## HPE6-A86 Study Plan - Study HPE6-A86 Dumps

We all know that HPE Network Switching Associate Exam (HPE6-A86) exam dumps are an important section of the HPE6-A86 exam that is purely based on your skills, expertise, and knowledge. So, we must find quality HPE6-A86 Questions that are drafted by industry experts who have complete knowledge regarding the HPE6-A86 Certification Exam and can share the same with those who want to clear the HPE6-A86 exam. The best approach to finding HPE Network Switching Associate Exam (HPE6-A86) exam dumps is to check the Itbraindumps that is offering the HPE6-A86 practice questions.

## HPE Network Switching Associate Exam Sample Questions (Q79-Q84):

### NEW QUESTION # 79

You have configured the following on a Core-1 HPE Aruba Networking CX switch for primary and secondary ISP connectivity:

```
Core-1(config)# ip route 0.0.0.0/0 10.1.251.2
```

```
Core-1(config)# ip route 0.0.0.0/0 10.1.252.2 distance 10
```

The default route via 10.1.251.2 stopped working, and no failover happened. The ISP reported a broken fiber on the path of an upstream device.

In what condition should the route failover to the 10.1.252.2 router?

- A. When the 10.1.251.2 is no longer in the routing table.
- B. When the default route graceful-restart timer expires.
- C. When the uplink-failure-detection enables 10.1.252.2 route.
- D. When the BFD session terminates on 10.1.251.2.

**Answer: A**

Explanation:

Static route failover occurs only when the preferred static route is removed from the routing table.

If the next hop 10.1.251.2 remains reachable at Layer 2/Layer 3 on the local link, the switch keeps the primary default route installed even if there is an upstream failure, so the secondary route is not selected until the primary route is no longer present in the routing table.

#### NEW QUESTION # 80

Refer to the diagram below. After a recent network change, the helpdesk reports that some users could not connect to the print server. Server-1, which is in VLAN 20. After further investigation, you find that only devices directly connected to Access-2 are affected. Which part of the network should you investigate?

- A. The configured VLAN on Access-2 port 1/1/4.
- **B. Allowed VLANs between access switches.**
- C. The link status of Access-2 port 1/1/28.
- D. Subnet mask on clients connected to Access-2.

**Answer: B**

Explanation:

Only clients connected to Access-2 are affected, while the server is also on Access-2 in VLAN 20.

This points to VLAN 20 not being consistently carried across the inter-switch trunk after the change, so traffic from some Access-2 user ports mapped to VLAN 20 would fail to reach Server-

1. Checking the trunk's allowed VLAN list between the access switches verifies whether VLAN 20 is permitted end-to-end.

#### NEW QUESTION # 81

A customer has a skilled internal DevOps team with extensive Python programming knowledge.

Which HPE Aruba Networking CX switches would you recommend for the customer to support self-made or HPE Aruba Networking-provided scripts for onboard analytics?

- **A. CX 6200**
- B. CX 6000
- C. CX 6100
- D. CX 4100i

**Answer: A**

Explanation:

The CX 6200 series supports HPE Aruba Networking's Python-programmable OS-CX environment, enabling the use of custom scripts developed by the customer or provided by Aruba for analytics and automation. This capability aligns with the skills of a DevOps team familiar with Python.

#### NEW QUESTION # 82

Drag and Drop Question

Match the SNMP definitions to the correct term.

**Answer:**

Explanation:

Explanation:

Collects information and communicates about device configuration and status: SNMP manager Gathers and modifies network device parameters: SNMP agent Hierarchical database that stores device status, statistics, and configuration information:

Management Information Base (MIB)

Routers, switches, firewalls, wireless controllers, access points: Managed devices The SNMP manager is the system that queries devices and receives status information. The SNMP agent runs on network devices and responds to queries while allowing configuration changes. The MIB is the structured database defining the managed objects and their values.

Managed devices are the network elements being monitored and controlled through SNMP.

### NEW QUESTION # 83

A junior network engineer needs to configure a network interface with the IP address 10.1.1.1 and a subnet mask of 255.255.255.0.

Which of the following are valid ways to express this configuration on an HPE Aruba Networking CX switch? (Select all that apply.)

- A. `ip address 10.1.1.1/24`
- B. `set ip address 10.1.1.1 mask 255.255.255.0`
- C. `ipv4 address 10.1.1.1/24`
- D. `ip address 10.1.1.1/255.255.255.0`
- E. `ip address 10.1.1.1 255.255.255.0`

**Answer: A,E**

### NEW QUESTION # 84

.....

Only 20-30 hours on our HPE6-A86 learning guide are needed for the client to prepare for the test and it saves our client's time and energy. Most people may wish to use the shortest time to prepare for the test and then pass the test with our HPE6-A86 study materials successfully because they have to spend their most time and energy on their jobs, learning, family lives and other important things. Our HPE6-A86 Study Materials can satisfy their wishes and client only needs to spare little time to prepare for the HPE6-A86 test and focus their main attentions on their major things.
