

# Latest Juniper JN0-452 Exam Guide, Valid JN0-452 Exam Fee

2026 Latest Actualtests4sure JN0-452 PDF Dumps and JN0-452 Exam Engine Free Share: [https://drive.google.com/open?id=1yohuxWhSf-k7\\_3LzYZ-UuzzsaexaOJAc](https://drive.google.com/open?id=1yohuxWhSf-k7_3LzYZ-UuzzsaexaOJAc)

There are three versions of our JN0-452 study materials so that you can choose the right version for your exam preparation. The test engine is a way of exam simulation that makes you feel the atmosphere of JN0-452 Real Exam. It brings great convenience for most IT workers because it allows candidates to practice JN0-452 exam prep anytime and anywhere as long as you download the JN0-452 dumps pdf.

The smartest way of getting high passing score in JN0-452 valid test is choosing latest and accurate certification learning materials. The up-to-date JN0-452 exam answers will save you from wasting much time and energy in the exam preparation. The content of our JN0-452 Dumps Torrent covers the key points of exam, which will improve your ability to solve the difficulties of JN0-452 real questions. Just add our exam dumps to your cart to get certification.

## Valid JN0-452 Exam Fee & JN0-452 Premium Exam

Try to have a positive mindset, keep your mind focused on what you have to do. Self-discipline is important if you want to become successful. Learn to reject temptations. As old saying goes, no pains no gains. Learning our JN0-452 study materials will help you calm down. What you have learned will finally pay off. It is never too late to learn. You still have the chance to obtain the JN0-452 certificate. What is more, many people have harvest happiness and success after passing the JN0-452 exam. Then you are available for various high salary jobs.

## Juniper Mist AI Wireless, Specialist (JNCIS-MistAI-Wireless) Sample Questions (Q81-Q86):

### NEW QUESTION # 81

You receive a Marvis Actions alert informing you that there is a non-compliant AP at one of your sites. What should you do to correct the problem?

- A. Replace the AP with the correct hardware model.
- B. Request an RM
- C. Disconnect the Rogue AP from your Ethernet switch.
- **D. Install the correct version of firmware on the AP.**

**Answer: D**

Explanation:

Reference: <https://www.mist.com/documentation/what-is-marvis-actions/>

### NEW QUESTION # 82

A helpdesk technician is unable to resolve an AP connectivity issue and decides to replace the faulty AP with a new one. The goal is to have the new AP adopt the exact same configuration as the old one, including its name, site assignment, and any device-level overrides, with minimal manual effort. What is the most efficient procedure in the Mist UI to accomplish this?

- A. Claim the new AP, assign it to the site, then manually copy all settings from the old AP's configuration page to the new AP's page.
- B. On the old AP's configuration page, select "Replace AP" from the Utilities menu and enter the claim code or MAC address of the new, unclaimed AP.
- C. Create a Device Profile from the old AP's configuration and apply it to the new AP after it has been claimed and assigned to the site.
- D. Delete the old AP from the dashboard, then claim the new AP using the same name as the old one.

**Answer: B**

### NEW QUESTION # 83

You are asked to clone your Juniper Mist primary site configuration to use for a new site being added. In this scenario, which two configuration objects will be copied? (Choose two.)

- A. the WLANs
- B. the RF templates
- C. the site location
- D. the Auto Firmware Upgrade settings

**Answer: B,D**

Explanation:

The Clone Site feature in the Juniper Mist dashboard is a powerful tool designed to streamline the deployment of new physical locations by duplicating the environmental and operational logic of an existing "gold standard" site. However, to avoid configuration conflicts (such as duplicate addresses) and to maintain the integrity of the hierarchy, Mist is selective about which objects are carried over during the cloning process.

According to Juniper Mist documentation, only the settings visible on the Site Configuration page are copied to the new site. This specifically includes:

\* Auto Firmware Upgrade settings (A): The specific versioning (Production vs. RC) and the weekly or daily maintenance windows defined for the site are preserved. This ensures that the new site follows the same lifecycle management policy as the primary site.

\* RF Templates (B): The radio resource management (RRM) profile assigned to the site is copied. This includes channel planning, bandwidth settings (20/40/80 MHz), and power level constraints tailored for that environment.

\* Other Site-Level Settings: This also includes Webhooks, Rogue/Honeypot AP detection rules, and Location Services settings.

Conversely, certain objects are explicitly not copied. The Site Location (C) and Site Name are excluded because each site must be geographically unique for accurate mapping and time zone calculation. WLANs (D) are also not copied through the Clone Site function; SSIDs are typically managed at the Organization level via WLAN Templates, which are then mapped to sites or site groups rather than being "hardcoded" into an individual site's local configuration. By cloning the site-specific parameters like RF templates and upgrade schedules, Mist allows administrators to rapidly scale their infrastructure while ensuring the core network access (WLANs) is maintained through the overarching organizational policy.

### NEW QUESTION # 84

Mist WLAN objects are configurable at which two levels? (Choose two.)

- A. access point
- B. site group
- C. site
- D. organization

**Answer: A,C**

### NEW QUESTION # 85

You receive a Marvis Actions alert informing you that there is a non-compliant AP at one of your sites. What should you do to correct the problem?

- A. Install the correct version of firmware on the AP.
- B. Disconnect the Rogue AP from your Ethernet switch.
- C. Request an RMA.
- **D. Replace the AP with the correct hardware model.**

**Answer: D**

Explanation:

According to the Cisco Catalyst 9800 Series Wireless Controller Software Configuration Guide<sup>2</sup>, a non-compliant AP is an AP that has a different hardware model than what is expected by the cloud configuration.

This can happen when an AP is replaced with an incorrect model or when an AP is moved to a different site group that has a different hardware model requirement. The solution is to replace the AP with the correct hardware model.
