So, that users get awareness of their CompTIA Cloud Essentials+ Certification Exam (CLO-002) preparation status and remove their mistakes.

CompTIA Cloud Essentials+ Certification Exam Sample Questions (Q235-

Q240):

NEW QUESTION # 235

An administrator is planning to implement multipathing for IP-based storage. Which of the following protocols can be used in this configuration?

- A. NFS
- B. FC
- C. FCoE
- **D. iSCSI**

Answer: D

NEW QUESTION # 236

Which of the following security objectives is MOST improved when moving a system to the cloud?

- A. Integrity
- B. Confidentiality
- C. Privacy
- **D. Availability**

Answer: D

Explanation:

Availability is one of the security objectives that refers to the ability of authorized users to access and use the system and its resources when needed¹. Availability is most improved when moving a system to the cloud, as cloud computing offers several benefits that enhance the reliability and accessibility of the system, such as²³:

Scalability: Cloud computing allows the system to dynamically adjust the amount of resources allocated to meet the changing demand, without affecting the performance or availability of the system.

Redundancy: Cloud computing provides multiple copies of the system and its data across different locations and servers, ensuring that the system can continue to operate even if one or more components fail.

Backup and recovery: Cloud computing enables the system to regularly backup the data and configuration to the cloud, and restore them quickly in case of a disaster or a failure.

Maintenance and updates: Cloud computing allows the system to receive timely and automatic updates and patches from the cloud provider, without disrupting the availability of the system or requiring downtime.

Service level agreements: Cloud computing offers service level agreements (SLAs) that guarantee a certain level of availability and uptime for the system, and provide compensation or remediation in case of a breach. Cloud Security Defined; 3: Spiceworks, What Is Cloud Computing Security? Definition, Risks, and Security Best Practices

NEW QUESTION # 237

Which of the following risk response strategies is the shared responsibility model an example of?

- A. Avoidance
- B. Acceptance
- **C. Transference**
- D. Mitigation

Answer: C

Explanation:

The shared responsibility model is an example of transference, where the responsibility for managing certain risks (such as security, data protection, and infrastructure management) is shared between the cloud service provider (CSP) and the customer. The cloud provider typically manages the infrastructure and certain security aspects, while the customer is responsible for securing their data, applications, and other aspects in the cloud. This model effectively transfers part of the responsibility for managing risks to the cloud provider.

NEW QUESTION # 238

Which of the following is a benefit of microservice applications in a cloud environment?

- A. Microservice applications use orchestration solutions to update components in each service.
- B. Microservices are dependent on external shared databases found on cloud solutions.
- C. Federation is a mandatory component for an optimized microservice deployment.
- **D. The architecture of microservice applications allows the use of auto-scaling.**

Answer: D

NEW QUESTION # 239

Using https instead of http for accessing a cloud service is considered more secure.

- A. False
- **B. True**

Answer: B

NEW QUESTION # 240

.....

If you are worried about your exam, and want to pass the exam just one time, we can do that for you.
