Juniper Mist AI Wired, Specialist (JNCIS-MistAI-Wired) Sample Questions (Q53-Q58):

NEW QUESTION # 53

You want a Juniper cloud-ready switch to connect to the Juniper Mist Cloud. In this scenario, which two statements are correct? (Choose two.)

- A. The switch must be running Junos OS version 23.2 or higher.

- B. The switch needs outbound connectivity to the Juniper Mist Cloud using either TCP port 2200 or port 443.
- C. The switch must connect to the Juniper Agile Licensing Portal.
- D. The switch must connect to a DNS server.

Answer: B,D

Explanation:

For Juniper cloud-ready EX Series switches (EX2300, EX3400, EX4100, EX4400, etc.) to successfully onboard to the Juniper Mist Cloud, specific connectivity requirements must be met:

"Cloud-managed EX switches require outbound connectivity to the Mist Cloud on TCP ports 2200 or 443.

Switches must also have access to DNS services to resolve cloud service URLs during onboarding." Option A: Incorrect - minimum version depends on switch model; older models may onboard with earlier releases (e.g., 20.x, 21.x).

Option B: Correct - outbound TCP 2200 or 443 connectivity is required for cloud registration.

Option C: Incorrect - switches connect directly to Mist Cloud, not the Agile Licensing Portal.

Option D: Correct - DNS resolution is mandatory for discovering Mist Cloud endpoints.

NEW QUESTION # 54

You are asked to identify whether your wired network is experiencing issues with jitter.

Which Juniper Mist Wired Assurance service-level expectation (SLE) metric provides these details?

- A. Switch Health
- B. Capacity
- C. Successful Connect
- D. Throughput

Answer: D

Explanation:

In Juniper Mist Wired Assurance, SLEs (Service Level Expectations) measure key performance indicators for wired network quality. Throughput SLE monitors data transfer quality, including latency, jitter, and packet loss, which directly impact real-time applications such as voice or video.

"The Throughput SLE provides visibility into end-to-end network performance by tracking latency, jitter, and packet loss, helping identify congestion or quality issues across wired connections." Option A (Throughput): Correct - this SLE includes jitter measurement.

Option B (Successful Connect): Tracks client connection success rate, not jitter.

Option C (Capacity): Monitors link utilization and load, not jitter.

Option D (Switch Health): Monitors device hardware and software health, not traffic performance.
