질문 # 101

Which activities do local organization security policies cover for a SaaS application?

- A. how the application can transit the Internet
- **B. how the application can be used**
- C. how the application processes the data
- D. how the data is backed up in one or more locations

정답: B

설명:

Local organization security policies are the rules and guidelines that define how a SaaS application can be used by the employees, contractors, and partners of an organization. These policies cover aspects such as authentication, authorization, data access, data protection, data sharing, and compliance. Local organization security policies aim to ensure that the SaaS application is used in a secure, ethical, and legal manner, and that the organization's data and assets are not compromised or misused¹²³. 질문 # 102

Which two statements apply to the SSL/TLS protocol? (Choose two.)

- A. It contains password characters that users enter to access encrypted data.
- **B. It ensures the data that is transferred between a client and a server remains private.**
- C. It provides administrator privileges to manage and control the access of network resources.
- **D. It is a method used to encrypt data and authenticate web-based communication.**

정답: B,D

설명:

SSL/TLS encrypts and authenticates web-based communication to ensure secure data transmission over networks. It ensures privacy by encrypting the data exchanged between a client and a server, protecting it from interception or tampering. It doesn't handle user input like passwords directly.
