300-610 Reliable Dumps Questions | 300-610 Visual Cert Test

BTW, DOWNLOAD part of ValidBraindumps 300-610 dumps from Cloud Storage: https://drive.google.com/open?id=1m9yecDQZ6rB1Hu6vi1u-npiiL0Xqg6pp

First and foremost, the pass rate of our 300-610 training guide among our customers has reached as high as 98% to 100%, which marks the highest pass rate in the field, we are waiting for you to be the next beneficiary. Second, you can get our 300-610 practice test only in 5 to 10 minutes after payment, which enables you to devote yourself to study with our 300-610 Exam Questions as soon as possible. Last but not least, you will get the privilege to enjoy free renewal of our 300-610 preparation materials during the whole year. All of the staffs in our company wish you early success.

Other Study Options

For self-study, it is better to choose well-structured materials that ensure learning the topics one-by-one in a smooth manner. Amazon can also improve your learning with books like "How I Passed Designing Cisco Data Center Infrastructure Exam" by Rocismo Liolentz Publications. It is available in the form of Kindle edition and is focused on not just concepts of the exam but helpful test-taking tips and methodologies.

How the Exam Looks Like?

Cisco 300-610 follows a general pattern of Cisco's professional-level exams. It is 90 minutes long and consists of multiple-choice questions. It is deliverable via a testing center and online proctoring facility. The vendor hasn't revealed much on passing scores but it is known that it remains valid for three years. Anyone interested to enjoy the benefits after this period must complete the re-certification criteria.

The standard exam fee is $300 and would be paid in the form of an exam voucher. The test is available in the English language only. The registration process will be handled solely via Pearson VUE.

Updated 300-610 Reliable Dumps Questions Help You to Get Acquainted

with Real 300-610 Exam Simulation

Our Cisco 300-610 exam dumps give help to give you an idea about the actual Designing Cisco Data Center Infrastructure (300-610) exam. You can attempt multiple Designing Cisco Data Center Infrastructure (300-610) exam questions on the software to improve your performance. ValidBraindumps has many Designing Cisco Data Center Infrastructure (300-610) practice questions that reflect the pattern of the real Designing Cisco Data Center Infrastructure (300-610) exam. ValidBraindumps allows you to create a Designing Cisco Data Center Infrastructure (300-610) exam dumps according to your preparation. It is easy to create the Cisco 300-610 practice questions by following just a few simple steps. Our Designing Cisco Data Center Infrastructure (300-610) exam dumps are customizable based on the time and type of questions.

Passing the Cisco 300-610 Certification Exam is a great way for network architects, engineers, and designers to demonstrate their expertise in designing data center infrastructure. Designing Cisco Data Center Infrastructure certification can help professionals advance their careers and increase their earning potential. Additionally, earning the CCNP Data Center certification can open up new job opportunities and increase job security in the fast-paced world of data center networking.

Cisco Designing Cisco Data Center Infrastructure Sample Questions (Q203-Q208):

NEW QUESTION # 203
Which technology enables Layer 2 extension between remote data center sites?

- A. OTV
- B. FCIP
- C. GRE
- D. DMVPN

Answer: A

Explanation:
https://netcraftsmen.com/spanning-layer-2-between-data-centers/

NEW QUESTION # 204
An engineer must logically partition two Cisco Nexus 7000 Series Switches into two environments called Test_39919596 and Production_59423879. The environments must use only F2-Series line cards and be limited to a maximum of 265 port-channels. Which Cisco Nexus feature must be used?

- A. vFC
- B. vPC
- C. VDC
- D. VRF

Answer: D

NEW QUESTION # 205
Refer to the exhibit. The Cisco Nexus Series Switch with hostname Nexus1 is the default gateway for server A and server B. Both servers must have reachability to the internet, however, server A internet traffic must pass through the firewall for deep packet inspection. Also, the firewall must inspect any communication between server A and server B. Which solution must be applied to separate the data plane path for server A and server B?
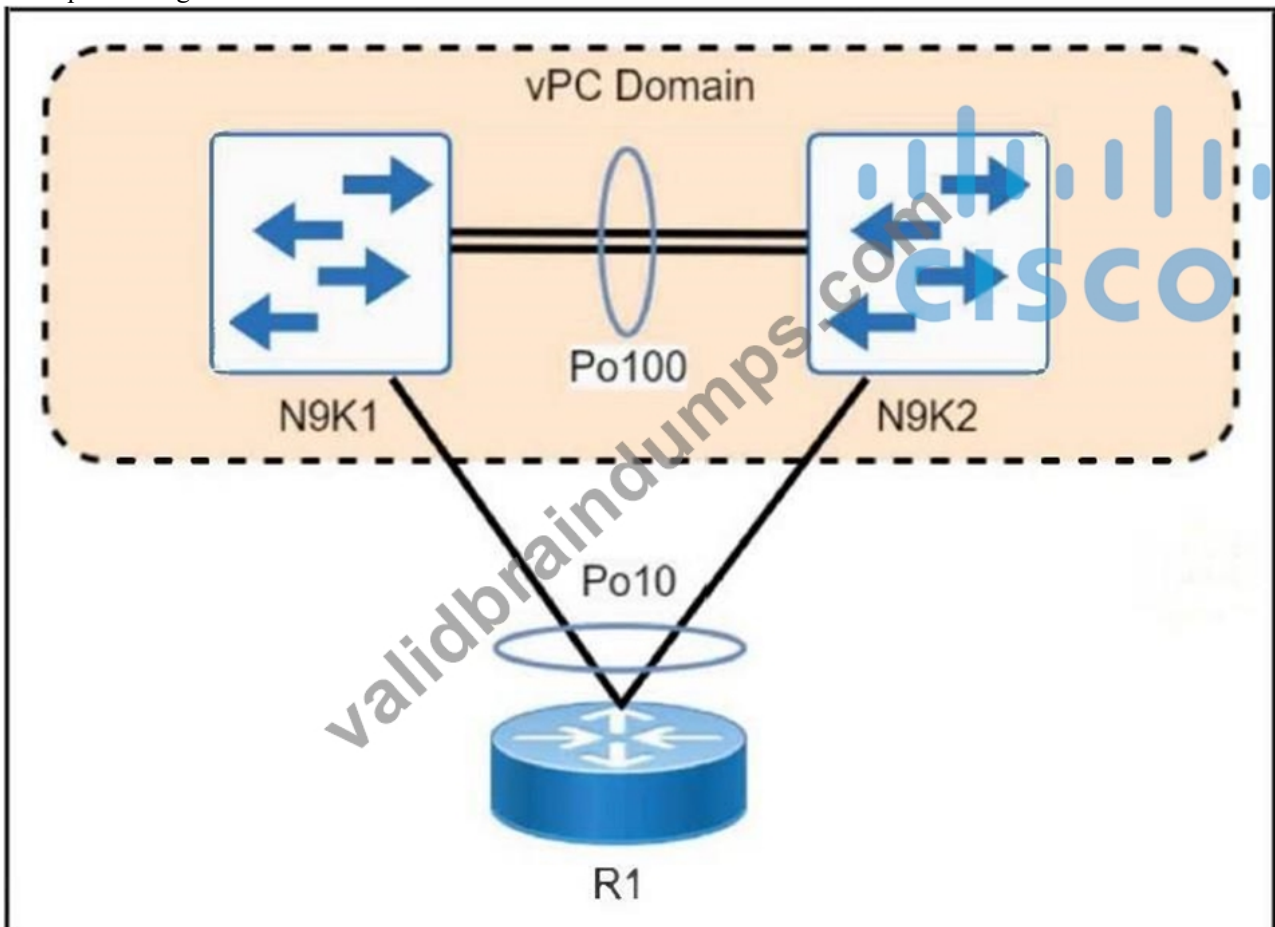

- A. VLAN
- B. VXLAN
- C. VDC
- D. VRF

Answer: D

NEW QUESTION # 206
Refer to the exhibit. Two Cisco Nexus 9000 Series Switches exchange OSPF routing information with R1. Which action accomplishes this goal?

- A. Add peer-gateway under VPC domain.
- B. Add layer3 peer-router under VPC interface link.
- C. Add layer3 peer-router under VPC domain.

- D. Add peer-gateway under VPC interface link.

Answer: C

Explanation:
Configuring layer3 peer-router at the vPC-domain level makes the two Nexus switches present themselves as a single OSPF neighbor to R1. This setting synchronizes ARP/adjacency state across the peer pair and allows a routed vPC EtherChannel (Po10) to form a proper OSPF adjacency without split-brain issues.

NEW QUESTION # 207
A network architect wants to automate data center LAN configuration by use of Kubernetes, aligned with Cisco best practices for underlay and overlay provisioning. The automation must be able to operate in high-availability mode with active/active operation between hosts in dual data centers. Which configuration approach must the architect choose?

- A. OpenFlow
- B. Cisco Nexus Dashboard Fabric Controller
- C. Cisco OpFlex
- D. APIC-EM CLI

Answer: B

Explanation:
The Nexus Dashboard Fabric Controller (formerly DCNM) provides a Kubernetes-integrated automation framework that natively orchestrates both underlay (BGP/IP-EVPN) and overlay (VXLAN) fabrics per Cisco best practices. It runs in active/active high-availability across sites, enabling hosts in dual data centers to be provisioned concurrently and consistently via Kubernetes CRDs without manual CLI scripting or legacy SDN protocols like OpenFlow.
