Networking

Public Cloud Providers offer services that fall into four broad categories:

- Compute Resources
- Storage
- Networking
- {...} (such as Machine Learning Services)

Specialized services

Public clouds offer a few types of storage services that are useful for a wide range of application requirements. These types include the following:

- {...}
- File storage
- Block storage
- Caches

Object storage

Public clouds offer a few types of storage services that are useful for a wide range of application requirements. These types include the following:

- Object storage
- {...}
- Block storage
- Caches

File storage

Public clouds offer a few types of storage services that are useful for a wide range of application requirements. These types include the following:

- Object storage

P.S. Free 2026 Google Associate-Cloud-Engineer dumps are available on Google Drive shared by VCE4Plus:
<https://drive.google.com/open?id=1bT2Ju79BIzt61UsXKlkZQLns0WZc2F7B>

VCE4Plus release the best high-quality Google Associate-Cloud-Engineer exam original questions to help you most candidates pass exams and achieve their goal surely. our Google Associate-Cloud-Engineer Materials can help you pass exam one-shot. VCE4Plus sells high passing-rate preparation products before the real test for candidates.

Beware that the sections of the exam change from time to time. Therefore, be alert by checking the updates frequently. It will prevent you from wasting time, material expenses, and inner peace. VCE4Plus has another special deal as well. It will provide you with the Google Associate-Cloud-Engineer Dumps latest updates until 365 days after purchasing the Associate-Cloud-Engineer exam questions.

High-Quality Associate-Cloud-Engineer Study Test & Correct New Associate-Cloud-Engineer Exam Camp: Google Associate Cloud Engineer Exam

It is quite clear that many people would like to fall back on the most authoritative company no matter when they have any question about preparing for Associate-Cloud-Engineer exam or met with any problem. I am proud to tell you that our company is definitely one of the most authoritative companies in the international market for Associate-Cloud-Engineer exam. What's more, we will

provide the most considerate after sale service for our customers in twenty four hours a day seven days a week, therefore, our company is really the best choice for you to buy the Associate-Cloud-Engineer Training Materials. You can just feel rest assured that our after sale service staffs are always here waiting for offering you our services. Please feel free to contact us. We stand ready to serve you!

Google Associate Cloud Engineer Exam Sample Questions (Q141-Q146):

NEW QUESTION # 141

You are building a product on top of Google Kubernetes Engine (GKE). You have a single GKE cluster. For each of your customers, a Pod is running in that cluster, and your customers can run arbitrary code inside their Pod. You want to maximize the isolation between your customers' Pods. What should you do?

- A. Use Binary Authorization and whitelist only the container images used by your customers' Pods.
- B. Use the Container Analysis API to detect vulnerabilities in the containers used by your customers' Pods.
- C. Create a GKE node pool with a sandbox type configured to gvisor. Add the parameter `runtimeClassName: gvisor` to the specification of your customers' Pods.
- D. Use the `cos_containerd` image for your GKE nodes. Add a nodeSelector with the value `cloud.google.com/gke-os-distribution: cos_containerd` to the specification of your customers' Pods.

Answer: C

Explanation:

Reference:

GKE Sandbox provides an extra layer of security to prevent untrusted code from affecting the host kernel on your cluster nodes when containers in the Pod execute unknown or untrusted code. Multi-tenant clusters and clusters whose containers run untrusted workloads are more exposed to security vulnerabilities than other clusters. Examples include SaaS providers, web-hosting providers, or other organizations that allow their users to upload and run code. When you enable GKE Sandbox on a node pool, a sandbox is created for each Pod running on a node in that node pool. In addition, nodes running sandboxed Pods are prevented from accessing other Google Cloud services or cluster metadata. Each sandbox uses its own userspace kernel. With this in mind, you can make decisions about how to group your containers into Pods, based on the level of isolation you require and the characteristics of your applications.

Ref: <https://cloud.google.com/kubernetes-engine/docs/concepts/sandbox-pods>

NEW QUESTION # 142

The core business of your company is to rent out construction equipment at a large scale. All the equipment that is being rented out has been equipped with multiple sensors that send event information every few seconds. These signals can vary from engine status, distance traveled, fuel level, and more. Customers are billed based on the consumption monitored by these sensors. You expect high throughput - up to thousands of events per hour per device - and need to retrieve consistent data based on the time of the event. Storing and retrieving individual signals should be atomic. What should you do?

- A. Create a file in Cloud Filestore per device and append new data to that file.
- B. Create a file in Cloud Storage per device and append new data to that file.
- C. Ingest the data into Cloud Bigtable. Create a row key based on the event timestamp.
- D. Ingest the data into Datastore. Store data in an entity group based on the device.

Answer: C

NEW QUESTION # 143

You have one project called `proj-sa` where you manage all your service accounts. You want to be able to use a service account from this project to take snapshots of VMs running in another project called `proj-vm`. What should you do?

- A. Grant the service account the IAM Role of `Compute Storage Admin` in the project called `proj-vm`.
- B. Download the private key from the service account, and add it to each VMs custom metadata.
- C. When creating the VMs, set the service account's API scope for Compute Engine to `read/write`.
- D. Download the private key from the service account, and add the private key to each VM's SSH keys.

Answer: A

NEW QUESTION # 144

Your management has asked an external auditor to review all the resources in a specific project. The security team has enabled the Organization Policy called Domain Restricted Sharing on the organization node by specifying only your Cloud Identity domain. You want the auditor to only be able to view, but not modify, the resources in that project. What should you do?

- A. Create a temporary account for the auditor in Cloud Identity, and give that account the Security Reviewer role on the project.
- B. Ask the auditor for their Google account, and give them the Viewer role on the project.
- C. Ask the auditor for their Google account, and give them the Security Reviewer role on the project.
- **D. Create a temporary account for the auditor in Cloud Identity, and give that account the Viewer role on the project.**

Answer: D

NEW QUESTION # 145

You are building a product on top of Google Kubernetes Engine (GKE). You have a single GKE cluster. For each of your customers, a Pod is running in that cluster, and your customers can run arbitrary code inside their Pod. You want to maximize the isolation between your customers' Pods. What should you do?

- A. Use Binary Authorization and whitelist only the container images used by your customers' Pods.
- B. Use the Container Analysis API to detect vulnerabilities in the containers used by your customers' Pods.
- **C. Create a GKE node pool with a sandbox type configured to gvisor. Add the parameter runtimeClassName: gvisor to the specification of your customers' Pods.**
- D. Use the cos_containerdimage for your GKE nodes. Add a nodeSelector with the value cloud.google.com/gke-os-distribution: cos_containerd to the specification of your customers' Pods.

Answer: C

Explanation:

You can enable GKE Sandbox on your cluster to isolate untrusted workloads in sandboxes on the node. GKE Sandbox is built using gVisor, an open source project.
