350-701 Latest Practice Questions & Real 350-701 Question

It is acknowledged that there are numerous 350-701 learning questions for candidates for the exam, however, it is impossible for you to summarize all of the key points in so many 350-701 study materials by yourself. But since you have clicked into this website for 350-701 Practice Guide you need not to worry about that at all because our company is especially here for you to solve this problem. Trust us and you will get what you want!

Available Certification Paths

The Cisco SCOR 350-701 Exam brings one the Cisco Certified Specialist – Security Core certificate. Also, it will take candidates closer to obtaining the CCNP Security and the CCIE Security certifications. To earn the first one, applicant should obtain the passing score in any of the six offered concentration tests. The second one requires students to pass the CCIE Security v6.0 lab exam. This certification is for candidates who want to prove they are experts in implementing and operating Cisco security technologies.

Cisco Implementing and Operating Cisco Security Core Technologies Sample Questions (Q528-Q533):

NEW QUESTION # 528

An organization has noticed an increase in malicious content downloads and wants to use Cisco Umbrella to prevent this activity for suspicious domains while allowing normal web traffic. Which action will accomplish this task?

- A. Configure the intelligent proxy.
- B. Use destination block lists.
- C. Configure application block lists.
- D. Set content settings to High

Answer: A

Explanation:

Obviously, if you allow all traffic to these risky domains, users might access malicious content, resulting in an infection or data leak. But if you block traffic, you can expect false positives, an increase in support inquiries, and thus, more headaches. By only proxying risky domains, the intelligent proxy delivers more granular visibility and control.

The intelligent proxy bridges the gap by allowing access to most known good sites without being proxied and only proxying those that pose a potential risk. The proxy then filters and blocks against specific URLs hosting malware while allowing access to everything else.

Reference: <https://docs.umbrella.com/deployment-umbrella/docs/what-is-the-intelligent-proxy>

NEW QUESTION # 529

When configuring ISAKMP for IKEv1 Phase 1 on a Cisco IOS router, an administrator needs to input the command `crypto isakmp key cisco address 0.0.0.0`. The administrator is not sure what the IP addressing in this command issued for. What would be the effect of changing the IP address from 0.0.0.0 to 1.2.3.4?

- A. The address that will be used as the crypto validation authority
- B. All IP addresses other than 1.2.3.4 will be allowed
- C. The remote connection will only be allowed from 1.2.3.4
- D. The key server that is managing the keys for the connection will be at 1.2.3.4

Answer: C

Explanation:

ExplanationThe command `crypto isakmp key cisco address 1.2.3.4` authenticates the IP address of the 1.2.3.4 peer by using the key cisco. The address of "0.0.0.0" will authenticate any address with this key

NEW QUESTION # 530

When configuring ISAKMP for IKEv1 Phase 1 on a Cisco IOS router, an administrator needs to input the command `crypto isakmp key cisco address 0.0.0.0`. The administrator is not sure what the IP address in this command is used for. What would be the effect of changing the IP address from 0,0,0 0 to 1,2,3.4?

- A. The key server that is managing the keys for the connection will be at 1.2.3.4.
- B. The address that will be used as the crypto validation authority
- C. All IP addresses other than 1.2.3.4 will be allowed
- **D. The remote connection will only be allowed from 1.2.3.4**

Answer: D

NEW QUESTION # 531

An administrator configures a new destination list in Cisco Umbrella so that the organization can block specific domains for its devices. What should be done to ensure that all subdomains of domain.com are blocked?

- **A. Configure the *.domain.com address in the block list**
- B. Configure the *.domain.com address in the block list
- C. Configure the *.com address in the block list.
- D. Configure the domain.com address in the block list

Answer: A

NEW QUESTION # 532

A Cisco AMP for Endpoints administrator configures a custom detection policy to add specific MD5 signatures. The configuration is created in the simple detection policy section, but it does not work. What is the reason for this failure?

- A. The administrator must upload the file instead of the hash for Cisco AMP to use.
- **B. Detections for MD5 signatures must be configured in the advanced custom detection policies**
- C. The APK must be uploaded for the application that the detection is intended
- D. The MD5 hash uploaded to the simple detection policy is in the incorrect format

Answer: B

Explanation:

The reason for the failure is that detections for MD5 signatures must be configured in the advanced custom detection policies, not in the simple detection policy section. The simple detection policy section allows users to create a list of SHA-256 hashes of files that they want to block or quarantine on the endpoints. The SHA-

256 hash is a more secure and unique identifier of a file than the MD5 hash, which can have collisions or duplicates. The advanced custom detection policy section allows users to create more complex and flexible rules to detect and block files based on various criteria, such as file name, size, type, signature, or MD5 hash.

The advanced custom detection policy section also supports wildcards and regular expressions to match multiple files or patterns. Therefore, if the administrator wants to add specific MD5 signatures to the custom detection policy, they should use the advanced custom detection policy section instead of the simple detection policy section.

References:

Configure a Simple Custom Detection List on the AMP for Endpoints Portal - Cisco, Step 4: On the Add SHA-256 option, paste the SHA-256 code previously collected from the specific file you want to block, as shown in the image.

Create an Advanced Custom Detection List in Cisco Secure Endpoint - Cisco, Step 3: Next, Edit that new Signature Set, and Add Signature. Win.Exploit.CVE_2020_0601:1::
