

# Interactive NSE7\_SSE\_AD-25 Questions & Exam NSE7\_SSE\_AD-25 Course

P.S. Free & New NSE7\_SSE\_AD-25 dumps are available on Google Drive shared by VerifiedDumps:  
<https://drive.google.com/open?id=1qfd1KVz4wDaAupgudLaHa7peeAFS39b3>

The VerifiedDumps team regularly updates the NSE7\_SSE\_AD-25 exam pdf format to make sure that applicants receive the most up-to-date Fortinet NSE7\_SSE\_AD-25 exam questions. Additionally, our NSE7\_SSE\_AD-25 PDF is designed to be user-friendly and accessible on any smart device, which means that students can prepare for the NSE7\_SSE\_AD-25 from anywhere, at any time.

In modern society, innovation is of great significance to the survival of a company. The new technology of the NSE7\_SSE\_AD-25 study materials is developing so fast. So the competitiveness among companies about the study materials is fierce. Luckily, our company masters the core technology of developing the NSE7\_SSE\_AD-25 study materials. No company in the field can surpass us. So we still hold the strong strength in the market. At present, our NSE7\_SSE\_AD-25 study materials have applied for many patents. We attach great importance on the protection of our intellectual property. What is more, our research center has formed a group of professional experts responsible for researching new technology of the NSE7\_SSE\_AD-25 Study Materials. The technology of the NSE7\_SSE\_AD-25 study materials will be innovated every once in a while. As you can see, we never stop innovating new version of the NSE7\_SSE\_AD-25 study materials. We really need your strong support.

**Useful Fortinet Interactive NSE7\_SSE\_AD-25 Questions - NSE7\_SSE\_AD-25**

## Free Download

VerifiedDumps facilitates you with three different formats of its NSE7\_SSE\_AD-25 exam study material. These NSE7\_SSE\_AD-25 exam dumps formats make it comfortable for every Fortinet NSE 7 - FortiSASE 25 Enterprise Administrator (NSE7\_SSE\_AD-25) test applicant to study according to his objectives. Users can download a free Fortinet NSE7\_SSE\_AD-25 demo to evaluate the formats of our NSE7\_SSE\_AD-25 practice exam material before purchasing.

## Fortinet NSE7\_SSE\_AD-25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>• SASE architecture and integration: This domain covers integrating FortiSASE into existing networks, identifying core SASE components, and evaluating their roles in advanced deployment scenarios.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>• Analytics: This section covers troubleshooting connectivity and endpoint issues, analyzing dashboards and logs, and reviewing reports related to user traffic and security events.</li></ul>
Topic 3	<ul style="list-style-type: none"><li>• SASE deployment and management: This section focuses on deploying and managing FortiSASE for branch and remote users, configuring advanced inspection features, and managing endpoint profiles and compliance rules.</li></ul>
Topic 4	<ul style="list-style-type: none"><li>• Secure Private Access (SPA): This domain includes designing SPA use cases, deploying SPA with SD-WAN, and implementing ZTNA with tagging rules and access proxy configurations.</li></ul>

## Fortinet NSE 7 - FortiSASE 25 Enterprise Administrator Sample Questions (Q23-Q28):

### NEW QUESTION # 23

A FortiSASE administrator is configuring a Secure Private Access (SPA) solution to share endpoint information with a corporate FortiGate.

Which three configuration actions will achieve this solution? (Choose three.)

- A. Add the FortiGate IP address in the secure private access configuration on FortiSASE.
- B. Register FortiGate and FortiSASE under the same FortiCloud account.
- C. Use the FortiClient EMS cloud connector on the corporate FortiGate to connect to FortiSASE
- D. Apply the FortiSASE zero trust network access (ZTNA) license on the corporate FortiGate.
- E. Authorize the corporate FortiGate on FortiSASE as a ZTNA access proxy.

**Answer: A,B,C**

Explanation:

To configure a Secure Private Access (SPA) solution to share endpoint information between FortiSASE and a corporate FortiGate, you need to take the following steps:

- \* Add the FortiGate IP address in the secure private access configuration on FortiSASE:
- \* This step allows FortiSASE to recognize and establish a connection with the corporate FortiGate.
- \* Use the FortiClient EMS cloud connector on the corporate FortiGate to connect to FortiSASE:
- \* The EMS (Endpoint Management Server) cloud connector facilitates the integration between FortiClient endpoints and FortiSASE, enabling seamless sharing of endpoint information.
- \* Register FortiGate and FortiSASE under the same FortiCloud account:
- \* By registering both FortiGate and FortiSASE under the same FortiCloud account, you ensure centralized management and synchronization of configurations and policies.

References:

FortiOS 7.6 Administration Guide: Provides details on configuring Secure Private Access and integrating with FortiGate.

FortiSASE 23.2 Documentation: Explains how to set up and manage connections between FortiSASE and corporate FortiGate.

### NEW QUESTION # 24

Refer to the exhibit.

□

Which type of information or actions are available to a FortiSASE administrator from the following output?  
(Choose one answer)

- A. Administrators can view latest application version available and push updates to managed endpoints.
- B. Administrators can view and configure automatic patching of endpoints, and first detected date for applications.
- **C. Administrators can view application details, such as vendor, version, and installation dates to identify unwanted or outdated software.**
- D. Administrators can view and configure endpoint profiles and ZTNA tags.

**Answer: C**

Explanation:

The provided exhibit (image\_57e69d.jpg) displays the Software Installations dashboard within the FortiSASE portal. This dashboard is a key component of the endpoint visibility and management features provided by the integrated FortiClient EMS functionality.

\* Visible Metadata: The output provides a granular list of all software detected on managed endpoints, including the application Name, the Vendor (e.g., Igor Pavlov, Microsoft Corporation, Adobe), the specific Version currently installed, and critical timestamps such as First Detected and Last Installed.

\* Administrative Utility: This information allows an administrator to audit the software environment effectively. By reviewing these details, they can identify unwanted software (PUA), shadow IT, or outdated software versions that may possess known vulnerabilities.

\* Actions Available: While the primary view is informational, the presence of the View Endpoints button (visible in the top-left) allows administrators to pivot from a specific application to a list of all individual devices where that software is present, facilitating targeted remediation.

\* Analysis of Incorrect Options:

\* Option A: While FortiSASE manages profiles and tags, this specific "Software Installations" view is focused purely on software inventory.

\* Option B: Although the "First Detected" date is visible, FortiSASE does not support "automatic patching" of third-party software directly from this inventory screen.

\* Option C: The dashboard shows what is installed, not the "latest available" version in the market, nor does it provide a mechanism to "push updates" to these third-party applications.

#### NEW QUESTION # 25

Which two advantages does FortiSASE bring to businesses with microbranch offices that have FortiAP deployed for unmanaged devices? (Choose two.)

- A. It uses zero trust network access (ZTNA) tags to perform device compliance checks.
- **B. It simplifies management and provisioning.**
- C. It eliminates the requirement for an on-premises firewall.
- **D. It secures internet access both on and off the network.**

**Answer: B,D**

Explanation:

FortiSASE extends secure internet access to users regardless of their location and streamlines the management and provisioning of security policies and services for microbranch offices with unmanaged devices.

#### NEW QUESTION # 26

A FortiSASE customer has been enforcing always-on VPN for their remote users running FortiClient. What option can be enabled under the customer's Endpoint Profile to allow them access different resources located in the same L2 network? (Choose one answer)

- A. Network Lockdown for endpoints with VPN enabled
- B. Endpoint Anti-Virus protection in the Endpoint Profile for VPN
- **C. Allow local LAN Access in the user Endpoint Profile before they get connected to the VPN**
- D. Endpoint Sandbox protection for VPN users

**Answer: C**

Explanation:

In a FortiSASE environment where always-on VPN is enforced, FortiClient typically establishes a full tunnel to a Security Point of Presence (PoP). By default, a full-tunnel configuration instructs the endpoint to send all traffic—including traffic destined for the local network—through the secure tunnel to FortiSASE for inspection.

\* The Local Access Challenge: When a remote user is at home or in a satellite office, they often need to access local resources such as printers, NAS devices, or other computers on the same Layer 2 (L2) broadcast domain. In a standard full-tunnel setup, these local resources become unreachable because the routing table on the endpoint prioritizes the VPN interface for all non-local-gateway traffic.

\* Allow Local LAN Access: To resolve this while maintaining the security of the "Always-On" requirement, FortiSASE administrators can enable the Allow Local LAN Access feature within the Endpoint Profile.

\* Configuration Logic: This setting modifies the FortiClient configuration (often via an XML update pushed from the FortiSASE EMS) to include an exemption for the endpoint's locally connected subnet.

Specifically, it ensures that traffic destined for the local L2 network does not enter the IPsec or SSL-VPN tunnel, allowing the user to interact with local peripherals while all other internet and corporate-bound traffic remains secured by FortiSASE.

\* Incorrect Options: \* Option B and C: Sandbox and Anti-Virus protections are security features for threat detection and do not influence the routing of local network traffic.

\* Option D: Network Lockdown actually does the opposite; it restricts network access until a VPN connection is established and typically blocks local LAN access unless specific exemptions are made, making it the incorrect choice for enabling access to local resources.

### NEW QUESTION # 27

Which two purposes is the dedicated IP address used for in a FortiSASE deployment? (Choose two.)

- A. For allocation and assignment of unique IP addresses to remote users
- B. For user access control to FortiSASE
- C. For isolation and identification
- D. For regulatory compliance

Answer: A,C

Explanation:

In FortiSASE, dedicated IP addresses are used to assign unique IPs to remote users, enabling precise traffic control, auditing, and user identification. They also support traffic isolation for enhanced security and policy enforcement.

### NEW QUESTION # 28

.....

If you want to advance in this fast-growing technological world, Fortinet NSE7\_SSE\_AD-25 certification is a must. Yet, the common problem the aspiring candidates undergo is seeking updated, authentic, and trustworthy Fortinet NSE7\_SSE\_AD-25 Dumps for the most cherished NSE7\_SSE\_AD-25 certification exam.
