NEW QUESTION # 33

What does the term "wisdom of production" mean?

- **A. The wisdom gained from something running in production**
- B. Monitoring and alert notifications from staging environments
- C. Taking an engineering-based approach to problems rather than just toiling at them repeatedly
- D. If a task can be automated then it should be automated

Answer: A

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

The term "wisdom of production" refers to the insights gained from real systems running under actual production conditions. Only production environments exhibit real user behavior, real workloads, true performance characteristics, and authentic failure modes. This concept is rooted in the SRE philosophy that production is the ultimate source of truth for understanding system behavior.

From the SRE Workbook, Chapter "Monitoring":

"Only production provides the full truth about how a system behaves under real workloads. Production is the ultimate source of wisdom about the system." This makes clear that wisdom gained from production is indispensable. Testing and staging environments cannot reproduce all real-world variables, usage patterns, and failure pathways.

Why the other options are incorrect:

- * A describes engineering approaches but does not define "wisdom of production."
- * C is incorrect because staging environments do not provide production wisdom.
- * D relates to automation strategy, not production insights.

Thus, the accurate meaning of the term is B - The wisdom gained from something running in production.
