NS0-901 Latest Exam Review, Valid NS0-901 Real Test

Our company has employed a lot of excellent experts and professors in the field in the past years, in order to design the best and most suitable NS0-901 study materials for all customers. More importantly, it is evident to all that the NS0-901 Study Materials from our company have a high quality, and we can make sure that the quality of our products will be higher than other study materials in the market.

Network Appliance NetApp Certified AI Expert Exam Sample Questions (Q46-Q51):

NEW QUESTION # 46

What is the primary role of NetApp Trident in a Kubernetes environment designed for AI workloads?

- A. To provide a web-based IDE, like Jupyter, for data scientists to develop models.
- B. To directly accelerate GPU computations using specialized drivers.
- C. To act as a dynamic storage orchestrator, provisioning persistent storage from NetApp backends on-demand for containerized applications.

- D. To function as a container runtime interface for executing AI models.

Answer: C

NEW QUESTION # 47

An organization's AI platform team needs to provide two distinct tiers of storage for their data scientists on a single Kubernetes cluster:

1. 'gold-tier': Extremely low-latency storage for active model training, using an all-flash NetApp ASA system.
 2. 'bronze-tier': Cost-effective, high-capacity storage for data staging and archiving, using a NetApp StorageGRID system.
- How should the platform team configure NetApp Trident to meet these requirements? (Select all that apply.)

- A. Create two distinct StorageClasses, 'gold-tier' and 'bronze-tier'.
- B. Create a single StorageClass named 'multi-tier-storage' that references both backends.
- C. Create a single Trident backend that points to both the ASA and StorageGRID systems simultaneously.
- D. Configure the 'gold-tier' StorageClass to reference the ASA backend.
- E. Create two separate Trident backend configurations, one for the ASA ('backend-asa.yaml') and one for StorageGRID ('backend-sgrid.yaml').
- F. Configure the 'bronze-tier' StorageClass to reference the StorageGRID backend.

Answer: A,D,E,F

NEW QUESTION # 48

An organization recently suffered a ransomware attack that encrypted several volumes on their primary ONTAP storage system, including a critical volume containing curated training data. The security team needs to implement a solution that can proactively detect and block ransomware-like file I/O patterns and automatically create a secure Snapshot copy before any damage is done.

The current ONTAP configuration is as follows:

ONTAP_Version: 9.12.1

Security_Features: SnapLock (Compliance Mode) on archive volumes

Anti-Virus_Scan: Enabled (Vscan)

Ransomware_Detection: Not configured

Which ONTAP feature should be enabled to provide this proactive, automated protection?

- A. Enable Multi-Admin Verification (MAV) on all volumes.
- B. Enable Autonomous Ransomware Protection (ARP).
- C. Increase the frequency of scheduled Snapshots.
- D. Use BlueXP backup and recovery to back up the volumes to the cloud more frequently.

Answer: B

NEW QUESTION # 49

An internal audit requires the firm to prove the exact state of the financial product documentation that was used by the chatbot to answer a specific query from last Tuesday. The query log shows the request was processed at '2025-07-11T14:30:00Z'. The data pipeline that updates the vector database runs daily at midnight.

Which NetApp technology allows the team to instantly access an immutable, point-in-time version of the vector database volume as it existed on that specific day?

- A. NetApp SnapMirror
- B. NetApp FlexClone
- C. NetApp FabricPool
- D. NetApp Snapshots

Answer: D

NEW QUESTION # 50

A university is building a shared AI research platform. They have two primary requirements:

1. Performance: A "hot" research area for active model training and development that requires the absolute lowest latency and

highest throughput to support multiple, simultaneous GPU- intensive jobs.

The data in this area is around 50 TB.

2. Capacity & Cost: A "cold" data lake to store over 5 PB of raw, unstructured experimental data that is infrequently accessed but must be retained for compliance and future use. This tier must be as cost-effective as possible.

Which combination of NetApp hardware and technologies should an architect select to build a complete, optimized, and cost-effective solution? (Select all that apply.)

- A. Implement NetApp FabricPool to automatically tier inactive data from the ASA system to the StorageGRID data lake.
- B. Use NetApp E-Series systems for both the hot tier and the cold data lake to simplify management.
- C. Use a NetApp All-SAN Array (ASA) system for the 50 TB high-performance "hot" research area.
- D. Enable GPUDirect Storage on the ASA system to provide the lowest latency data path to the GPUs.
- E. Use a standard 10GbE network for all connectivity to reduce costs.
- F. Use NetApp StorageGRID to build the 5 PB cost-effective data lake.

Answer: A,C,D,F
