All 3V0-21.23 exam questions are available at an affordable cost and fulfill all your training needs. TorrentExam knows that applicants of the 3V0-21.23 examination are different from each other. Each candidate has different study styles and that's why we offer our VMware vSphere 8.x Advanced Design 3V0-21.23 product in three formats. These formats are VMware 3V0-21.23 PDF, desktop practice test software, and web-based practice exam.

VMware 3V0-21.23 Exam Syllabus Topics:

Topic	Details
Topic 1	• Plan and Design the VMware Solution: This part targets Solution Designers, evaluating their ability to gather business objectives, create conceptual models based on these objectives, develop logical designs, and translate them into physical designs that meet specific requirements like manageability or security.
Topic 2	• IT Architectures, Technologies, Standards: This section of the exam measures the skills of IT Architects and covers differentiating between business and technical requirements, as well as conceptual, logical, and physical design. A key skill measured is "Designing System Availability."

Topic 3	• VMware Products and Solutions: Targeting VMware Engineers, this section describes VMware Cloud Foundation architecture, its components like vSphere and NSX, benefits such as automation and scalability, and use cases like hybrid cloud environments. It assesses understanding of VMware Validated Solutions.

VMware vSphere 8.x Advanced Design Sample Questions (Q90-Q95):

NEW QUESTION # 90
What is the purpose of creating a vSphere network logical design?

- A. To ensure the design meets the required industry regulations and standards.
- B. To identify the specific tasks and operations vSphere networking should perform.
- C. To determine the hardware and infrastructure requirements for vSphere networking.
- D. To provide an abstract representation of vSphere networking components and their interconnections.

Answer: D

NEW QUESTION # 91
How are workload and management clusters different?

- A. Workload clusters are deployed in multiple data centers, while management clusters are only used in a single data center.
- B. Workload clusters handle resource management, while management clusters focus on security and compliance.
- C. Workload clusters are used for running virtual machines, while management clusters are used for vCenter Server and other management components.
- D. Workload clusters are only used for development environments, while management clusters are used for production environments.

Answer: C

NEW QUESTION # 92
An architect is tasked with recommending a solution for a company that is running out of VLANs.
Currently the company is running two separate data centers based on vSphere including an Enterprise Plus license.
In the first data center, the problem was solved by using VMware NSX and overlay network. In the second data center, there is currently no VMware NSX implementation in place and no budget for additional licenses.
What should the architect recommend as a potential solution to provide support for additional VLANs?

- A. Virtual Guest Tagging (VGT)
- B. vSwitch VLAN Tagging (VST)
- C. Private VLANs (PVLAN)
- D. Separate Distributed Virtual Switches (DVS)

Answer: C

Explanation:
Private VLAN configuration allows for higher VLAN limits.

NEW QUESTION # 93
An architect is responsible for extending the hosting design for a customer. The customer has a mission- critical 3-node application which is load balanced in an active/active/passive configuration. The application administrator requests that the virtual infrastructure team be responsible for maintaining platform level availability. An organizational policy exists to mandate the highest possible availability for mission-critical applications.
Based on the resource requirements, the architect has made the following design decision:
The target vSphere cluster contains three VMware ESXi host servers
A combination of which additional four physical design decisions should the architect make to maximize availability of the application? (Choose four.)

- A. The solution will enable vSphere Fault Tolerance with vSphere High Availability (HA) virtual machine component failure enabled.
- B. The solution will create a host DRS group containing all hosts within the cluster.
- C. The solution will create a VM-Host Affinity rule that specifies that workloads must run on hosts in a group.
- D. The solution will enable vSphere High Availability (HA) with restart priority set to "Highest" for the application virtual machines.
- E. The solution will create a virtual machine DRS group that contains all of the critical application workloads.
- F. The solution will create a VM-VM Affinity rule to keep virtual machines separate.
- G. The solution will create a VM-VM Affinity rule to keep virtual machines together.

Answer: B,D,E,F

NEW QUESTION # 94
An architect is designing a new greenfield environment with 600 ESXi hosts in an automated fashion. The engineering department already has a PXE Boot server, TFTP server, and DHCP server set up with an NFS mount for their current Linux servers. The architect must be able to demonstrate and meet a security requirement to have all infrastructure processes separated.
Which recommendation should the architect make for the ESXi host deployment?

- A. Deploy each ESXi host individually and document it to satisfy security requirements
- B. Request a common shared network with flexible security measures to accommodate different auto deployment options
- C. Request an isolated network segment to use and dedicate it to Auto Deploy functions
- D. Ask the business to expand the engineering environment to service the virtual environment as well

Answer: C

NEW QUESTION # 95
