Test SPLK-2002 Questions Fee | SPLK-2002 Latest Materials

Among global market, Splunk Enterprise Certified Architect guide question is not taking up such a large share with high reputation for nothing. And we are the leading practice materials in this dynamic market. To facilitate your review process, all questions and answers of our SPLK-2002 test question is closely related with the real exam by our experts who constantly keep the updating of products to ensure the accuracy of questions, so all SPLK-2002 guide question is 100 percent assured. We make SPLK-2002 exam prep from exam candidate perspective, and offer high quality practice materials with reasonable prices but various benefits. The more times you choose us, the more discounts you may get. To make your whole experience more comfortable, we also provide considerate whole package services once you make decisions of our SPLK-2002 Test Question. If you have any questions related to our SPLK-2002 exam prep, pose them and our employees will help you as soon as possible.

The SPLK-2002 exam is designed to test the candidate's ability to design and implement complex Splunk Enterprise deployments, including the architecture, deployment, and management of Splunk Enterprise instances, clusters, and applications. Candidates who Pass SPLK-2002 Exam will have demonstrated their expertise in designing, deploying, and managing enterprise-level Splunk deployments, making them valuable assets to any organization that relies on Splunk for their operational intelligence needs.

Splunk Enterprise Certified Architect Sample Questions (Q185-Q190):

NEW QUESTION # 185
Which of the following should be done when installing Enterprise Security on a Search Head Cluster? (Select all that apply.)

- A. Install Enterprise Security on a staging instance.
- B. Copy the Enterprise Security configurations to the deployer.
- C. Install Enterprise Security on the deployer.
- D. Use the deployer to deploy Enterprise Security to the cluster members.

Answer: C,D

Explanation:
Explanation
When installing Enterprise Security on a Search Head Cluster (SHC), the following steps should be done:
Install Enterprise Security on the deployer, and use the deployer to deploy Enterprise Security to the cluster members. Enterprise Security is a premium app that provides security analytics and monitoring capabilities for Splunk. Enterprise Security can be installed on a SHC by using the deployer, which is a standalone instance that distributes apps and other configurations to the SHC members. Enterprise Security should be installed on the deployer first, and then deployed to the cluster members using the splunk apply shcluster-bundle command. Enterprise Security should not be installed on a staging instance, because a staging instance is not part of the SHC deployment process. Enterprise Security configurations should not be copied to the deployer, because they are already included in the Enterprise Security app package.

NEW QUESTION # 186
Which of the following server. conf stanzas indicates the Indexer Discovery feature has not been fully configured (restart pending) on the Master Node?

- A. □
- B. □
- C. □
- D. □

Answer: C

Explanation:
The Indexer Discovery feature enables forwarders to dynamically connect to the available peer nodes in an indexer cluster. To use this feature, the manager node must be configured with the [indexer_discovery] stanza and a pass4SymmKey value. The forwarders must also be configured with the same pass4SymmKey value and the master_uri of the manager node. The pass4SymmKey value must be encrypted using the splunk _encrypt command. Therefore, option A indicates that the Indexer Discovery feature has not been fully configured on the manager node, because the pass4SymmKey value is not encrypted. The other options are not related to the Indexer Discovery feature. Option B shows the configuration of a forwarder that is part of an indexer cluster.
Option C shows the configuration of a manager node that is part of an indexer cluster. Option D shows an invalid configuration of the [indexer_discovery] stanza, because the pass4SymmKey value is not encrypted and does not match the forwarders' pass4SymmKey value12

NEW QUESTION # 187
Which command will permanently decommission a peer node operating in an indexer cluster?

- A. splunk decommission --enforce counts
- B. splunk stop -f
- C. splunk offline -f
- D. splunk offline --enforce-counts

Answer: D

NEW QUESTION # 188
What is a Splunk Job? (Select all that apply.)

- A. A child OS process manifested from the splunkd process.
- B. Searches that are subjected to some usage quota.
- C. A user-defined Splunk capability.
- D. A search process kicked off via a report or an alert.

Answer: C

NEW QUESTION # 189

When configuring a Splunk indexer cluster, what are the default values for replication and search factor?

- A. replication_factor = 2search_factor = 2
- B. replication_factor = 2search factor = 3
- C. replication_factor = 3search_factor = 2
- D. replication_factor = 3search factor = 3

Answer: C
