HPE Hybrid Cloud Solutions Sample Questions (Q45-Q50):

NEW QUESTION # 45

Your customer needs a File & Print server that will maximize disk capacity. Fault Tolerance is not required. Which RAID Level should you recommend?

- A. RAID 1
- **B. RAID 0**
- C. RAID 5
- D. RAID 6

Answer: B

Explanation:

RAID 0 is the best choice for maximizing disk capacity because it stripes data across all the drives in the array, effectively combining their capacities into one larger, faster storage unit. Since RAID 0 does not provide any redundancy or fault tolerance, it uses 100% of the disk space for storage, making it the most efficient in terms of capacity utilization¹²³.

However, it's important to note that RAID 0 does not offer any protection against drive failures. If one drive fails, all data on the RAID 0 array could be lost. Therefore, while RAID 0 maximizes disk capacity, it should only be used when fault tolerance is not a concern, and data is backed up regularly or is non-critical

NEW QUESTION # 46

Drag and Drop Question
