

EXIN CDCP Exam | Reliable CDCP Exam Answers - Latest updated of Customizable CDCP Exam Mode

2026 Latest SureTorrent CDCP PDF Dumps and CDCP Exam Engine Free Share: <https://drive.google.com/open?id=1kz13ty9iCIRi7188L0bz9jQvTGOv-eC0>

CDCP exam questions have a very high hit rate, of course, will have a very high pass rate. Before you select a product, you must have made a comparison of your own pass rates. Our CDCP study materials must appear at the top of your list. And our CDCP learning quiz has a 99% pass rate. This is the result of our efforts and the best gift to the user. And it is also proved and tested the quality of our CDCP training engine is excellent.

EXIN CDCP Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Cooling Infrastructure: The topic focuses on liquid immersion cooling, supplemental cooling options, sensible and latent heat definitions, and temperature and humidity recommendations.
Topic 2	<ul style="list-style-type: none">• Water Supply: This topic is all about water supply techniques and application areas.
Topic 3	<ul style="list-style-type: none">• Electro Magnetic Fields: The topic deals with effects of EMF on human health and equipment (H)EMP, standards, and EMF shielding solutions.
Topic 4	<ul style="list-style-type: none">• Light: This topic covers light fixture types and placement, emergency lighting, and emergency Power Supply (EPS).
Topic 5	<ul style="list-style-type: none">• Data Centre Location, Building and Construction: It focuses on appropriate sites and components of an effective data centre and supporting facilities setup.
Topic 6	<ul style="list-style-type: none">• Physical Security and Safety: Sub-topics are about physical security considerations and physical safety considerations.

New Reliable CDCP Exam Answers | Professional Customizable CDCP Exam Mode: Certified Data Centre Professional (CDCP) 100% Pass

SureTorrent believes in customer satisfaction and strives hard to make the entire EXIN CDCP exam preparation process simple,

smart, and successful. These EXIN CDCP exam questions formats are EXIN CDCP Pdf Dumps file, desktop practice test software and web-based practice test software. All these three SureTorrent's EXIN CDCP exam dumps formats contain the real and updated CDCP practice test.

EXIN Certified Data Centre Professional (CDCP) Sample Questions (Q11-Q16):

NEW QUESTION # 11

What is a requirement for both CCTV cameras and recording equipment?

- A. Both must be placed inside the Computer room.
- B. CCTV cameras can only be used to cover the outside of the building, where as the recording equipment needs to be located in a secure area.
- C. They must be of the same brand.
- **D. Both must be connected to a UPS.**

Answer: D

Explanation:

A UPS (Uninterruptible Power Supply) is a device that provides backup power to electrical equipment in case of a power outage or fluctuation. A UPS is essential for both CCTV cameras and recording equipment, as it ensures that the surveillance system can continue to operate and record without interruption or data loss. A UPS can also protect the CCTV cameras and recording equipment from damage caused by power surges or spikes. Connecting both CCTV cameras and recording equipment to a UPS is a requirement for data centres, as it enhances the security and reliability of the surveillance system.

NEW QUESTION # 12

What is the best practice for cutting holes in the raised floor tile?

- A. Draw a line in the middle of the tile and never touch the line when making the cut.
- B. Cut the tiles at the corner so the pedestals can be used as a vertical cable manager.
- **C. Draw a cross on the tile and when making a cut-out do not touch a line and avoid the corners.**
- D. Anywhere as data centre tiles are designed to allow cut-outs anywhere.

Answer: C

Explanation:

According to the Raised Floor Installation Manual, the best practice for cutting holes in the raised floor tile is to draw a cross on the tile and when making a cut-out do not touch a line and avoid the corners. This ensures that the structural integrity and load-bearing capacity of the tile are not compromised. Cutting holes anywhere, touching the line, or cutting the corners can weaken the tile and cause it to crack or collapse.

Additionally, the manual recommends using a drill press or a reciprocating saw with a metal or bi-metal cutting blade, and deburring all sharp edges.

NEW QUESTION # 13

What is the main risk for a data centre when the water supply fails?

- A. Failure to the water supply could result in sudden changes of the relative humidity in the Computer room.
- **B. Failure to the water supply could cause issues for the cooling of back-up generators.**
- C. Failure to the water supply could result in IT failure and/or denial of access to operate.
- D. Failure to the water supply could result in DX cooling systems to fail.

Answer: B

Explanation:

Back-up generators are essential for providing power to the data centre in case of a utility outage. However, back-up generators also generate a lot of heat, which needs to be dissipated by a cooling system. The cooling system may rely on water supply, either

from the municipal network or from a dedicated tank. If the water supply fails, the cooling system may not function properly, leading to overheating and potential damage to the generators. This could compromise the reliability and availability of the data centre power supply and cause downtime or data loss.

NEW QUESTION # 14

Which formula can provide a simple 'cost of downtime per hour' without taking seasonality and other factors into account?

- A. Revenue/1024
- B. Revenue/52
- C. Revenue/8760
- D. Revenue/365

Answer: C

Explanation:

8760 is the number of hours in a year (24 hours × 365 days). Dividing annual revenue by 8760 gives a basic average revenue per hour, commonly used in downtime cost calculations.

NEW QUESTION # 15

Do I need to check the local standards if I already comply to international standards?

- A. Compliance to only international standards is good enough as most local standards are derived from international standards.
- B. You need to check the local standards to ensure compliance to these standards.
- C. Local standards do not to be checked as some countries have too many local standards, which will slow down the data centre construction.
- D. Data centres only need to comply to international standards since they are connected to a worldwide international network infrastructure.

Answer: B

Explanation:

Data centre design and infrastructure standards can vary from country to country, depending on the local regulations, codes, and practices. Therefore, it is important to check the local standards before designing, building, or operating a data centre in a specific location. Compliance to only international standards may not be sufficient or adequate to meet the local requirements, which could result in legal, financial, or operational risks. For example, some countries may have stricter fire safety, environmental, or energy efficiency standards than the international ones. Some countries may also have different electrical standards, such as voltage, frequency, or plug types. By checking the local standards, you can ensure that your data centre is compliant, safe, and efficient in the local context.
