

HPE7-J01 Testing Center - Exam HPE7-J01 Study Solutions

P.S. Free 2026 HP HPE7-J01 dumps are available on Google Drive shared by Prep4SureReview: https://drive.google.com/open?id=1r_4KpThiUBWSf2O_3w_8i_xjPi6IXF-

The content of our HPE7-J01 exam questions emphasizes the focus and seizes the key to use refined HPE7-J01 questions and answers to let the learners master the most important information by using the least amount of them. And we provide varied functions to help the learners learn our HPE7-J01 Study Materials and prepare for the exam. The HPE7-J01 self-learning and self-evaluation functions help the learners find their weak links and improve them promptly.

HP HPE7-J01 Exam Syllabus Topics:

Section	Weight	Objectives
HPE Storage Solutions Integration	30%	- Integrate HPE StoreOnce with backup software - Integrate HPE Nimble Storage with network environments - Integrate HPE Primera and HPE 3PAR with SAN infrastructure - Integrate with cloud providers (AWS, Azure, GCP) - Implement data protection and disaster recovery
HPE Storage Solutions Management	20%	- Manage and monitor storage infrastructure using HPE tools - Implement performance optimization strategies - Configure quality of service (QoS) - Perform capacity planning and reporting
Troubleshooting HPE Storage Solutions	15%	- Diagnose storage connectivity issues - Perform health checks and diagnostics - Troubleshoot performance bottlenecks - Resolve data protection and replication issues
Architecting HPE Storage Solutions	35%	- Design HPE Nimble Storage solutions - Design HPE Cloud Bank target solutions - Design HPE Primera and HPE 3PAR StoreServ solutions - Design HPE StoreOnce solutions for backup and recovery - Design block, file, and object storage solutions

Exam HPE7-J01 Study Solutions & HPE7-J01 Pdf Version

You can also customize your Advanced HPE Storage Architect Solutions Written Exam (HPE7-J01) exam dumps as per your needs. We believe that this assessment of preparation is essential to ensuring that you strengthen the concepts you need to succeed. Based on the results of your self-assessment tests, you can focus on the areas that need the most improvement.

HP Advanced HPE Storage Architect Solutions Written Exam Sample Questions (Q67-Q72):

NEW QUESTION # 67

Drag and Drop Question

A company has many applications running on bare metal, as well as on VMs. Match the data protection software solution with its description. Each answer will be used once.

Answer Area	
Integrates with StoreOnce Catalyst for deduplication of data.	Cohesity
Provides a backup and recovery solution with NFS, SMB, and S3 features.	CommVault
Provides disaster recovery for only VMs.	Zerto

Answer:

Explanation:

Answer Area		
Integrates with StoreOnce Catalyst for deduplication of data.	Provides a backup and recovery solution with NFS, SMB, and S3 features.	Cohesity
Provides a backup and recovery solution with NFS, SMB, and S3 features.	Integrates with StoreOnce Catalyst for deduplication of data.	CommVault
Provides disaster recovery for only VMs.	Provides disaster recovery for only VMs.	Zerto

NEW QUESTION # 68

An HPE Partner is creating a proposal for an HPE customer that involves HPE Morpheus Enterprise. What does the partner need to determine to configure the correct number of Morpheus licenses in Online Config Advanced (OCA)?

- A. The customer VM count
- **B. The customer workload elements (WLEs) on-prem and in the public cloud**
- C. The license types are the Community Edition type
- D. The customer CPU count

Answer: B

Explanation:

HPE Morpheus Enterprise is a comprehensive multi-cloud management and orchestration platform that enables self-service provisioning and lifecycle management across private and public clouds. To accurately size and quote a Morpheus solution in tools like HPE Online Config Advanced (OCA), the primary licensing metric is the Workload Element (WLE), also frequently referred to as a Workload Element (WE) in some documentation.

A Workload Element is defined as a granular unit of compute directly associated with an application service that is being managed or inventoried by Morpheus. This includes:

- * Virtual Machines (VMs) on-premises (e.g., VMware vCenter, Hyper-V).
- * Instances in the public cloud (e.g., AWS EC2, Azure VMs, Google Cloud instances).
- * Bare metal servers if they are provisioned to run application services.
- * Container deployments (such as Kubernetes pods).

Importantly, Morpheus does not count supporting infrastructure like storage arrays, load balancers, or physical hypervisor hosts (e.g., the physical server running ESXi) as Workload Elements. Licensing is typically based on a concurrent model, meaning the customer must license the total number of WLEs under management at any given time, regardless of whether they are located on-prem or in a public cloud.

Therefore, the partner must calculate the aggregate sum of all VMs and cloud instances the customer intends to manage to ensure the license quantity in OCA is correct.

NEW QUESTION # 69

An HPE Partner is talking to a potential customer about the HPE Alletra MP B10000 storage array solution. What is an important feature the partner should share with the customer?

- A. If locally decodable EC is implemented by the customer, this will increase rebuild time.
- **B. Stripe sizes vary from 16 (data) + 3 (parity) to 146 (data) + 3 (parity).**
- C. When writing data into volatile memory, SCM is persistent with batteries.
- D. The behavior of common applications can be predicted with Workload Simulator.

Answer: B

Explanation:

The HPE Alletra MP B10000 (Block storage) represents a paradigm shift in HPE's high-end storage strategy by utilizing a modular, disaggregated architecture. One of the most significant technical advantages of this platform is its Advanced Erasure Coding and the way it handles data layout across the disaggregated NVMe capacity.

According to the HPE Alletra MP technical deep-dive documents, the system does not use traditional fixed RAID groups. Instead, it uses a massive, distributed stripe mechanism. The software is capable of varying the stripe width dynamically based on the number of available drives and nodes in the cluster. This allows the system to achieve industry-leading capacity efficiency. Specifically, the system can utilize stripe sizes ranging from a minimum of 16+3 to a maximum of 146+3. This high data-to-parity ratio (e.g., 146 data segments for every 3 parity segments) allows customers to realize significantly higher usable capacity from their raw NVMe investment compared to traditional RAID 6 (6+2 or 8+2) or even typical erasure coding in competitive mid-range arrays.

NEW QUESTION # 70

An administrator has finished installing the Zerto Virtual Manager (ZVM) appliance at a site. The administrator wants to pair the ZVM appliance with a ZVM appliance at another site. Which item is required, besides the Zerto license key, to perform this pairing?

- A. A digital certificate from a trusted PKI infrastructure
- B. A pairing asymmetric key
- C. The username and password for vCenter
- **D. A pairing token**

Answer: D

Explanation:

In modern versions of Zerto (specifically starting with Zerto 9.0 and 9.5), the security model for site pairing was significantly enhanced to move away from legacy credential sharing. To establish a secure relationship between two Zerto Virtual Managers (ZVMs), the administrator must utilize a Pairing Token.

Architecturally, the pairing process works as a "push-pull" handshake. The administrator first logs into the Target (Remote) ZVM-the site that will receive the replication-and navigates to the "Sites" tab. There, they select the option to "Generate Pairing Token." This token is a unique, time-sensitive alphanumeric string that acts as a one-time password for the pairing attempt. Once generated, the administrator copies this token and logs into the Source (Local) ZVM. During the "Pair" wizard, they specify the IP address or

FQDN of the remote ZVM and paste the pairing token.

According to the HPE Advanced Storage Solutions implementation guides, this token replaces the need for the source site to know the administrative credentials of the remote vCenter or ZVM, thereby adhering to the principle of least privilege. The token typically has a default expiration (e.g., 48 hours) or expires immediately after a successful pairing session. This ensures that even if a token is intercepted, its window of utility is minimal. Options A and B are incorrect as they represent legacy or non-standard methods; while vCenter credentials are required for the initial installation and registration of the ZVM, they are not the mechanism used for the pairing handshake itself. Option D is incorrect as Zerto manages the underlying encryption keys automatically once the pairing is authenticated via the Pairing Token.

NEW QUESTION # 71

A customer requires the highest possible random read IOPS for an OLTP database while maintaining sub-millisecond latency. Which storage media should be prioritized?

- A. LTO tape
- B. 10K SAS HDD
- C. NVMe SCM
- D. SATA SSD

Answer: C

Explanation:

NVMe Storage Class Memory (SCM) delivers extremely low latency and exceptional random IOPS, making it ideal for OLTP workloads. SAS HDD and SATA SSD cannot match its latency profile, while tape is irrelevant for transactional applications.

NEW QUESTION # 72

.....

So no matter what kinds of Advanced HPE Storage Architect Solutions Written Exam test torrent you may ask, our after sale service staffs will help you to solve your problems in the most professional way. Since our customers aiming to HPE7-J01 Study Tool is from different countries in the world, and there is definitely time difference among us, we will provide considerate online after-sale service twenty four hours a day, seven days a week, please just feel free to contact with us anywhere at any time.
