2026 Test CV0-004 Collection - Valid CompTIA Reliable CV0-004 Test Prep: CompTIA Cloud+ (2025)

PrepAwayTest is a professional website to specially provide training tools for IT certification exams and a good choice to help you pass CV0-004 exam,too. PrepAwayTest provide exam materials about CV0-004 certification exam for you to consolidate learning opportunities. PrepAwayTest will provide all the latest and accurate exam practice questions and answers for the staff to participate in CV0-004 Certification Exam.

CompTIA Cloud+ (2025) Sample Questions (Q23-Q28):

NEW QUESTION # 23

A cloud administrator recently created three servers in the cloud. The goal was to create ACLs so the servers could not communicate with each other. The servers were configured with the following IP addresses:

	Server 1	Server 2	Server 3
IP address	172.16.12.7	172.16.12.14	172.16.13.4
Subnet mask	255.255.255.240	255.255.255.240	255.255.255.240
Default gateway	172.16.12.1	172.16.12.17	172.16.13.15

After implementing the ACLs, the administrator confirmed that some servers are still able to reach the other servers. Which of the following should the administrator change to prevent the servers from being on the same network?

- A. The IP address of Server 1 to 172.16.12.2
- B. The IP address of Server 2 to 172.16.12.18
- C. The IP address of Server 2 to 172.16.14.14
- D. The IP address of Server 1 to 172.16.12.36

Answer: C

Explanation:

- * The IP address of Server 1 to 172.16.12.36 (A): Changes the IP but remains within the same subnet range as Server 2.
- * The IP address of Server 1 to 172.16.12.2 (B): Also keeps Server 1 within the same subnet as Server 2.
- * The IP address of Server 2 to 172.16.12.18 (C): Falls within the next subnet range but does not isolate Server 2 completely.
- * The IP address of Server 2 to 172.16.14.14 (D): Moves Server 2 to a different subnet, preventing direct communication with Server 1 and Server 3.

Reference: CompTIA Cloud+ CV0-004 Study Guide, Objective 2.2: Configure access control lists (ACLs) and networking.

NEW QUESTION # 24

Which of the following best describes why a project manager would decide to sign a fixed-price contract with a vendor?

- A. The PM wants to simplify the logistics of the required product
- B. There are multiple requirements for the product
- C. The scope of the project deliverable is clearly defined
- D. There is a non-disclosure agreement in place

Answer: C

Explanation:

A fixed-price contract is suitable when the scope is well defined and stable. This shifts cost risk to the vendor, as they must deliver within the agreed-upon price. NDAs, requirements volume, or logistics do not determine contract type as strongly as scope clarity does.

Reference: CompTIA Project+ PK0-005 - Procurement & Contracts; CompTIA Cloud+ CV0-004 Governance, Risk & Compliance domain.

NEW QUESTION # 25

Which of the following best describes a benefit of the CI/CD process?

- A. Incremental changes are done at the end of the project
- B. Software delivery is sped up without compromising quality
- C. Updates are released every sprint
- D. The software is integrated with other projects easily

Answer: B

Explanation:

CI/CD (Continuous Integration/Continuous Deployment) allows faster and more reliable delivery by automating builds, tests, and deployments. It ensures rapid delivery without compromising quality. Updates are frequent but not necessarily tied to sprint cycles.

NEW QUESTION # 26

The performance of an e-commerce website decreases dramatically during random periods. The IT team is evaluating available resources to mitigate the situation. Which of the following is the best approach to effectively manage this scenario'?

- A. Migrating to a dedicated host
- B. Scheduling resource allocation
- C. Purchasing additional servers
- D. Configuring automatic elasticity

Answer: D

Explanation:

Configuring automatic elasticity is the best approach to manage an e-commerce website that experiences random performance drops due to variable traffic. Automatic elasticity enables the cloud resources to scale up or down automatically based on the current load, ensuring consistent performance even during unexpected traffic surges. References: The concept of automatic elasticity is part of the cloud management and technical operations content in the CompTIA Cloud+ curriculum.

NEW QUESTION # 27

Users have been reporting that a remotely hosted application is not accessible following a recent migration. However, the cloud administrator is able to access the application from the same site as the users. Which of the following should the administrator update?

- A. Permissions
- B. Routing table
- C. Network ACL
- D. Cipher suite

Answer: B

Explanation:

Since the cloud administrator can access the application from the same site but users cannot, it suggests a possible issue with the network routing. The routing table may need to be updated to ensure that traffic from the users' location is correctly directed to the new location of the remotely hosted application after the migration. Reference: CompTIA Network+ Certification Study Guide by Glen E. Clarke.

NEW QUESTION # 28

.....

Although the pass rate of our CV0-004 study materials can be said to be the best compared with that of other exam tests, our experts all are never satisfied with the current results because they know the truth that only through steady progress can our CV0-004 Preparation braindumps win a place in the field of exam question making forever. Therefore, buying our CV0-004 actual study guide will surprise you with high grades and you are more likely to get the certification easily.
