## Exams-boost's Exam Questions Help You Get Microsoft GH-900 Certification with Ease

With the rapid development of our society, most of the people choose express delivery to save time. Our delivery speed is also highly praised by customers. Our GH-900 exam dumps won't let you wait for a long time. As long as you pay at our platform, we will deliver the relevant GH-900 test prep to your mailbox within 5-10 minutes. Our company attaches great importance to overall services, if there is any problem about the delivery of GH-900 Test Braindumps, please let us know, a message or an email will be available. And our GH-900 exam questions can help you pass the exam in the shortest time.

## Microsoft GitHub Foundations Sample Questions (Q30-Q35):

### NEW QUESTION # 30

In GitHub, why is it recommended to deploy from your feature branch before merging into the main branch?

- A. To avoid the need for testing changes in production
- B. To ensure the changes are verified and validated in a production environment**
- C. To directly deploy changes from the main branch without any intermediate testing
- D. To speed up the process of merging changes into the main branch

**Answer: B**

Explanation:

It is recommended to deploy from your feature branch before merging into the main branch to ensure the changes are verified and validated in a production environment. This practice helps in identifying any potential issues or bugs in a real-world scenario before the changes are permanently integrated into the main branch. By deploying from the feature branch, developers can catch and address issues early, reducing the risk of introducing bugs into the main branch, which is usually considered the stable branch.

### NEW QUESTION # 31

How can a user highlight a post to the top of the Discussions page?

- A. Star the discussion.
- B. Save the discussion.
- **C. Pin the discussion.**
- D. Create an issue from the discussion.

**Answer: C**

Explanation:

To highlight a post at the top of the Discussions page on GitHub, you can Pin the discussion. Pinning a discussion ensures it remains prominently visible at the top of the list, making it easier for others to find and participate in that discussion. This is particularly useful for important announcements or frequently referenced topics.

### NEW QUESTION # 32

What qualifier finds issues that mention a certain user?

- A. threads:
- B. Smentioned:
- C. mentioned:
- **D. mentions:**

**Answer: D**

Explanation:

The qualifier mentions: is used in GitHub's search functionality to find issues that mention a certain user. For example, if you want to find all issues where a specific user is mentioned, you would use mentions:username. This helps in tracking where a user has been involved in discussions across issues or pull requests.

### NEW QUESTION # 33

Which of the following is an Innersource development practice?

- A. Adopting open source code into the organization
- B. Removing open source code from the organization
- **C. Sharing code between teams within the organization**
- D. Making all repositories publicly accessible

**Answer: C**

Explanation:

Innersource is a development practice where an organization adopts open-source development methodologies within its own internal environment. The primary goal of innersource is to break down silos and encourage collaboration across different teams within the organization.

Sharing Code Between Teams:

Option B is correct because innersource involves sharing code between teams within the organization, similar to how open-source communities share code across the public domain. This practice fosters collaboration, improves code quality, and allows for reuse of code, reducing duplication of efforts.

Incorrect Options:

Option A is incorrect because adopting open-source code into the organization is related to using open-source software, not specifically to innersource practices.

Option C is incorrect because removing open-source code from the organization is contrary to the principles of both open source and innersource.

Option D is incorrect because making all repositories publicly accessible refers to open source, not innersource. Innersource typically involves keeping code internal to the organization.
