent learning experience for you. Though the content of these three versions of our FCSS\_EFW\_AD-7.6 study questions is the same, their displays are totally different. And you can be surprised to find that our FCSS\_EFW\_AD-7.6 learning quiz is developed with the latest technologies as well.
