

# 1Z0-1072-25 Fragenkatalog, 1Z0-1072-25 Antworten

Laden Sie die neuesten ZertFragen 1Z0-1072-25 PDF-Versionen von Prüfungsfragen kostenlos von Google Drive herunter:  
[https://drive.google.com/open?id=1DIBCQvgPZnUAydJhBO\\_MkcOAcpr6c7Ey](https://drive.google.com/open?id=1DIBCQvgPZnUAydJhBO_MkcOAcpr6c7Ey)

Suchen Sie nach die geeignetsten Prüfungsunterlagen der Oracle 1Z0-1072-25? Sorgen Sie noch um das Ordnen der Unterlagen? ZertFragen als ein professioneller Lieferant der Software der IT-Zertifizierungsprüfung haben Ihnen die umfassendsten Unterlagen der Oracle 1Z0-1072-25 vorbereitet. Jetzt können Sie Zeit fürs Suchen gespart und direkt auf die Oracle 1Z0-1072-25 Prüfung vorbereiten!

Die Oracle 1Z0-1072-25 Zertifizierungsprüfung zu bestehen ist nicht einfach. Die richtige Ausbildung zu wählen ist der erste Schritt zu Ihrem Erfolg. Und eine zuverlässige Informationsquelle zu wählen ist die Garantie für den Erfolg. ZertFragen hat gute und zuverlässige Informationsquellen. Wenn Sie Produkte von ZertFragen wählen, versprechen wir Ihnen nicht nur, die Oracle 1Z0-1072-25 Zertifizierungsprüfung 100% zu bestehen, sondern Ihnen auch einen einjährigen kostenlosen Update-Service zu bieten.

## 1Z0-1072-25 Schulungsangebot, 1Z0-1072-25 Testing Engine, Oracle Cloud Infrastructure 2025 Architect Associate Trainingsunterlagen

IT-Fachleute sind sehr beliebt. Aber die Konkurrenz ist zugleich auch sehr heftig. So beteiligen sich viele IT-Fachleute an der autoritären Oracle 1Z0-1072-25 IT-Zertifizierungsprüfung, um Ihre Position zu konsolidieren. Und unser ZertFragen bietet speziell Bequemlichkeiten für den Oracle 1Z0-1072-25 Kandidaten.

### Oracle 1Z0-1072-25 Prüfungsplan:

Thema	Einzelheiten
Thema 1	<ul style="list-style-type: none"> <li>• Compute: This section measures skills of cloud architects responsible for designing scalable and resilient infrastructure, covering compute instance configuration, autoscaling policies, and OS management. It evaluates understanding of OCI compute image options, infrastructure maintenance processes, and strategies for optimizing instance performance across availability domains.</li> </ul>
Thema 2	<ul style="list-style-type: none"> <li>• Identity and Access Management (IAM): This domain validates skills of security architects implementing granular access controls, emphasizing IAM policy creation, compartment organization, and dynamic group configuration. It covers identity domain management, network source restrictions, and tag-based access mechanisms to enforce least-privilege principles across OCI resources</li> </ul>
Thema 3	<ul style="list-style-type: none"> <li>• Networking: Targeting network architects designing secure cloud architectures, this domain focuses on Virtual Cloud Network (VCN) implementation, including subnet design, IP address management, and routing through gateways (NAT, service, internet). It assesses expertise in VPN</li> <li>• FastConnect deployment, DNS configuration, load balancer setup, and advanced tools like Network Path Analyzer for troubleshooting latency or connectivity issues.</li> </ul>

Thema 4	<ul style="list-style-type: none"> <li>• Storage: Designed for storage administrators managing enterprise data solutions, this section tests proficiency in deploying Block</li> <li>• File</li> <li>• Object Storage with lifecycle management, cross-region replication, and tiered storage strategies. It includes configuring volume groups, snapshots, versioning, and security controls while analyzing storage performance metrics and cost optimization techniques.</li> </ul>
---------	--

## Oracle Cloud Infrastructure 2025 Architect Associate 1Z0-1072-25 Prüfungsfragen mit Lösungen (Q44-Q49):

### 44. Frage

How can OCI IAM be configured to facilitate cross-region access?

- A. The administrator can grant users permissions to access specific resources in the other region.
- B. Identity domain replication must be enabled.
- C. Users can access resources in all regions by default.
- D. The identity domain automatically replicates to the other region.

**Antwort: A**

Begründung:

In Oracle Cloud Infrastructure (OCI), cross-region access is facilitated by configuring IAM policies that grant users or groups permissions to access resources in other regions. IAM policies in OCI are global, meaning they apply across all regions by default. However, an administrator can specifically configure these policies to allow or restrict access to resources in different regions. Example: An administrator can write a policy that allows a user to manage compute instances in a specific region by including the region's name in the policy statement.

Reference:

Oracle Cloud Infrastructure Documentation: IAM Policies

### 45. Frage

What would happen if you choose not to proactively reboot the instance before the scheduled maintenance due date?

- A. You will receive another notification to reboot within the next 7 days.
- B. The instance will get terminated.
- C. You will receive another notification to reboot within the next 14 days.
- D. The instance is either reboot-migrated or rebuilt in place for you.

**Antwort: D**

Begründung:

In OCI, if you choose not to proactively reboot your instance before the scheduled maintenance due date, the system will handle the maintenance automatically to ensure that the instance remains operational.

Reboot-Migration or Rebuild in Place: If you don't reboot the instance yourself, OCI will automatically perform a reboot-migration or rebuild in place for the instance. This ensures that the instance is moved to new hardware or updated without your intervention, maintaining uptime and applying necessary updates or fixes.

Impact on Instance: The exact action taken (reboot-migration or rebuild in place) depends on the type of maintenance required.

However, either action will temporarily interrupt the instance, typically involving a reboot, but the instance's data and configuration will be preserved.

Relevant OCI Documentation:

Instance Maintenance

OCI Maintenance Events

These references discuss the procedures and options available for handling instance maintenance in OCI.

### 46. Frage

What is the primary function of the Network Path Analyzer (NPA) tool provided by Oracle Cloud Infrastructure (OCI)?

- A. Collecting and analyzing network configuration to identify virtual network configuration issues impacting connectivity
- B. Providing real-time monitoring of network traffic to detect security threats and unauthorized access attempts
- C. Sending actual traffic between source and destination to diagnose connectivity issues
- D. Optimizing network performance by dynamically adjusting routing paths based on traffic patterns

**Antwort: A**

Begründung:

The primary function of the Network Path Analyzer (NPA) tool in Oracle Cloud Infrastructure (OCI) is to help users troubleshoot and diagnose network connectivity issues by analyzing the network path between a source and a destination within OCI. The tool collects and analyzes the configuration of the virtual network, identifying any misconfigurations or issues that might impact connectivity.

NPA Usage: The Network Path Analyzer allows administrators to trace the network path and check for issues such as incorrect security list rules, route table misconfigurations, or any other factors that could prevent network traffic from reaching its destination.

Reference:

Oracle Cloud Infrastructure Documentation: Network Path Analyzer

#### 47. Frage

Which authentication option should you use to ensure third-party APIs communicate with OCI resources?

- A. SSH Key Pair with 2048-bit algorithm
- B. API Signing Key
- C. Auth Tokens
- D. OCI Username and Password

**Antwort: B**

Begründung:

When ensuring that third-party APIs communicate securely with OCI resources, the appropriate authentication option is API Signing Key.

API Signing Key: This method uses an RSA key pair to authenticate and sign API requests. The API signing key provides a secure and reliable way to ensure that the API requests to OCI are coming from an authorized source. It is commonly used for programmatic access to OCI services.

Other Options:

SSH Key Pair: Primarily used for secure shell access to compute instances, not for API authentication.

Auth Tokens: Typically used for authentication in environments where APIs don't support the API Signing Key, such as OCI CLI or SDKs.

OCI Username and Password: Generally used for the Console login, not for securing API communications.

Relevant OCI Documentation:

API Signing Key Authentication

This documentation provides details on using API Signing Keys for secure API communication in OCI.

#### 48. Frage

Which TWO statements about the Oracle Cloud Infrastructure (OCI) File Storage Service are accurate?

- A. Customers can encrypt the communication to a mount target via export options.
- B. File systems use Oracle-managed keys by default.
- C. Customers can encrypt data in their file system using their own Vault encryption key.
- D. Communication with file systems in a mount target is encrypted via HTTPS.

**Antwort: B,C**

Begründung:

Oracle Cloud Infrastructure (OCI) File Storage Service offers robust encryption capabilities to ensure data security.

B. Customer-Managed Encryption: Customers can choose to encrypt their data using their own keys stored in the OCI Vault service. This gives customers control over their encryption keys and enhances data security.

D. Oracle-Managed Encryption: By default, all data stored in OCI File Storage is encrypted using Oracle-managed keys. This ensures that data is encrypted at rest without requiring any action from the customer.

Incorrect Statements:

A . Communication is not encrypted via HTTPS when accessing file systems; instead, encryption in transit is typically managed via NFS over TLS.

C . Encryption of communication to a mount target is handled via network configurations, not through export options.
