

# CAS-005 Dump Collection, Practice CAS-005 Exam

DOWNLOAD the newest Pass4sureCert CAS-005 PDF dumps from Cloud Storage for free: <https://drive.google.com/open?id=1749EptHTTrfTcMSON6z9UamEfi5GCHJ9g>

Many people may worry that the CAS-005 guide torrent is not enough for them to practice and the update is slowly. We guarantee you that our experts check whether the CAS-005 study materials is updated or not every day and if there is the update the system will send the update to the client automatically. So you have no the necessity to worry that you don't have latest CAS-005 Exam Torrent to practice. We provide the best service to you and hope you are satisfied with our CAS-005 exam questions and our service.

Pass4sureCert is the website that provides all candidates with IT certification exam dumps and can help all candidates pass their exam with ease. Pass4sureCert IT expert edits all-time exam materials together on the basis of flexibly using the experiences of forefathers, thereby writing the best CompTIA CAS-005 Certification Training dumps. The exam dumps include all questions that can appear in the real exam. So it can guarantee you must pass your exam at the first time.

## Practice CAS-005 Exam - CAS-005 Test Valid

Windows computers support the desktop practice test software. Pass4sureCert has a complete support team to fix issues of CompTIA CAS-005 PRACTICE TEST software users. Pass4sureCert practice tests (desktop and web-based) produce score report at the end of each attempt. So, that users get awareness of their CompTIA SecurityX Certification Exam (CAS-005)

preparation status and remove their mistakes.

## CompTIA SecurityX Certification Exam Sample Questions (Q514-Q519):

### NEW QUESTION # 514

Which of the following is a security concern for DNP3?

- A. It is an open source protocol.
- B. Free-form messages require support.
- **C. Authentication is not allocated.**
- D. Available function codes are not standardized.

**Answer: C**

Explanation:

Original DNP3 lacks built-in authentication for its messages, making it vulnerable to spoofing and replay attacks. Secure extensions (Secure DNP3) add cryptographic authentication, but legacy deployments without these extensions remain at risk.

### NEW QUESTION # 515

A malware researcher has discovered a credential stealer is looking at a specific memory register to harvest passwords that will be used later for lateral movement in corporate networks. The malware is using TCP 4444 to communicate with other workstations. The lateral movement would be best mitigated by:

- A. Configuring the CPU's NX bit
- **B. Enabling a host firewall**
- C. Enforcing all systems to use UEFI
- D. Enabling ASLR on the Active Directory server
- E. Enabling an edge firewall

**Answer: B**

### NEW QUESTION # 516

An organization has been using self-managed encryption keys rather than the free keys managed by the cloud provider. The Chief Information Security Officer (CISO) reviews the monthly bill and realizes the self-managed keys are more costly than anticipated. Which of the following should the CISO recommend to reduce costs while maintaining a strong security posture?

- **A. Adjust the configuration for cloud provider keys on data that is classified as public.**
- B. Begin using cloud-managed keys on all new resources deployed in the cloud.
- C. Extend the key rotation period to one year so that the cloud provider can use cached keys.
- D. Utilize an on-premises HSM to locally manage keys.

**Answer: A**

Explanation:

Comprehensive and Detailed Step by Step

Understanding the Scenario: The organization is using customer-managed encryption keys in the cloud, which is more expensive than using the cloud provider's free managed keys. The CISO needs to find a way to reduce costs without significantly weakening the security posture.

Analyzing the Answer Choices:

A :Utilize an on-premises HSM to locally manage keys: While on-premises HSMs offer strong security, they introduce additional costs and complexity (procurement, maintenance, etc.). This option is unlikely to reduce costs compared to cloud-based key management.

B :Adjust the configuration for cloud provider keys on data that is classified as public: This is the most practical and cost-effective approach. Data classified as public doesn't require the same level of protection as sensitive data. Using the cloud provider's free managed keys for public data can significantly reduce costs without compromising security, as the data is intended to be publicly accessible anyway.

Reference:

C : Begin using cloud-managed keys on all new resources deployed in the cloud: While this would reduce costs, it's a broad approach that doesn't consider the sensitivity of the data. Applying cloud-managed keys to sensitive data might not be acceptable

from a security standpoint.

D : Extend the key rotation period to one year so that the cloud provider can use cached keys: Extending the key rotation period weakens security. Frequent key rotation is a security best practice to limit the impact of a potential key compromise.

Risk-Based Approach: Using cloud-provider-managed keys for public data is a reasonable risk-based decision. Public data, by definition, is not confidential.

Cost Optimization: This directly addresses the CISO's concern about cost, as cloud-provider-managed keys are often free or significantly cheaper.

Security Balance: It maintains a strong security posture for sensitive data by continuing to use customer-managed keys where appropriate, while optimizing costs for less sensitive data.

CASP+ Relevance: This approach demonstrates an understanding of risk management, data classification, and cost-benefit analysis in security decision-making, all of which are important topics in CASP+.

Elaboration on Data Classification:

Data Classification Policy: Organizations should have a clear data classification policy that defines different levels of data sensitivity (e.g., public, internal, confidential, restricted).

Security Controls Based on Classification: Security controls, including encryption key management, should be applied based on the data's classification level.

Cost-Benefit Analysis: Data classification helps organizations make informed decisions about where to invest in stronger security controls and where cost optimization is acceptable.

In conclusion, adjusting the configuration to use cloud-provider-managed keys for data classified as public is the most effective way to reduce costs while maintaining a strong security posture. It's a practical, risk-based approach that aligns with data classification principles and cost-benefit considerations, all of which are important concepts covered in the CASP+ exam objectives.

### NEW QUESTION # 517

A security team determines that the most significant risks within the pipeline are:

\* Unauthorized code changes

\* The current inability to perform independent verification of software modules Which of the following best addresses these concerns?

- A. Lightweight cryptography
- B. Non-repudiation
- C. Digital signatures
- D. Code signing

**Answer: D**

Explanation:

Unauthorized code changes and lack of independent verification are directly mitigated by code signing, which ensures that code is from a trusted source and has not been altered.

While digital signatures are part of code signing, the broader practice of code signing encompasses signature management, version integrity, and trusted sources.

Lightweight cryptography is irrelevant in this context; it's more about efficiency in constrained devices.

Non-repudiation is a benefit of digital signatures but doesn't directly solve the verification/integrity concerns alone.

From CAS-005 Guide, Domain 4: Security Architecture, Tools, and Technologies:

"Code signing ensures that the code has not been tampered with and originates from a trusted developer."

### NEW QUESTION # 518

A network security architect for an organization with a highly remote workforce implements an always-on VPN to meet business requirements. Which of the following best explains why the architect is using this approach?

- A. To allow access to directly connected print and scan resources
- B. To facilitate device authentication using on-premises directory services
- C. To authorize updates to change the PIN on a smart card
- D. To enable usability of locally attached removable storage

**Answer: B**

Explanation:

Always-on VPN ensures that devices connect automatically to the corporate network whenever they are online, allowing seamless access to internal resources and enabling authentication against on-premises directory services (such as Active Directory). This

supports centralized identity management, GPO enforcement, and compliance requirements. Options B, C, and D involve local or peripheral resources, which are unaffected by VPN state.

### NEW QUESTION # 519

• • • • •

As you know, the first-class quality always come with the first service. That is exactly what describe our CAS-005 exam materials. No only that our CAS-005 training guide can attract you for its best quality, but also you will be touched by the excellent service. If you have any question about our CAS-005 Learning Engine, our service will give you the most professional suggestion and help. And we work 24/7 online. So you can always find we are accompanying you.

**Practice CAS-005 Exam:** <https://www.pass4surecert.com/CompTIA/CAS-005-practice-exam-dumps.html>

This CompTIA CAS-005 certification exam is designed to validate a candidate's skills and knowledge, CompTIA CAS-005 Dump Collection Give us a chance also is give yourself a chance, you won't regret it, CompTIA CAS-005 Dump Collection Enjoy one-year free update, CompTIA CAS-005 Dump Collection After you have studied on our materials, your chance of succeed will be greater than others, If you have CompTIA CAS-005 certification, apparently, it can improve your competitiveness.

Guidelines for Group Policy, The camera will set the opposing lighting variable according to the choice you make, This CompTIA CAS-005 Certification Exam is designed to validate a candidate's skills and knowledge.

**CAS-005 Dump Collection – Latest updated Practice Exam Provider for CAS-005: CompTIA SecurityX Certification Exam**

Give us a chance also is give yourself a chance, you won't regret CAS-005 it, Enjoy one-year free update, After you have studied on our materials, your chance of succeed will be greater than others.

If you have CompTIA CAS-005 certification, apparently, it can improve your competitiveness.
