正解: B、C、E

解説:

A Starter Configuration in Oracle Fusion Cloud Applications is a prebuilt environment designed to accelerate implementation by providing foundational elements. The three features included are:

* Artificial Intelligence capabilities (A): Embedded AI features, such as predictive analytics and automation, are part of the Starter Configuration to enhance efficiency and decision-making from the outset.

* Sample master data and transaction data (B): Preloaded sample data simulates real-world scenarios, enabling users to test processes and functionalities without needing live customer data initially.

* Configuration of Oracle Cloud Applications (D): Preconfigured setups aligned with best practices ensure that core Oracle Cloud Applications are ready for use or minor adjustments.

* Customer production data (C): This is not included, as Starter Configurations focus on generic setups rather than live, customer-specific data.

* Customization of standard features (E): While customization is possible post-implementation, it is not a default feature of the Starter Configuration, which prioritizes standard configurations.

These elements support a rapid, solution-led deployment, as detailed in the Oracle ERP Foundations training.
