- B. It helps reduce all sources of project complexity
- C. It adds layers of complexity through excessive automation
- **D. It helps reduce uncertainty and ambiguity associated with change initiatives**

Answer: D

Explanation:

Artificial Intelligence (AI) in PRINCE2 Agile is recognized as a tool that can assist in reducing uncertainty and ambiguity by providing data-driven insights, predictive analytics, and automation of routine tasks. The Progress Review Workshop is the key forum to assess the current status of the project and address challenges or issues affecting progress. It typically involves reviewing the current stage or release against plan, assessing risks, issues, and dependencies, and agreeing on corrective actions or decisions to keep the project on track.

While retrospectives (B and C) focus on reflecting and improving team practices, and team planning (A) looks ahead to upcoming work, progress reviews are focused on monitoring, control, and decision-making at the project or stage level.
