

AB-730 Übungsmaterialien & AB-730 realer Test & AB-730 Testvorbereitung

Gehen Sie einen entscheidenden Schritt weiter. Mit der Microsoft AB-730 Zertifizierung erhalten Sie einen Nachweis Ihrer besonderen Qualifikationen und eine Anerkennung für Ihr technisches Fachwissen. Microsoft bietet eine Reihe verschiedener AB-730 Zertifizierungsprogramme für professionelle Benutzer an. Untersuchungen haben gezeigt, dass zertifizierte Fachleute häufig mehr verdienen als ihre Kollegen ohne Zertifizierung.

Microsoft AB-730 Prüfungsplan:

Thema	Einzelheiten
Thema 1	<ul style="list-style-type: none">• Manage prompts and conversations by using AI: This domain focuses on creating effective prompts, managing and sharing them, handling chat conversations, and creating and configuring custom Copilot agents with appropriate settings and knowledge bases.
Thema 2	<ul style="list-style-type: none">• Draft and analyze business content by using AI: This domain covers creating documents from prompts or existing files, generating summaries, transferring data between apps, using Copilot for meetings and collaboration, and leveraging memory for personalized assistance.
Thema 3	<ul style="list-style-type: none">• Understand generative AI fundamentals: This domain covers Microsoft 365 Copilot's operation, data privacy, context influence on responses, chat versus agent experiences, and feature differences across apps. It addresses responsible AI practices including risk identification, verification methods, and data protection restrictions.

AB-730 Quizfragen Und Antworten & AB-730 Buch

Wenn Sie It-Prüfung wählen, versprechen wir Ihnen eine 100%-Pass-Garantie zur Microsoft AB-730 Zertifizierungsprüfung. Sonst erstatten wir Ihnen Ihre an uns geleisteten Zahlung.

Microsoft AI Business Professional AB-730 Prüfungsfragen mit Lösungen (Q41-Q46):

41. Frage

You use Microsoft 365 Copilot.

You need to delete all your conversations by using the least amount of effort.

What is the best approach to achieve the goal? More than one answer choice may achieve the goal. Select the BEST answer.

- A. the Settings app in Windows 11
- B. the Microsoft 365 Copilot desktop app

- C. the Microsoft 365 Copilot web app
- **D. the My Account portal in Microsoft 365**

Antwort: D

Begründung:

You can delete your conversations in a few simple ways through the Microsoft 365 Copilot web app and account settings.

*-> Deleting Your Entire Activity History

If you want a fresh start across all Microsoft 365 apps (Word, Excel, PowerPoint, etc.), you can clear your entire history at once:

1. Sign in to your Microsoft My Account portal with your work or school account.
2. Go to Settings & Privacy > Privacy > Data options.
3. Open the Copilot activity history section

Deleting Individual Conversations

1. Open the Web App: Navigate to the Microsoft 365 Copilot web app or copilot.microsoft.com
2. Locate Your History: Look for the "Chat" or "Conversations" list, typically found on the left-hand sidebar.
3. Delete the Chat:
4. Hover over the conversation you want to remove.
5. Click the three dots (...) (More options) next to the conversation title.
6. Select Delete and confirm your choice.

42. Frage

You are creating a custom analytics agent in the Microsoft 365 Copilot app. The agent will use Microsoft Excel files that contain sales data as knowledge.

You need to ensure that the agent can create visualizations, perform mathematical operations, create aggregations, and analyze the data in the files.

What should you add to the agent?

- A. image generator
- B. a suggested prompt
- C. a template
- **D. code interpreter**

Antwort: D

Begründung:

When building a custom analytics agent in Microsoft 365 Copilot that must process structured data from Excel files, advanced analytical capabilities are required. According to Microsoft AI Business Professional guidance, tasks such as performing mathematical calculations, generating aggregations, creating charts, and conducting structured data analysis require programmatic execution capabilities rather than simple text generation.

A code interpreter enables the agent to run Python-based analytical operations in a secure execution environment. This allows the agent to manipulate datasets, compute totals and averages, perform grouping and filtering, and generate visualizations such as bar charts or line graphs based on the Excel data. The interpreter bridges the gap between natural language instructions and executable analytical logic.

An image generator is designed for creative visual content and is unrelated to structured data analytics.

Suggested prompts and templates improve usability and consistency but do not provide computational or visualization capabilities. Therefore, to enable mathematical operations, aggregation, data analysis, and visualization of Excel sales data, the correct component to add to the agent is a code interpreter.

43. Frage

Hotspot Question

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Antwort:

Begründung:

□

44. Frage

Select the answer that correctly completes the sentence.

□

Antwort:

Begründung:

□
Explanation:

□ The correct completion is "cannot modify the settings of" because built-in agents such as the Researcher agent in Microsoft 365 Copilot are system-defined experiences. These agents are designed and managed by Microsoft to ensure consistent functionality, security, compliance, and alignment with responsible AI standards.

While users can interact with Researcher, provide prompts, and refine outputs during conversations, they cannot directly modify the core system settings or configuration of the built-in agent from Microsoft 365.

Administrative configuration and deeper customization are available when creating custom Copilot agents through approved development tools, but default Microsoft-provided agents have controlled configurations.

Options such as modifying agent instructions, adding prompts, or deleting suggested prompts imply direct structural customization of the built-in agent interface, which is not supported in the standard Microsoft 365 Copilot experience.

This reflects a key generative AI governance principle in enterprise environments: system-level controls remain centrally managed to maintain data protection, compliance, and responsible AI implementation across the organization.

45. Frage

Select the answer that correctly completes the sentence.

□

Antwort:

Begründung:

□
Explanation:

□ The Describe tab is where you leverage generative AI to help build an agent by describing what you want the agent to do in natural language. Instead of manually configuring everything first, you provide the agent's purpose, target users, tone, and the tasks it should perform (for example: "Create an onboarding agent that answers HR policy questions in a friendly tone and references SharePoint policies"). Copilot then uses that description to propose an initial agent setup—such as suggested behaviors, starter prompts, and structure—accelerating agent creation and improving consistency. By contrast, the Configure tab is typically used to fine-tune and finalize settings (such as knowledge sources, actions, and other parameters) after the agent concept is established. A Copilot notebook or Copilot page can help organize content and outputs, but they are not the primary place where generative AI "builds" the agent definition. Using the Describe tab reflects best practice: start with clear intent and constraints, then refine configuration for governance, accuracy, and usability.

46. Frage
