Splunk Core Certified Advanced Power User Latest Materials are Highly Effective to Make Use of - TestkingPass

Splunk SPLK-1004 practice questions are based on recently released Splunk SPLK-1004 exam objectives. Includes a user-

friendly interface allowing you to take the Splunk Core Certified Advanced Power User practice exam on your computers, like downloading the PDF, Web-Based SPLK-1004 Practice Test TestkingPass, and Desktop Splunk SPLK-1004 practice exam TestkingPass.

The SPLK-1004 exam is designed for candidates who have previously completed the Splunk Core Certified User certification and have hands-on experience with Splunk software. SPLK-1004 exam covers a wide range of topics, including advanced search techniques, field extraction, event correlation, data models, and advanced dashboarding. SPLK-1004 Exam also assesses the candidate's ability to troubleshoot common Splunk issues, optimize Splunk performance, and secure Splunk installations. Passing the SPLK-1004 exam indicates that the candidate has a comprehensive understanding of Splunk software and can leverage its advanced features to drive business value.

Splunk Core Certified Advanced Power User Sample Questions (Q20-Q25):

NEW QUESTION # 20
Which Job Inspector component displays the time taken to process field extractions?

- A. command.search.regex
- B. command.search.filter
- C. command.search.kv
- D. command.search.fields

Answer: C

Explanation:
The Splunk Job Inspector provides detailed metrics about the execution of search jobs, including the time taken by various components. The component responsible for measuring the time taken to apply field extractions is command.search.kv.
According to Splunk Documentation:
command.search.kv- tells how long it took to apply field extractions to the events.
This component specifically measures the duration of key-value field extraction processes during a search job.

NEW QUESTION # 21
What does using the tstats command with summariesonly=false do?

- A. Returns no results.
- B. Returns results from only non-summarized data.
- C. Returns results from both summarized and non-summarized data.
- D. Prevents the use of wildcard characters in aggregate functions.

Answer: C

Explanation:
Setting summariesonly=false in the tstats command retrieves results from both summarized (accelerated) and non-summarized (raw) data, allowing a more comprehensive analysis of both types of data in the same query.

NEW QUESTION # 22
Which of the following is true about thesummariesonly=targument of thetstatscommand?

- A. Applies only to unaccelerated data models.
- B. Applies only to accelerated data models.
- C. When using an unaccelerated data model, the search produces a larger result count than with summariesonly=f.
- D. When using an accelerated data model, the search produces a larger result count than with summariesonly=f.

Answer: B

Explanation:
Comprehensive and Detailed Step by Step Explanation:Thesummariesonly=targument of thetstats commandapplies only to accelerated data models.It ensures that the search uses only the precomputed summaries of the data model, ignoring raw data.
Here's why this works:

* Purpose of summariesonly=t: When set totrue, thetstatscommand restricts the search to use only the accelerated summaries of the data model. This improves performance but may exclude events that are not part of the summary.
* Accelerated Data Models: Acceleration creates summaries of data models, making them faster to query. Usingsummariesonly=tensures that only these summaries are queried, avoiding raw data entirely.
Other options explained:
* Option B: Incorrect becausesummariesonly=tdoes not apply to unaccelerated data models; it requires acceleration to function.
* Option C: Incorrect becausesummariesonly=tapplies only to accelerated data models, not unaccelerated ones.
* Option D: Incorrect becausesummariesonly=ttypically produces fewer results, as it excludes raw data that is not part of the summary.
Example:
| tstats count WHERE index=_internal summariesonly=t BY sourcetype
This query uses only the accelerated summaries of the_internalindex.

NEW QUESTION # 23
Which of the following fields are provided by the fieldsummary command? (Select all that apply)

- A. mean
- B. dc
- C. stdev
- D. count

Answer: B,D

Explanation:
The fieldsummary command provides statistical summaries of fields, including the count of events containing the field (count) and the distinct count of field values (dc). Standard deviation (stdev) and mean are not provided by fieldsummary, but can be calculated using commands like stats.

NEW QUESTION # 24
Which command processes a template for a set of related fields?

- A. bin
- B. foreach
- C. untable
- D. xyseries

Answer: B

Explanation:
The foreach command applies a processing step to each field in a set of related fields. It allows repetitive operations to be applied to multiple fields in one go, streamlining tasks across several fields.
