

# Test HP HPE7-A01 Lab Questions | Free HPE7-A01 Vce Dumps

2026 Latest TroytecDumps HPE7-A01 PDF Dumps and HPE7-A01 Exam Engine Free Share: [https://drive.google.com/open?id=1\\_1b4yY5VFYDsSwxb2\\_nBovkXOD17zuSn](https://drive.google.com/open?id=1_1b4yY5VFYDsSwxb2_nBovkXOD17zuSn)

Our HPE7-A01 guide torrent is compiled by experts and approved by the experienced professionals. They are revised and updated according to the change of the syllabus and the latest development situation in the theory and practice. The language is easy to be understood to make any learners have no learning obstacles and our HPE7-A01 study questions are suitable for any learners. The software boosts varied self-learning and self-assessment functions to check the results of the learning. The software can help the learners find the weak links and deal with them. Our HPE7-A01 Exam Torrent boosts timing function and the function to stimulate the exam. Our product sets the timer to stimulate the exam to adjust the speed and keep alert. Our HPE7-A01 study questions have simplified the complicated notions and add the instances, the stimulation and the diagrams to explain any hard-to-explain contents.

HP HPE7-A01 exam is considered an expert-level certification exam that covers a wide range of topics related to network access control and deployment. HPE7-A01 exam is designed to evaluate the candidate's knowledge in the areas of network design and implementation, wireless networking, network security, and troubleshooting. HPE7-A01 exam consists of 60 multiple-choice questions that candidates have to complete within 90 minutes.

Aruba, a Hewlett Packard Enterprise company, is a leading provider of secure wireless access solutions. Aruba's products and solutions are designed for enterprise-level networks, and the HPE7-A01 Certification Exam is a testament to an individual's expertise in Aruba's technologies. HPE7-A01 exam covers topics such as WLAN design and deployment, security, troubleshooting, and network management. The HPE7-A01 certification exam is an excellent way for individuals to demonstrate their skills and knowledge in Aruba's wireless access solutions.

## Free HPE7-A01 Vce Dumps & HPE7-A01 Reliable Test Materials

The service of HPE7-A01 test guide is very prominent. It always considers the needs of customers in the development process. There are three versions of our HPE7-A01 learning question, PDF, PC and APP. You can choose according to your needs. Of course, you can use the trial version of HPE7-A01 exam training in advance. After you use it, you will have a more profound

experience. You can choose your favorite our HPE7-A01 Study Materials version according to your feelings. I believe that you will be more inclined to choose a good service product, such as HPE7-A01 learning question

HPE7-A01 exam covers a range of topics related to Aruba networks, including network architecture, security, troubleshooting, and wireless technologies. HPE7-A01 Exam also covers the installation and configuration of Aruba devices, as well as the integration of Aruba products with other networking technologies. Candidates will be required to demonstrate their understanding of these concepts through a combination of multiple-choice and scenario-based questions.

## HP Aruba Certified Campus Access Professional Exam Sample Questions (Q110-Q115):

### NEW QUESTION # 110

A company recently upgraded its campus switching infrastructure with Aruba 6300 CX switches. They have implemented 802.1X authentication on edge ports where laptop and IoT devices typically connect. An administrator has noticed that for PoE devices the ports are delivering the maximum wattage instead of what the device actually needs. Upon connecting the IoT devices, the devices request their specific required wattage through information exchange.

- A. Create device profiles with the correct power definitions.
- B. Concerned about this waste of electricity, what should the administrator implement to solve this problem?
- C. Enable AAA authentication to exempt LLDP and/or CDP information.
- D. Globally enable the QoS trust setting for LLDP and/or CDP.
- E. Implement a classifier policy with the correct power definitions.

**Answer: A**

Explanation:

According to the Aruba Documentation Portal, the Aruba 6300 CX switches support various features to control the PoE devices on specific ports, such as device profiles and classifier policies. These features can help reduce the power consumption and improve the performance of the PoE devices.

### NEW QUESTION # 111

What is the best practice for handling voice traffic with dynamic segmentation on AOS-CX switches?

- A. Switch authentication and user-based tunneling of the voice traffic.
- B. Switch authentication and local forwarding of the voice traffic.
- C. Controller authentication and port-based tunneling of all traffic.
- D. Central authentication and port-based tunneling of the voice traffic.

**Answer: B**

Explanation:

This is the best practice for handling voice traffic with dynamic segmentation on AOS-CX switches. Dynamic segmentation is a feature that allows AOS-CX switches to tunnel user traffic to a controller or another switch based on user roles and policies. For voice traffic, it is recommended to use switch authentication and local forwarding, which means the voice devices are authenticated by the switch and their traffic is forwarded locally without tunneling. This reduces latency and jitter for voice traffic and improves voice quality. The other options are incorrect because they either use central authentication or tunneling, which are not optimal for voice traffic.

### NEW QUESTION # 112

With Aruba CX 6300, how do you configure IP address 10.10.10.1 for the interface in default state for interface 1/1/1?

- A. int 1/1/1. no switching. ip address 10.10.10.1/24
- B. int 1/1/1. switching. ip address 10.10.10.1/24
- C. int 1/1/1. ip address 10.10.10.1/24
- D. int 1/1/1. routing. ip address 10.10.10.1/24

**Answer: A**

Explanation:

To configure an IP address for an interface in default state for interface 1/1/1 on Aruba CX 6300 switch, you need to disable switching on the interface first with the command `no switching`. Then you can assign an IP address with the command `ip address`. The other options are incorrect because they either do not disable switching or use invalid keywords such as `switching` or `routing`.

#### NEW QUESTION # 113

Your manufacturing client is deploying two hundred wireless IP cameras and fifty headless scanners in their warehouse. These new devices do not support 802.1X authentication. How can HPE Aruba enhance security for these new IP cameras in this environment?

- A. Aruba ClearPass performs the 802.1X authentication and installs a certificate.
- **B. MPSK provides for each device in the WLAN to have its own unique pre-shared Key.**
- C. Use MPSK Local to automatically provide unique pre-shared Keys for devices.
- D. MPSK Local will allow the cameras to share a key and the scanners to share a different

**Answer: B**

Explanation:

MPSK stands for Multi Pre-Shared Key, and it is a feature that allows different devices to connect to the same SSID with different pre-shared keys. This improves the security and scalability of the network, as each device can have its own key and role without requiring 802.1X authentication or an external policy engine. MPSK can be configured either locally on the AP or centrally on Aruba Central.

#### NEW QUESTION # 114

In AOS 10, which session-based ACL below will only allow ping from any wired station to wireless clients but will not allow ping from wireless clients to wired stations? The wired host ingress traffic arrives on a trusted port.

- A. `ip access-list session pingFromWired any user any permit`
- **B. `ip access-list session pingFromWired any any svc-icmp deny any user svc-icmp permit`**
- C. `ip access-list session pingFromWired any any svc-icmp permit user any svc-icmp deny`
- D. `ip access-list session pingFromWired user any svc-icmp deny any any svc-icmp permit`

**Answer: B**

Explanation:

A session-based ACL is applied to traffic entering or leaving a port or VLAN based on the direction of the session initiation. To allow ping from any wired station to wireless clients but not vice versa, a session-based ACL should be used to deny `icmp echo` traffic from any source to any destination, and then permit `icmp echo-reply` traffic from any source to user destination. The user role represents wireless clients in AOS 10.
