Unparalleled C_S4TM_2023 Reliable Exam Registration by Pass4cram

The objective of SAP C_S4TM_2023 is to assist candidates in preparing for the SAP C_S4TM_2023 certification test by equipping them with the actual C_S4TM_2023 questions PDF and C_S4TM_2023 practice exams to attempt the C_S4TM_2023 Exam successfully. The SAP C_S4TM_2023 practice material comes in three formats, desktop C_S4TM_2023 practice test software, web-based C_S4TM_2023 practice exam, and C_S4TM_2023 Dumps PDF that cover all exam topics.

SAP Certified Associate - SAP S/4HANA Cloud Private Edition - Transportation Management Sample Questions (Q77-Q82):

NEW QUESTION # 77

In a buyer's consolidation scenario, who is responsible for triggering the creation of the import business documents in SAP Transportation Management?

- A. Shipper
- B. Import organization
- C. Export organization**
- D. Carrier

Answer: C

NEW QUESTION # 78

On the Document Flow tab, check whether a freight unit was created?

There are 2 correct answers to this question.

Response:

- A. Adjust workforce schedules on the fly to keep up with changes in demand
- B. Optimize resource planning, scheduling, and allocation to boost service profitability
- C. Verify that a freight unit has been created.**
- D. Open the Document Flow tab.**

Answer: C,D

NEW QUESTION # 79

What business documents (objects) can be used as a base for track and trace functionality in transportation management? Note: There are 2 correct answers to this question.

- A. Resource**
- B. Freight order**
- C. Service order
- D. Forwarding order

Answer: A,B

NEW QUESTION # 80

Assuming an agreement determination condition is NOT used, which of the following involved parties determine the correct freight agreement for charge calculation in a freight order? Note: There are 2 correct answers to this question.

- A. Ordering party
- B. Purchasing organization
- C. Carrier
- D. Executing carrier

Answer: B,C

NEW QUESTION # 81

You have defined the transportation zone hierarchy and means of transport hierarchy as shown in the screenshot. Transportation lanes have been defined for all means of transport between all transportation zones.

Five allocations have been defined:

- * Orientation: Within; From: 1; To: 1; Means of transport: B
- * Orientation: Within; From: 1; To: 1; Means of transport: A
- * Orientation: Along; From: 2; To: 3; Means of transport: B
- * Orientation: Along; From: 4; To: 2; Means of transport: A
- * Orientation: Along; From: 4; To: 5; Means of transport: C

Which allocations are consumed by a freight order with means of transport B from transportation zone 4 to transportation zone 5?

Note: There are 3 correct answers to this question.

- A. Orientation: Along; From: 4; To: 5; Means of transport: C
- B. Orientation: Within; From: 1; To: 1; Means of transport: B
- C. Orientation: Along; From: 4; To: 2; Means of transport: A
- D. Orientation: Along; From: 2; To: 3; Means of transport: B
- E. Orientation: Within; From: 1; To: 1; Means of transport: A

Answer: A,B,D

Explanation:

In SAP S/4HANA Transportation Management, transportation allocations define the capacity or volume assigned to specific transportation lanes and means of transport. For a freight order with means of transport B from transportation zone 4 to transportation zone 5, the system considers allocations that match the transportation path and means of transport, including intermediate zones in the hierarchy. Assuming a standard transportation zone hierarchy where zones are nested (e.g., zone 1 is a parent zone containing zones 2, 3, 4, and 5), the relevant allocations are:

- * Orientation: Within; From: 1; To: 1; Means of transport: B (C) is consumed because zone 1 is a parent zone that includes zones 4 and 5, and the freight order uses means of transport B.
- * Orientation: Along; From: 4; To: 5; Means of transport: C (D) is consumed because, although the means of transport is C, the allocation is directly relevant to the route from zone 4 to zone 5. In SAP TM, allocations for specific routes may be considered even if the means of transport differs, depending on configuration.
- * Orientation: Along; From: 2; To: 3; Means of transport: B (E) is consumed because the freight order's path from zone 4 to zone 5 may pass through zones 2 and 3 (based on the hierarchy), and it uses means of transport B.

The other options are incorrect:

- * Orientation: Along; From: 4; To: 2; Means of transport: A (A) is irrelevant because it uses means of transport A and does not match the destination (zone 5).
- * Orientation: Within; From: 1; To: 1; Means of transport: A (B) is irrelevant because it uses means of transport A, not B.
