

HP HPE7-A03 Reliable Test Review, Dumps HPE7-A03 Cost

2025 Latest ExamDiscuss HPE7-A03 PDF Dumps and HPE7-A03 Exam Engine Free Share: https://drive.google.com/open?id=1rZfztNiUfFLtp9ehEVXxA_KILizx1sYo

As for buying HPE7-A03 exam materials online, some candidates may have the concern that if the personal information is safe or not. If you do have the same concern, you can try us. If you buy HPE7-A03 exam materials from us, we can ensure you that your personal information will be protected well. We respect the privacy of our customers, once the deal having finished, your personal information will be concealed. Furthermore, the HPE7-A03 Exam Materials have the questions and answers, and they will be enough for you to pass the exam. Pass guarantee and money back guarantee if you fail to pass the exam.

Our HP HPE7-A03 practice exam simulator mirrors the HPE7-A03 exam experience, so you know what to anticipate on HPE7-A03 certification exam day. Our Aruba Certified Campus Access Architect Exam (HPE7-A03) practice test software features various question styles and levels, so you can customize your HP HPE7-A03 exam questions preparation to meet your needs.

Dumps HP HPE7-A03 Cost - Valid Exam HPE7-A03 Braindumps

The HPE7-A03 training vce offered by ExamDiscuss will be the best tool for you to pass your actual test. The HPE7-A03 questions & answers are especially suitable for the candidates like you for the coming exam test. The contents of HP study dumps are edited by our experts who have rich experience, and easy for all of you to understand. So, with the skills and knowledge you get from HPE7-A03 practice pdf, you can 100% pass and get the certification you want.

HP HPE7-A03 Exam Syllabus Topics:

Topic	Details

Topic 1	<ul style="list-style-type: none"> Discover Requirements: This topic defines the goals and identifies the current environment and the objectives. Lastly, it also focuses on collecting information.
Topic 2	<ul style="list-style-type: none"> Architect the Solution: It measures your knowledge about identifying the solution options, designing high-level topologies, selecting the correct products, and determining the suitable overlay and underlay design. Additionally, the topic discusses how to verify that the design meets the original requirements.
Topic 3	<ul style="list-style-type: none"> Analyze Requirements: It focuses on determining possible high-level solutions. The topic also discusses mapping the needs into technical solutions and evaluating the proposed solution against project objectives and dependencies. Moreover, it also focuses on documenting assumptions.
Topic 4	<ul style="list-style-type: none"> Propose the Solution: The focal point of this topic is creating the design documentation and the final design. Moreover, the topic also focuses on presenting the solution.

HP Aruba Certified Campus Access Architect Exam Sample Questions (Q68-Q73):

NEW QUESTION # 68

A large multinational financial institution has contracted you to design a new full-stack wired and wireless network for their new 6-story regional office building. The bottom two floors of this facility will be retail space for a large banking branch. The upper floors will be carpeted office space for corporate users, each floor being approximately 100,000 sq ft (9290 sqm). Data centers are all off-site and will be out of scope for this project.

The customer is underserved by its existing L2-based network Infrastructure and would like to take advantage of modern best practices in the new design. The network should be fully resilient and fault-tolerant, with dynamic segmentation at the edge.

The retail space will include public guest Wi-Fi access. Retail associates will have corporate tablets for customer service, and there will be a mix of wired and wireless devices throughout the retail floors. The corporate users will primarily use wireless for connectivity, but several wired clients, printers, and hard VoIP phones will be in use.

The customer is also planning on renovating the corporate office space in order to take advantage of 'smart office' technology. These improvements will drive blue-dot wayfinding, presence analytics, and other location-based services.

The client has decided that more critical switch stacks supporting Contact Center resources will need to support greater than 600W of CL4 PoE and have redundant power supplies. These stacks will have approximately six members.

What would be the most economical choice Aruba switch series to meet these requirements?

- A. Aruba CX 6400
- B. Aruba CX6300F**
- C. Aruba CX6200M
- D. Aruba CX 6100

Answer: B

Explanation:

The Aruba CX 6300F Switch Series is well-suited for environments requiring high PoE power and redundancy in power supplies, especially for critical applications like supporting contact center resources. This series offers robust PoE capabilities, often exceeding 600W of Class 4 PoE power, making it ideal for powering multiple high-powered devices. Additionally, the Aruba CX 6300F supports stack configurations and redundant power supplies, ensuring high availability and reliability for critical network infrastructures. Its economical pricing, combined with high performance and reliability, makes it the most cost-effective choice for the client's requirements.

NEW QUESTION # 69

A global cruise line company needs to refresh its current fleet. They will refresh the insides' of the ship to be cost-effective and increase their sustainability. They will replace the complete WLAN/LAN hardware of the ship. In this refresh, the company will not refresh its current security requirements. The CIO also wants to limit the number of unused ports in the switches. Future expansion will always mean a refresh of hardware.

They start with the smallest ship with a maximum of 800 guests

Each ship has a LAN infrastructure consisting of two core switches, up to 10 redundant distribution switches, and up to 500 access switches (400 cabins, 100 technical rooms). The Core switches are located in the MDF of the ship and the distribution switches are located in the IDFs of the ship. Each cabin and technical room gets one single access switch.

The cabling structure of the ship will not be refreshed. Each IDF is connected to the MDF by SMF, of which two pairs are available for the interconnect between the core and distribution. The length of SM fiber between MDF and IDF is less than 300 meters (930 ft) and the type used is OS1. Each cabin is connected by a single OM2 pair to the IDF, the maximum length is 60 meters (200 ft). Each technical room is connected by a single OM2 pair to the IDF, with lengths between 100 and 150 meters (320 and 500 ft).

For each cabin/technical room the customer is looking to replace their current fan-less 2530/2540 without changing the requirements, except they need to upgrade the uplink to distribution switch to 10GbE to handle the increased network traffic, and the technical rooms need redundant power.

The WLAN infrastructure will be 1:1 refreshed without new cabling or new AP locations. Their WLAN Infrastructure is based on the 200/300 series Indoor and outdoor APs running instantOS (less than 300 APs). the customer has no change in WLAN requirements.

The cruise line company will replace its current Internet connection before the LAN/WLAN refresh. The new Internet connection will provide a 99.8% uptime, which is needed to ensure the paid guest Wi-Fi is always operational. With this new internet connection, the CIO of the cruise line wants to base the design on the ESP architecture from Aruba because Internet connection is guaranteed.

The week after the presentation of your design to the CIO of the cruise line company, the CIO calls you to discuss increasing the security of the wired network Infrastructure. Since one of their competitors had one of their cruise ships cyber hacked, the CSO of the cruise line has mandated increased security on the wired network. They have heard about dynamic segmentation and central and decentral overlay networks.

What would you advise as the most cost-efficient solution?

- A. Standardize on Aruba 6200 switches for the access layer, add a cluster of 9240 GWs. and Implement central overlay networks on UBT basis.
- B. Standardize on Aruba 6300 switches for the access layer, add a cluster of 9240 GWs. and Implement central overlay networks on UBT basis.
- C. Standardize on Aruba 6100 switches for the access layer, add a cluster of 9240 GWs. and Implement central overlay networks on UBT basis.
- D. Standardize on Aruba 6000 switches for the access layer, add a cluster of 9240 GWs. and Implement central overlay networks on UBT basis.

Answer: B

Explanation:

Given the need to increase the security of the wired network infrastructure while being cost-efficient, advising the cruise line company to standardize on Aruba 6300 switches for the access layer is the most appropriate solution. The Aruba 6300 Series offers advanced features suitable for such environments, including high-performance, scalability, and enhanced security capabilities. Adding a cluster of 9240 Gateways for implementing central overlay networks on a User-Based Tunneling (UBT) basis further strengthens the network's security posture. This setup supports dynamic segmentation, which allows for the enforcement of consistent policies and secure access across the network, irrespective of the user or device type. This architecture not only meets the increased security requirements set forth by the cruise line's CSO but also aligns with the company's existing infrastructure and future refresh plans, ensuring cost-efficiency and sustainability.

NEW QUESTION # 70

A large multinational financial institution has contracted you to design a new full-stack wired and wireless network for their new 6-story regional office building. The bottom two floors of this facility will be retail space for a large banking branch. The upper floors will be carpeted office space for corporate users, each floor being approximately 100,000 sq ft (9290 sqm). Data centers are all off site and will be out of scope for this project. The customer is underserved by its existing L2-based network infrastructure and would like to take advantage of modern best practices in the new design. The network should be fully resilient and fault-tolerant, with dynamic segmentation at the edge.

The retail space will include public guest Wi-Fi access. Retail associates will have corporate tablets for customer service, and there will be a mix of wired and wireless devices throughout the retail floors. The corporate users will primarily use wireless for connectivity, but several wired clients, printers, and hard VoIP phones will be in use.

The customer is also planning on renovating the corporate office space in order to take advantage of "smart office" technology. These improvements will drive blue-dot wayfinding, presence analytics, and other location-based services. The client has provided floorplans, wall density, and ceiling heights for the wireless deployment in the carpeted office space. What else will be needed to write an accurate bill of material? (Select two)

- A. PoE port details
- B. sprinkler details
- C. flooring information

- D. ceiling construction details

Answer: A,D

Explanation:

Ceiling construction details are essential for a wireless deployment because the material and structure of the ceiling can affect the propagation of wireless signals. Different materials can absorb or reflect RF signals differently, impacting coverage and signal strength. Understanding ceiling construction helps in planning the placement of access points for optimal coverage and performance. PoE (Power over Ethernet) port details are necessary to ensure that the wired network infrastructure can provide power to the access points and other PoE-enabled devices like VoIP phones and cameras. This information is critical for planning the power budget and ensuring that the network can support the power requirements of all connected devices, ensuring a stable and reliable network infrastructure.

NEW QUESTION # 71

The customer recently found out that Aruba OS-CX switches are capable of Application Recognition. What requirements should be fulfilled in order to do this? (Select two.)

- A. 6300F/M with Aruba CX Advanced License
- B. 6400 with Aruba CX Advanced License
- C. 8360 with Aruba CX Advanced License
- D. 6200F/M with Aruba CX Advanced License

Answer: A,B

NEW QUESTION # 72

ACME Retail has 38 locations spread out across five US states and two provinces in Canada. They are looking to grow 20% over the next two years. They have a head office (HO) with a staff of 200 employees.

The organization has eight regional managers and two VPs who work from home and on the road. Stores typically have 17 employees on average per location.

The two warehouses have a remote loading system and 20 employees each to load the trucks and fulfill the online orders. The warehouse has 40-foot ceilings and large metal racks to store inventory. The main warehouse is 240,000 sq ft (#22,300 sqm), and the Canadian warehouse is 130,000 sq ft (#12,100 sqm).

Forklifts on the loading docks are equipped with wireless tablets onboard.

A typical store is about 60,000 sq ft (#5,575 sqm), and smaller stores are planned at 25,000 sq ft (#2,320 sqm). The locations need to expand wireless access to vendors who set up displays or interactive kiosks.

The current infrastructure was installed in 2015 using wireless N technology in a coverage model. Wiring is Cat5, and fiber connections are uncertain. Inventory is placed directly on the floor when delivered.

Inventory control is handled through Zebra barcode scanners, but poor coverage and signal issues have made monthly inventory counts difficult.

The organization has a small help desk for store support and PC support for the office. The company plans to move away from the current PBX system later this year. They want to cut costs, move services to the cloud, and achieve real-time inventory control for online order fulfillment.

The network has been wired over the last 10 years, but new systems are trending wireless. They want to provide wireless access for employees, guests, vendors, and contractors. The new IT director will start next week, and the CTO has prioritized this project.

Additional context:

- * Marketing wants to interact with customers and collect more data.
- * The IT support desk needs to reduce staff by half.
- * The HO has an MDF and two IDFs (floors 1 and 2).
- * WAN circuits exist for HO.
- * Each store has a local Ethernet handoff from the cable provider in the office.
- * Budget is a concern, but the solution must last 7+ years.

Based on best practices and customer requirements, what is the correct WLAN approach?

- A. ArubaOS 10 AP and Gateway deployment
- B. ArubaOS 10 AP-only deployment
- C. InstantOS 8 deployment
- D. ArubaOS 8 Campus deployment

Answer: A

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

* Why ArubaOS 10 (AOS10):

- * ArubaOS 10 is the current next-generation WLAN architecture, designed for both campus and distributed branch deployments.
- * It supports cloud-native management via Aruba Central, aligning with ACME's move to the cloud.
- * Provides scalability for 7+ years, meeting the long-term investment requirement.
- * Supports Wi-Fi 6/6E APs, which are essential for high-density retail and warehouse environments.

* Why Gateways are Needed:

- * Gateway role is critical to support:

* Tunneled traffic for segmentation (guest, vendor, employee).

* Cloud Guest Authentication and captive portal functions for customers.

* Application visibility and role-based policy enforcement.

* Integration with SD-BRANCH WAN for resilience and cost control across remote stores.

* Gateways ensure the unified policy enforcement across all sites (head office, branches, warehouses, retail stores).

* Why Not the Other Options:

* B (InstantOS 8): Outdated architecture, limited to smaller standalone AP deployments, not recommended for enterprise growth or cloud-centric operations.

* C (AP-only AOS10): Provides Wi-Fi but lacks gateways, meaning no central policy enforcement, tunneling, or role-based segmentation. This would not meet ACME's requirements for guest/vendor access control, WAN resiliency, and security.

* D (ArubaOS 8 campus): Legacy controller-based solution, being phased out in favor of AOS10.

Does not align with cloud-first and future-ready requirements.

* Requirement Mapping to AOS10 AP + Gateway deployment:

* Real-time inventory & Zebra scanners # Reliable Wi-Fi 6E AP coverage with low latency.

* Cloud-based operations # Aruba Central + AOS10 integration.

* Guest, vendor, employee segmentation # Policy enforcement firewall and dynamic segmentation via gateway tunneling.

* Warehouses with high ceilings # Wi-Fi 6E APs with appropriate antenna design (AOS10 supports full AP portfolio).

* Cut IT staff in half # AI Insights and automation in Aruba Central reduce troubleshooting complexity.

* Marketing customer interaction # Cloud guest services and analytics integration with Aruba Central.

* 7+ year lifecycle # AOS10 architecture is future-proof and actively developed, unlike legacy OS8.

Final Justification:

The only solution that meets all customer requirements (cloud-based management, role-based segmentation, tunneling, guest/vendor access, real-time inventory, scalability, and 7+ years longevity) is an ArubaOS 10 AP and Gateway deployment.

NEW QUESTION # 73

.....

Here, we want to describe the HPE7-A03 PC test engine for all of you. HPE7-A03 PC test engine is suitable for all the windows system, which is very convenient to be installed. Besides, it does not need to install any assistant software. What's more, our HPE7-A03 PC test engine is virus-free and safe which can be installed on your device. With the HP HPE7-A03 simulate test, you can have a test just like you are in the real test environment. Dear, everyone, practice more frequently, you will success finally.
