Appropriately, we can wrap up this post with the way that the test centers around the material that is essential to handily clear your PECB Certified ISO/IEC 27001 Lead Auditor exam certification exam. You can trust the material and set aside an edge to zero in on those before you win eventually over the last PECB Certified ISO/IEC 27001 Lead Auditor exam (ISO-IEC-27001-Lead-Auditor) exam dates. To get it, find the source that assists you with getting the right test and spotlight on material agreeable for you for organizing the PECB Certified ISO/IEC 27001 Lead Auditor exam exam.

PECB ISO-IEC-27001-Lead-Auditor certification exam covers a wide range of topics related to information security management, including risk assessment, risk management, information security policies and procedures, and the implementation and maintenance of an ISMS based on the ISO/IEC 27001 standard. ISO-IEC-27001-Lead-Auditor exam is designed to test the candidate's understanding of these topics, as well as their ability to apply this knowledge in real-world scenarios.

To be eligible for the PECB ISO-IEC-27001-Lead-Auditor exam, candidates must have a minimum of five years of experience in information security management, with at least two years of experience in auditing. Additionally, candidates must have completed a PECB-recognized lead auditor training course or have equivalent knowledge. ISO-IEC-27001-Lead-Auditor exam consists of two parts: a written exam and a practical exam. The written exam is a three-hour closed-book exam consisting of 150 multiple-choice questions, while the practical exam is a two-hour closed-book exam consisting of four case studies that require candidates to apply their knowledge and skills in leading an ISMS audit team.

PECB ISO-IEC-27001-Lead-Auditor Certification Exam is a rigorous exam that requires candidates to demonstrate their ability to audit an organization's information security management system. Candidates are expected to have a thorough understanding of the ISO/IEC 27001 standard and be able to apply it to real-world scenarios. They must also be able to communicate effectively with stakeholders and make recommendations for improving the organization's information security management system.

Free PDF 2026 PECB ISO-IEC-27001-Lead-Auditor: Authoritative PECB Certified ISO/IEC 27001 Lead Auditor exam Practice Test

The price for ISO-IEC-27001-Lead-Auditor exam torrent is quite reasonable, you can afford it no matter you are a student or you are an employee in the company. You just need to spend some money, and you can get a certificate. In addition, ISO-IEC-27001-Lead-Auditor exam dumps are high-quality and accuracy, and you can pass the exam successfully by using them. We also pass guarantee and money back guarantee for your failure of the exam after using ISO-IEC-27001-Lead-Auditor Exam Dumps. We offer you free update for 365 days after purchasing, and the update version will be sent to your email address automatically.

PECB Certified ISO/IEC 27001 Lead Auditor exam Sample Questions (Q257-Q262):

NEW QUESTION # 257
You are an experienced ISMS audit team leader. During the conducting of a third-party surveillance audit, you decide to test your auditee's knowledge of ISO/IEC 27001's risk management requirements.
You ask her a series of questions to which the answer is either 'that is true' or 'that is false'. Which four of the following should she answer 'that is true'?

- A. Risk assessments should be undertaken following significant changes
- B. The initial phase in an organisation's risk management process should be information security risk assessment
- C. The organisation must produce a risk treatment plan for every business risk identified
- D. ISO/IEC 27001 provides an outline approach for the management of risk
- E. The results of risk assessments must be maintained
- F. Risk identification is used to determine the severity of an information security risk
- G. Risks assessments should be undertaken at monthly intervals
- H. The organisation must operate a risk treatment process to eliminate it's information security risks

Answer: A,C,D,E

Explanation:
Explanation
The following four statements are true according to ISO/IEC 27001's risk management requirements: 12
* The results of risk assessments must be maintained. This is true because clause 8.2.3 of ISO/IEC
27001:2022 requires the organisation to retain documented information of the information security risk assessment process and the results12
* ISO/IEC 27001 provides an outline approach for the management of risk. This is true because clause
6.1.2 of ISO/IEC 27001:2022 specifies the general steps for the information security risk management process, which include establishing the risk criteria, assessing the risks, treating the risks, and monitoring and reviewing the risks12
* The organisation must produce a risk treatment plan for every business risk identified. This is true because clause 6.1.3 of ISO/IEC 27001:2022 requires the organisation to produce a risk treatment plan that defines the actions to be taken to address the unacceptable risks, the responsibilities, the expected dates, and the resources required12
* Risk assessments should be undertaken following significant changes. This is true because clause 8.2.4 of ISO/IEC 27001:2022 requires the organisation to review and update the risk assessment at planned intervals or when significant changes occur12 The following four statements are false according to ISO/IEC 27001's risk management requirements:
* Risk identification is used to determine the severity of an information security risk. This is false because risk identification is used to identify the assets, threats, vulnerabilities, and existing controls that are relevant to the information security risk management process. The severity of an information security risk is determined by the risk analysis, which evaluates the likelihood and impact of the risk scenarios12
* The organisation must operate a risk treatment process to eliminate its information security risks. This is false because the organisation can choose from four options to treat its information security risks: avoid, transfer, mitigate, or accept. The organisation does not have to eliminate all its information security risks, but only those that are unacceptable according to its risk criteria12
* The initial phase in an organisation's risk management process should be information security risk assessment. This is false because

the initial phase in an organisation's risk management process should
* be establishing the risk management framework, which includes defining the risk management policy, objectives, scope, roles, responsibilities, and criteria. The information security risk assessment is the second phase in the risk management process12
* Risks assessments should be undertaken at monthly intervals. This is false because there is no fixed frequency for conducting risk assessments in ISO/IEC 27001. The organisation should determine the appropriate intervals for reviewing and updating the risk assessment based on its risk appetite, risk profile, and operational context12 References:

NEW QUESTION # 258
An audit team leader is planning a follow-up audit after the completion of a third-party surveillance audit earlier in the year. They have decided they will verify the nonconformities that require corrections before they move on to consider corrective actions. Based on the descriptions below, which four of the following are corrections for nonconformities identified at the surveillance?

- A. The organisation, having failed to maintain its Schedule of Applicability, re-allocated responsibility for its updating to the Technical Director
- B. Hard drive HD302 which had been colour-coded green (available for use) instead of red (to be destroyed) was removed from the system
- C. An incorrectly dated purchase order for a new network switch was rectified
- D. A software installation guide which had not been sent to the client along with their new system was posted out
- E. The documented process for product shipment, which did not reflect how this activity was conducted by the despatch team, was re-written and the team trained accordingly
- F. A signature missing from a client's contract for the supply of data services was added
- G. Scheduled management reviews, having been missed, were prioritised by the General Manager for holding on a specific date twice each following year
- H. Data centre staff not carrying out backups in accordance with specified procedures were retrained

Answer: B,C,D,F

Explanation:
According to the PECB Candidate Handbook for ISO/IEC 27001 Lead Auditor, a correction is an action to eliminate a detected nonconformity, such as rework, repair, or replacement1. The examples of A, B, C, and E are corrections because they fix the errors or defects that caused the nonconformities, such as a missing signature, a missing guide, a wrong date, or a wrong colour code. The other examples (D, F, G, and H) are not corrections, but corrective actions, because they address the root causes of the nonconformities, such as inadequate training, poor planning, ineffective documentation, or unclear responsibility2. Reference: 1: PECB Candidate Handbook for ISO/IEC 27001 Lead Auditor, page 35, section 4.5.12: PECB Candidate Handbook for ISO/IEC 27001 Lead Auditor, page 36, section 4.5.2.

NEW QUESTION # 259
You are performing an ISMS audit at a residential nursing home called ABC that provides healthcare services.
The next step in your audit plan is to verify the information security of ABC's healthcare mobile app development, support, and lifecycle process. During the audit, you learned the organisation outsourced the mobile app development to a professional software development organisation with CMMI Level 5, ITSM (ISO/IEC 20000-1), BCMS (ISO 22301) and ISMS (ISO/IEC 27001) certified.
The IT Manager presents the software security management procedure and summarises the process as follows:
The mobile app development shall adopt "security-by-design" and "security-by-default" principles, as a minimum. The following security functions for personal data protection shall be available:
Access control.
Personal data encryption, i.e., Advanced Encryption Standard (AES) algorithm, key lengths: 256 bits; and Personal data pseudonymization.
Vulnerability checked and no security backdoor
You sample the latest Mobile App Test report - Reference ID: 0098, details as follows:
You would like to investigate other areas further to collect more audit evidence. Select three options that will not be in your audit trail.

- A. Collect more evidence to verify the developer's CMMI Level 5, ITSM (ISO/IEC 20000-1), BCMS (ISO 22301) and ISMS (ISO/IEC 27001) certification. (Relevant to control A.5.21)
- B. Collect more evidence on how much residents' family members pay to install ABC's healthcare mobile app. (Relevant to

- C. Collect more evidence on how the developer trains its product support personnel. (Relevant to clause 7.2)
- D. Collect more evidence on how the organisation performs testing of personal data handling. (Relevant to control A.5.34)
- E. Collect more evidence by downloading and testing the mobile app on your phone. (Relevant to control A.8.1)
- F. Collect more evidence on how the organisation manages information security in the selection of an external service provider. (Relevant to control A.5.19)
- G. Collect more evidence on the organisation's business continuity policy. (Relevant to control A.5.30)
- H. Collect more evidence to determine the number of users of ABC's healthcare mobile app. (relevant to clause 4.2)

Answer: A,B,H

Explanation:
The three options that will not be in your audit trail are A, C, and H. These options are either not relevant to the information security of ABC's healthcare mobile app development, support, and lifecycle process, or not within the scope of your audit. The amount of money that residents' family members pay to install the app (A) and the number of users of the app are not related to the information security aspects or objectives of the ISMS1. The verification of the developer's certifications (H) is not your responsibility as an ISMS auditor, as you should rely on the competence and impartiality of the certification bodies that issued them2. The other options are relevant and within the scope of your audit, as they relate to the security functions, testing, policies, and procedures of the mobile app development, support, and lifecycle process13. NEW QUESTION # 260
Which four of the following statements about audit reports are true?

- A. Audit reports should always be reviewed by the client, dated, and signed as 'accepted'
- B. Audit reports should include or refer to the audit plan
- C. Audit reports should only evidence nonconformity
- D. Audit reports should be produced by the audit team leader with input from the audit team
- E. Audit reports should be assumed suitable for general circulation unless they are specifically marked confidential
- F. Audit reports should be sent to the organisation's top management first because their contents could be embarrassing
- G. Audit reports that are no longer required can be destroyed as part of the organisation's general waste
- H. Audit reports should be produced within an agreed timescale

Answer: A,B,D,H

NEW QUESTION # 261
Below is Purpose of "Integrity", which is one of the Basic Components of Information Security

- A. the property of safeguarding the accuracy and completeness of assets.
- B. the property that information is not made available or disclosed to unauthorized individuals
- C. the property of being accessible and usable upon demand by an authorized entity.
- D. the property that information is not made available or disclosed to unauthorized individuals

Answer: A
