305-300 Study Tool - Latest 305-300 Learning Material

The LPIC-3 Exam 305: Virtualization and Containerization (305-300) Desktop-based practice Exam is ideal for applicants who don't have access to the internet all the time. You can use this 305-300 simulation software without an active internet connection. This 305-300 software runs only on Windows computers. Both practice tests of ExamBoosts i.e. web-based and desktop are customizable, mimic Lpi 305-300 Real Exam scenarios, provide results instantly, and help to overcome mistakes.

Lpi LPIC-3 Exam 305: Virtualization and Containerization Sample Questions (Q94-Q99):

NEW QUESTION # 94

What is the purpose of the kubelet service in Kubernetes?

- A. Run containers on the worker nodes according to the Kubernetes configuration.
- B. Manage permissions of users when interacting with the Kubernetes API.
- C. Store and replicate Kubernetes configuration data.
- D. Build a container image as specified in a Dockerfile.
- E. Provide a command line interface to manage Kubernetes.

Answer: A

NEW QUESTION # 95

Which of the following commands executes a command in a running LXC container?

- A. lxc-batch
- B. lxc-run
- C. lxc-enter
- D. lxc-attach
- E. lxc-eval

Answer: D

Explanation:

The command `lxc-attach` is used to execute a command in a running LXC container. It allows the user to start a process inside the container and attach to its standard input, output, and error streams¹. For example, the command `lxc-attach -n mycontainer -- ls -lh /home` will list all the files and directories in the `/home` directory of the container named `mycontainer1`. The other options are not valid LXC commands. The command `lxc-batch` does not exist. The command `lxc-run` is an alias for `lxc-start`, which is used to start a container, not to execute a command in it². The command `lxc-enter` is also an alias for `lxc-attach`, but it is deprecated and should not be used³. The command `lxc-eval` is also not a valid LXC command. References:

* 1: Executing a command inside a running LXC - Unix & Linux Stack Exchange.

* 2: `lxc-start`: start a container. - SysTutorials.

* 3: `lxc-attach`: start a process inside a running container. - SysTutorials.

NEW QUESTION # 96

What is the default provider of Vagrant?

- A. hyperv
- B. lxc
- C. virtualbox
- D. docker
- E. vmware_workstation

Answer: C

Explanation:

Vagrant is a tool that allows users to create and configure lightweight, reproducible, and portable development environments. Vagrant supports multiple providers, which are the backends that Vagrant uses to create and manage the virtual machines. By default, VirtualBox is the default provider for Vagrant.

VirtualBox is still the most accessible platform to use Vagrant: it is free, cross-platform, and has been supported by Vagrant for years. With VirtualBox as the default provider, it provides the lowest friction for new users to get started with Vagrant. However, users can also use other providers, such as VMware, Hyper-V, Docker, or LXC, depending on their preferences and needs. To use another provider, users must install it as a Vagrant plugin and specify it when running Vagrant commands. Users can also change the default provider by setting the `VAGRANT_DEFAULT_PROVIDER` environmental variable. References:

* Default Provider - Providers | Vagrant | HashiCorp Developer¹

* Providers | Vagrant | HashiCorp Developer²

* How To Set Default Vagrant Provider to Virtualbox³

NEW QUESTION # 97

Which of the following statements is true regarding the following output of `fdisk`:

Name	ID	Mem	VCPUs	State	Time (s)
Domain-0	0	1024	1	r-----	498.7
Debian	2	1024	1	--p---	783.5
Ubuntu	6	1024	1	-b-----	313.6
CentOS	7	2048	2	r-----	455.1

- A. The domain with ID 2 uses Para virtualization.
- B. It is necessary to use the xl command to change Ubuntu's state to running.
- C. CentOS is the domain which has consumed the most CPU time.
- D. Both Debian and Ubuntu require xl commands to start running.
- E. Ubuntu is idle or waiting for I/O.

Answer: E

NEW QUESTION # 98

Which of the following resources can be limited by libvirt for a KVM domain? (Choose two.)

- A. Amount of CPU time
- B. Number of available files
- C. Size of available memory
- D. File systems allowed in the domain
- E. Number of running processes

Answer: A,C

NEW QUESTION # 99
