Real4exams is an excellent IT certification examination information website. In Real4exams you can find exam tips and materials about Google certification Professional-Cloud-Network-Engineer exam. You can also free download part of examination questions and answers about Google Professional-Cloud-Network-Engineer in Real4exams. Real4exams will timely provide you free updates about Google Professional-Cloud-Network-Engineer exam materials. Besides, the exam materials we sold are to provide the answers. Our IT experts team will continue to take advantage of professional experience to come up with accurate and detailed exam practice questions to help you pass the exam. In short, we will provide you with everything you need about Google Certification Professional-Cloud-Network-Engineer Exam.

Our Professional-Cloud-Network-Engineer study materials provide free trial service for consumers. If you are interested in our Professional-Cloud-Network-Engineer study materials, and you can immediately download and experience our trial question bank for free. Through the trial you will have different learning experience on Professional-Cloud-Network-Engineer exam guide , you will find that what we say is not a lie, and you will immediately fall in love with our products. As a key to the success of your life, the benefits that our Professional-Cloud-Network-Engineer Study Materials can bring you are not measured by money. Professional-Cloud-Network-Engineer test torrent can help you pass the exam in the shortest time.

Valid Dumps Google Professional-Cloud-Network-Engineer Questions | Reliable Professional-Cloud-Network-Engineer Test Review

This is a Google Professional-Cloud-Network-Engineer practice exam software for Windows computers. This Professional-Cloud-Network-Engineer practice test will be similar to the actual Professional-Cloud-Network-Engineer exam. If user wish to test the Google Cloud Certified - Professional Cloud Network Engineer (Professional-Cloud-Network-Engineer) study material before joining Real4exams, they may do so with a free sample trial. This Professional-Cloud-Network-Engineer Exam simulation software can be readily installed on Windows-based computers and laptops. Since it is desktop-based Professional-Cloud-Network-Engineer practice exam software, it is not necessary to connect to the internet to use it.

Google Cloud Certified - Professional Cloud Network Engineer Sample Questions (Q183-Q188):

NEW QUESTION # 183
You are increasing your usage of Cloud VPN between on-premises and GCP, and you want to support more traffic than a single tunnel can handle. You want to increase the available bandwidth using Cloud VPN.
What should you do?

- A. Double the MTU on your on-premises VPN gateway from 1460 bytes to 2920 bytes.
- B. Add a second Cloud VPN gateway in a different region than the existing VPN gateway. Create a new tunnel on the second Cloud VPN gateway that forwards the same IP range, but points to the existing on-premises VPN gateway IP address.
- C. Add a second on-premises VPN gateway with a different public IP address. Create a second tunnel on the existing Cloud VPN gateway that forwards the same IP range, but points at the new on-premises gateway IP.
- D. Create two VPN tunnels on the same Cloud VPN gateway that point to the same destination VPN gateway IP address.

Answer: C

Explanation:
https://cloud.google.com/network-connectivity/docs/vpn/concepts/classic-topologies#redundancy-options

NEW QUESTION # 184
You are designing a Google Kubernetes Engine (GKE) cluster for your organization. The current cluster size is expected to host 10 nodes, with 20 Pods per node and 150 services. Because of the migration of new services over the next 2 years, there is a planned growth for 100 nodes, 200 Pods per node, and 1500 services. You want to use VPC-native clusters with alias IP ranges, while minimizing address consumption.
How should you design this topology?

- A. Create a subnet of size/28 with 2 secondary ranges of: /24 for Pods and /24 for Services. Create a VPC-native cluster and specify those ranges. When the services are ready to be deployed, resize the subnets.
- B. Use gcloud container clusters create [CLUSTER NAME] to create a VPC-native cluster.
- C. Use gcloud container clusters create [CLUSTER NAME]--enable-ip-alias to create a VPC-native cluster.
- D. Create a subnet of size/25 with 2 secondary ranges of: /17 for Pods and /21 for Services. Create a VPC-native cluster and specify those ranges.

Answer: A

NEW QUESTION # 185
You have an application that is running in a managed instance group. Your development team has released an updated instance template which contains a new feature which was not heavily tested. You want to minimize impact to users if there is a bug in the new template.
How should you update your instances?

- A. Manually patch some of the instances, and then perform a rolling restart on the instance group.
- B. Using the new instance template, perform a rolling update across all instances in the instance group. Verify the new feature once the rollout completes.
- C. Perform a canary update by starting a rolling update and specifying a target size for your instances to receive the new

template.
Verify the new feature on the canary instances, and then roll forward to the rest of the instances.

- D. Deploy a new instance group and canary the updated template in that group.
  Verify the new feature in the new canary instance group, and then update the original instance group.

Answer: D

Explanation:
https://cloud.google.com/compute/docs/instance-groups/creating-groups-of-managed-instances

NEW QUESTION # 186

You are responsible for designing a new connectivity solution between your organization's on-premises data center and your Google Cloud Virtual Private Cloud (VPC) network Currently, there Is no end-to-end connectivity. You must ensure a service level agreement (SLA) of 99.99% availability What should you do?

- A. Use two Dedicated Interconnect connections in a single metropolitan area. Configure one Cloud Router and enable global routing in the VPC.
- B. Use a Direct Peering connection between your on-premises data center and Google Cloud. Configure Classic VPN with two tunnels and one Cloud Router.
- C. Use HA VPN. Configure one tunnel from each Interface of the VPN gateway to connect to the corresponding interfaces on the peer gateway on-premises. Configure one Cloud Router and enable global routing in the VPC.
- D. Use one Dedicated Interconnect connection in a single metropolitan area. Configure one Cloud Router and enable global routing in the VPC.

Answer: B

NEW QUESTION # 187

Your organization is implementing a new security policy to control how firewall rules are applied to control flows between virtual machines (VMs). Using Google-recommended practices, you need to set up a firewall rule to enforce strict control of traffic between VM A and VM B.
You must ensure that communications flow only from VM A to VM B within the VPC, and no other communication paths are allowed. No other firewall rules exist in the VPC. Which firewall rule should you configure to allow only this communication path?

- A. Firewall rule direction: ingress
  Action: allow
  Target: VM B service account
  Source ranges: VM A service account
  Priority: 1000
- B. Firewall rule direction: ingress
  Action: allow
  Target: specific VM B tag
  Source ranges: VM A tag and VM A source IP address
  Priority: 1000
- C. Firewall rule direction: ingress
  Action: allow
  Target: specific VM A tag
  Source ranges: VM B tag and VM B source IP address
  Priority: 100
- D. Firewall rule direction: ingress
  Action: allow
  Target: VM A service account
  Source ranges: VM B service account and VM B source IP address
  Priority: 100

Answer: C

NEW QUESTION # 188
